The Board considering it expedient for the preservation of the locks on the canal that a by-law be made to level a fine upon such persons who may wantonly or carelessly commit any injury or damage to them.

Resolved, That any person or persons on board any vessel, boat, scow, raft, or craft of any description, who shall at any time strike a pike, pole, or any other sharp instrument into the gates or sides of any lock, that the owner or master of the said vessel, boat, scow, raft, or craft, shall pay a fine of five shillings currency for every puncture or indenture so made, and that the lock keeper or any other person duly authorised by the Company be required to collect the same immediately.

A letter was read from Smith Ward requesting the Board to take the Stock he bought of John Clowes, upon which £91 5s., has been paid. Refused.

Ordered. That the wages due to the late, Capt. Oates, amounting to £3,15s,, be paid to his widow.

Mr. Barrett having decided respecting Hill's claim upon S. Ward and Hovey, the final settlement of their accounts together with £250 voted to them last Board, was referred to a Board to be held at York.

It appearing that £50 has been paid to John Ten-Broeck more than his estimates.

Resolved, That a statement of his account be laid before the Board next meeting, and the said £50 accounted for by the Agent.

Vanorman having been applied to for payment of his note of £31 11s. 3d-, for contingencies, (see minutes Sept. 7th,) he produced a bill against the Company, of £33 13s. 7d.

Resolved, As no items are mentioned in said bill it be not allowed.

ordered to be paid, but in future no allowance to be made for incidental expenses.

Ordered, That Mr. Phelps do not pay Vanalstine till he smooths off the banks, and that he be written to accordingly.

Read a notice from John Upper and others forbidding the Company turning a ditch or stopping up the water course passing through or near his premises. Not attended to.

Read a letter from N. Pauling, requesting his rent of mill privilege to commence from when the water is let into the Canal from the Chippawa, instead of from 1st July, 1828. Rejected.

6th November, 1827.

£256 G

At a Meeting of the Board held at St. Catharines,

The Hon. John H. Dunn, President, The Hon. Colonel Wells, Director.

Resolved, That the undermentioned advances be made at the recommendation of Mr. Merritt, viz.

To J. Gooding, on section 22,.....£25 J. Martindale, on Wainfleet Marsh,... 50

Resolved, That Mr. Merritt and Mr. Phelps be required to attend a meeting of the Board to be held at York, at such a time in this month as may be appointed

24th November, 1827.

At a Meeting of the Board of Directors, held at York.

#### PRESENT:

The Hon. John H. Dunn, President, Henry J. Boulton, Esq., Vice President.

The Hon. Colonel Wells, John B. Robinson, and D'Arcy Boulton, Esquires,

Directors.

Mr. Merritt and Mr. Phelps were in attendance os required last Board.

Read a letter from Mr. Phelps, dated 24th Nov., 1827, on which the Directors having deliberated, and having examined the Agent and Mr. Phelps and compared his general statement with the accounts of work done and the expenditure incurred, the Board

That on looking back on the proceedings of Mr. Phelps since the beginning of June, when he undertook the completion of the Deep Cut, they find that he has established a strong claim to the confidence of the Company from the result of his exertions. It appears that when he entered upon his contract there remained to be excavated on the Deep Cut 677,328 yards, of this he had excavated and removed 344,260 yards, leaving 333,068 yards, or about 1 of the whole Deep Cut to be yet completed. There has been paid to Mr. Phelps £20,349 and about £9,500 has been advanced to him in addition to enable him to bear the immediate charges of the great outfit necessary for so extensive an operation, and now at the conclusion of the season Mr. Phelps represents that £2000 more is required by him to enable him to discharge unsatisfied claims of laborers and others.

Upon this view of the present state of that most arduous portion of the Canal the Directors see reason for a well grounded confidence in its completion during the next season under Mr. Phelps' management, and they see no reason to mistrust his ability, prudence, or good faith. The Directors resolve to support him as long as they continue of this opinion with the necessary advances for proceeding in the work, and they therefore agree to make the advance desired by him of £2000 upon his executing a bond and warrant of Attorney to the Company for the amount.

It is however the express direction of the Board that no part of the £2000 shall be advanced until Mr. Phelps has perfected his security upon all his real and personal property to the satisfaction of the Solicitor of the Company, and the Agent is to see that the direction is strictly complied with and an inventory of the property as descriptive as circumstances will permit, and pointing out where it is at present deposited is to be forthwith furnished by Mr. Phelps to the Secretary of the Company.

### No. 7.

# RULES AND REGULATIONS FOR THE DEEP CUT.

1st. As profane language is highly offensive to God, and dishonorable to rational men it will be wholly discountenanced; and those who cannot bring themselves to dispense with it cannot be longer employed on this work.

2nd. As Sabbath Breaking is a great evil, and has an unhappy influence upon society generally, it is to be hoped that all persons engaged on the Deep Cut will feel disposed to reverence the Holy Sabbath, and as far as circumstances will admit give their attendance at the House of Worship; and in no case indulge themselves in drinking or tippling at

the groceries or taverns, on that day especially. Every person in the employ of the subscriber, let his religious tenets be as they may, shall be entitled to equal privileges and equal protection.

3rd. No quarrelling or wrangling will be admitted on any eccusion whatever; and every such offence will lesson the persons engaged in it, in the estimation of their employer, and however the first offence may be disposed of, a second will meet with a final discharge.

4th. It is the particular request of your employer, that every person as soon as he quits work at night, will put on suitable clothes to preserve health, and at an early hour retire to rest. No gambling will be countenanced; and those who cannot dispense with it must not expect the approbation of their employer, or to stay long on the work.

5th. A comfortable house will soon be erected for the worship of God, and some good ministers of the gospel will be engaged to preach every Subbath. A large and suitable house is already provided for the reception of the sick, where medical aid, with other necessary attendance, will be administered gratis to the labourers, and at the expense of their employers .- All those who comply with the four first articles, will be entitled to the privileges of the fifth.

As a further encouragement to the hands employed in completing the Deep Cut, the following advantages are afforded as a premium, to those who wish to make money themselves, and see this great work speedily completed :--

1st. The Deep Cut will be divided into as may sections as there may be machines—probably about fifty; each section will require from 12 to 15 shovellers, one overseer, and five or six teams.

2nd. Shovellers' regular wages will be \$12 per month; but should they average eleven yards per day, (after the earth is well ploughed up,) their wages will be increased to \$13; and an additional dol-lar per month will be paid for every extra yard of earth they may average per day;

3rd. It will be equally to the advantage of each teamster to render every assistance, by his industry and activity, and by placing his waggon or cart in the best position for the reception of the earth, and by every other assistance he may render, and every one complying with this article, and who is faithful in taking care of his team shall have his wages increased in exact proportion to that of the shovellers who had his waggon or cart.

4th. Every oversect who shall prove himself deserving the station he holds, by endeavouring to preserve peace and good order, and a uniformity of operation, so as to enable his men to be benefited by his good management, shall have his wages increased in exact proportion to the shovellers.

5th: As very much depends upon the skill and activity of the overseers of each company the following PREMIUMS will be paid at the close of the work among the overseers:

The Overseer that produces the greatest number of yards, according to the number of days shovelling during the whole job, shall be entitled to and receive a premium of One Hundred Dollars. Second best \$90: Third best \$80. Fourth do. \$70. Fifth do. \$60. Sixth do \$50. Seventh do. \$40. Eighth do. \$30. Ninth do. \$20. Tenth do. \$10. OLIVER PHELPS.

Deep Cut, 12th January, 1827.

No. 8.

# NOTICE TO LABOURERS.

WELLAND CANAL OFFICE, St. Catharines, June 20th, 1827.

It has been represented to the Directors, that many labourers professing the Roman Catholic religion; are deterred from working on the Canal through fear of ill usage from persons of other persuasions, this is therefore to give PUBLIC NOTICE, that the Contractors are required to use every lawful means in their power to prevent such conduct; and not only to dismiss those who may be guilty of violating the peace, but institute legal proceedings against the offending party without delay.

J. BLACK, Scoretary

to the Welland Canal Company.

No. 9.

APPLICATION TO QUARTER SESSIONS. WELLAND CANAL OFFICE, AND TOTAL

St. Catharines, June 20; 1827:

The Board of Directors of the Welland Canal Company have authorised me to make application to the Quarter Sessions for the appropriation of £50 per year for two years, out of the funds of the District, for each Bridge that may be constructed ou the public highway across the Canal—being 12 in number. I therefore transmit to you the enclosed Statement, in order that you may give the subject due consideration, and be prepared by the next July Sessions, to give your opinion of the same. cation to the Quarter Sessions for the appropriation

Twelve bridges will cost £1,200, the interest of The increased tax, by the erection of the Canal. 2170 0 mil

Leaving, a gain to the District of, per annum.

The Board have every reason to anticipate that a greater amount will be realized. However, so that no risque may be apprehended, and that there may be no possibility of an increase of taxation, they will engage to pay the District the interest on the money expended, until the increased rates in consequence of the operations of the Company exceeded the amount realized.

I am, Sir, am, Sir,
Your obedient servant,
W. H. MERRITT,
Agent, Welland Canal Company,

ESTIMATE of the probable increased Rates for the District of Niagara which will be created by the completion of the Welland Canal.

### ADDRESS TO STOCKHOLDERS.

[For this Address see appendix to Remarks for 1826, marked No. 12.]

### IN THE YEAR 1828.

By a reference to the report of last year it will be seen the Company had still on hand stock to the amount of £38,837 10s. and all the means then at their disposal was 19 per cent on 3,893 shares sold = £21,120 17 6 to complete a work still requiring £90,000. The situation of the Directors became still more embarassing. They had got so far on with the undertaking at this period, it was almost impossible to discontinue the work without immense loss. After mature consideration the Board determined to make another attempt in London. The moment it was decided on, the most prompt and efficient measures were adopted for carrying it into effect. The Agent repaired to England, obtained a loan of £50-000 on certain conditions, disposed of the entire stock, and returned in October.

The work was continued without interruption throughout the season, means having been provided through Mr. Yates who became responsible for advances to the amount of £10,000.

Notwithstanding the success in disposing of stock and obtaining means, this year closed under circumstances equally appalling, if not greater than at any former period. On the 35th October when the Engineers had, estimated that ten days work with

the force on hand would bring the waters of the Welland River through this formidable summit, slips occurred at the south end to such an extent as to induce the Engineers to recommend the discontinuance of the work. Application was made to obtain advice from those best qualified to give it. Mr. Geddes was sent for, and the Engineers were immediately sent up to the Grand River, with a view of obtaining a higher level, to pass over those slides, the removing of which was deemed impracticable in their present situation.

The Report of Mr. Geddes, No. 1.

The Report of Mr. Barrett, No. 2.

The General Report of the Company, No. 3.

Statement to Stockholders, No. 4.

Copy of a letter from Agent to Directors, No. 5.

And minutes of this year for general details, No. 6; all of which are appended hereto.

The increase over last year's estimate is shewn to be about £25,000, and although great apprehension existed, as to the result, the reports of the Engineers and Directors shew that the greatest injury sustained was in time. All concurring in opinion that it would make a far better canal—but as usual those casualties and disasters were magnified and made a subject of reproach.

It is also worthy of remark that up to this period the private stockholders had sustained all the loss and expense having paid the interest on both loan and stock to the Provincial Treasury.

The minutes will show the anxiety and difficulty of the Directors at this period.

### MR. GEDDES REPORT.

To the President & Directors of the Welland Canal Company.

The following Report is very respectfully presented:—

The disastrous slips at the Deep Cut present certainty of expense in attempting to remove them, and great uncertainty as to the successful operation of any remedy proposed. These considerations have suggested the expediency of supplying the Canal with water from the Grand River instead of the Chippawa.

Owing to the unfavorable surface over which a feeder from up the Grand River must pass, it results from the examinations and calculations made, that the cost of its construction would exceed \$200000—the most costly mile upwards of \$30,000.

The best plan that presents itself is to raise the Grand River by a dam. Seventeen miles of this River, which now rises and falls with Lake Erie, is to be brought up to the line of the highest mark to which the hurricanes on Lake Erie now raise it.—From this pond a supply for the Canal through to Lake Ontario, is to be drawn. This level, passing over Wainfleet Marsh, will continue across the Chippawa in an aqueduct, under which will be ample space for the Boats and Rafts moving on that stream the same level to be continued through to the north end of the Deep Cut, where this summit Pond will terminate.

As the Canal from Grand River northwards, is intended to supply water-works of different kinds, as well as Lockage water, it ought not to be a perfect level. A declivity of three quarters of an inch in a mile will, in a Canal with twenty-six feet bottom, eight feet depth, and fifty eight-feet surface, have a

medium current of thirty-seven feet twenty six hundredths per minute, and the area of the cross Section being three hundred and thirty six feet, the discharge in each minute will be 12. 519 ÷ cubic feet.*

The elevation will be seventeen feet above the surface of the River Welland, and the width of the surface of this sheet of water through the Deep Cut, will be one hundred feet.

The slope of the banks in this cut above the Towing path, having the steepness of forty five degrees, the rains will carry down such quantities of earth that a bottom only fifteen feet wide would have required very expensive annual scourings, the cost of which will be saved by this body of water receiving safely, for many ages, all that can be carried down. Farther, it will, without detriment, receive all the earth necessary to be removed in forming a Towing Path for this new level.

The soft substance at the bottom of the Deep Cut which was insufficient to support the superincumbent banks of clay, is doubtless an underlay to the Chippawa valley, and may extend beneath the Wainfleet Marsh, under the valley of Grand River.

Attempts to bore below the level of the bottom of the *Deep Cut* were made, and the substance found was a loose sand; and the difficulty of boring was such that the Auger was not made to penetrate more than eight feet below the level of said bottom.

A Well was dug at the north end of the straight line run for the Canal through the Wainfleet Marsh, fifty two feet deep, when the bottom was found so soft that it was penetrated with a pole to the depth of eighteen feet. An auger forty feet long was bored its whole length into the bottom of this Well; and at the depth of seventy six feet below the level of the Chippawa, no rock was found. A Well was dug near the north end of the Deep Cut, and in boring in its bottom to thirty three feet below the level of the Chippawa surface, there was found no rock. It thus appears that if not all, a large portion of the Niagara River might run down the 12 mile Creek, without the removal of any rock.

For seventeen miles up, the Grand River may be called an estuary operated upon by the motions of the Lake. Much of this level piece of water is bordered by a sedgy shore, where rotting vegetables are acted upon by the fluctuations of the Lake, and the beams of a hot sun; and from this decaying mass rises a vapour that makes the lower part of the Grand River valley unhealthy. Covering this amphibious description of shore with a body of water that will remain permanently upon it, will doubtless act with great effect in improving the health of this sickly region of country, and will be hailed with joy by those living at the Naval depot. The navigation will likewise be improved by making here a more spacious Harbor for vessels:

Artificial structures for keeping open the entrance from the Lake into rivers are much aided by the passage through them of large streams—an acvantage possessed by the Grand River. A dam however being put across the mouth of this river, there will be seasons when the stream will (during an active navigation and a full demand by the Mills) have

^{*} As calculated by Etolwein's Formula.

much of its water drawn through the Canal, leaving little to waste over the dam to operate in clearing out the sand from between the Piers, which are to be erected for securing a proper depth into the Lake.

To remedy this let the upper gates of the Lake-Lock be made nearly as deep as the Lock Chamber, with four or more large paddle gates for the purpose of letting out a temporary rush of water to carry off the effects of a severe long continued gale. That the water may act with greater effect the two Piers ought to be carried into the deep water of the Lake as nigh to each other as circumstances will allow.

Between the Grand River and the Chippawa there will be a *straight* line of Canal perhaps of fifteen or sixteen miles. Where is a piece of straight Canal so long?

The surface of the Canal water will be below the general surface of the great marsh, two feet, and act as a great discharging drain to cary off the issues of the several lateral drains that will be made for reclaiming the marsh.

Although the slips at the Deep Cut have been considered a great disaster, yet as they have been the means of leading to a plan of canal altogether preferable to the one that was prosecuting, the occurrence may be considered fortunate.

The Canal through the Deep Cut, will now be of great dimensions,—through which vessels will be towed rapidly with ease, and the washings from the banks will be harmless. But through the Deep Cut as it would have been (bottom only lifteen feet wide) vessels must have stopped in recesses while others were passing them, and the area of their cross sections approaching so near to that of the canal, their motion must have been extremely slow, without a great augmentation of the towing power. Then the expense of continued cleansing of the bottom must have been a serious item.

According to the estimates and calculations of Mr. Barrett, your principal Engineer, (which upon inspection appear to be correct) the cost of the two plans differ very little. But if a sum was taken the annual interest of which would defray the expense of clearing the bottom of the Deep Cut, in point of cost the balance would be in favor of the new one.

Mr. Barrett's plan of piers at the mouth of Grand River, appears on examination to combine strength with cheapness of execution. His plan of the Grand River Dam, to wit, a formation of brush, is doubtless the one that ought to be recommended for all localities of the like kind. Nature not having furnished a bottom, an artificial one must be made; and of the stability of such dams no doubt need be entertained.

As four millions of cubic fect of water can be retained in natural reservoirs south of the Deep Cut, at a small expense, two locks being made three feet extra height, a navigation through the canal, by way of the Chippawa and Niagara Rivers, may commence early next spring. The expedient may be adopted profitably to the Company, and with particular advantage as respects the preservation of the locks.

Submitted with great respect,

By your most obedient servant, JAMES GEDDES,

St. Catharines, 27th December, 1828. Engineer.

No. 2.

### Mr. BARRETT'S REPORT.

To the President and Directors of the Welland Canal Company.

Agreeably to the Directions received from the Board the 24th ult., I caused an examination of the bourom of the Deep Cut. The soft strata continue above our level the whole distance of forty chains, between the slips that have already occurred, and confirms the representation made by me when you were present. Last fall we bottomed several chains of the Deep Cut at the North end, and four chains at the South end; and from the nature of the earth no damage by the caving of the banks was apprehended. The first indication of the kind was in June last, at the South end, which was secured by a few piles,-at the same time I suggested the idea of bringing a feeder from the Grand River summit, if any further slips should occur. By endeavoring to sink a ditch to bring through the water of the River Welland to supply the Canal below the Deep Cut, we came to the soft substance 'alluded to. As soon as the nature of the soil we had to contend with was ascertained an immediate stop was put to the work until an examination of the country between the Grand River summit and this place, could be made. This I have done, and find the situation of the ground the whole way most favorable, and also a good position for crossing the Welland by an Aqueduct. On comparing the estimate of the expense of locking down into the Welland, making a towing path on that stream, and continuing the feeder to the Deep Cut, as suggested, with the cost of continuing the canal on the summit until it crosses to the North end of the Deep Cut, the difference is found so trifling that no doubt can be entertained but that the latter plan should be adopted. By it we incur no additional lockage from the original design, and have to supply only one summit with water instead of two, besides shortening the route.

After finishing this survey I went up to explore the Grand River, with a view of bringing a feeder from the Bear's Foot Rapids, (where Mr. Geddes had been making examinations) which would have removed all the material obstacles in the navigation of the Grand River, and extended all the advantages of a lateral canal fifty miles into the interior of the country. This project was abandoned from the great expense which would have been incurred—the estimate exceeding \$214,000. It was designed to carry a feeder (of the same dimensions of the Erie Canal) around the high bluffs which extend to the river at and near the head of still water. The main obstacle occurred in the very place we were led to believe there was none, from actual surveys heretofore taken, and reports made.

I take this opportunity of stating that there is no difficulty in making this stream navigable at a moderate expense on the plans laid down by Mr. Cusack and Mr. Lewis, by dams with locks of small lifts.

From all the examinations which have been made fully and with great care, it appears the idea I suggested in my report of last year of damming the mouth of the Grand River five feet, is the cheapest and best which can be resorted to.

As the public have imbihed a most erroneous opinion as to the effect which the late casualities at the Deep Cut were likely to produce, by increasing the expense of finishing the Canal, I submit the following statement of the expense of completing this work on the original plan, by entering the Welland, and the present plan in maintaining the summit from Marshville, (the point where the deviation commences) to the North end of the Deep Cut, and substituting the Grand River for a feeder instead of the Welland, which is the only alteration made.

Making a difference of \$ 1,072 60

All that is required to finish the Deep Cut to admit the passage of vessels between the Welland and Lake Ontario, is an expenditure of \$18,000, and can be accomplished by the first of next May. A sufficient supply of water can be collected in reservoirs above the Deep Cut, to supply the navigation until the water can be admitted from the Grand River. Thus no delay will be experienced in completing the Canal; it will be more spacious, subject to no casualty from caving, and will accelerate the passing of vessels through the Deep Cut.

To forward this work to the best advantage, the four locks at the Deep Cut, and the necessary excavation, should be put under contract immediately. The acqueduct over the Welland, the dam across the Grand River, the canal from the Deep Cut to Marshville, the cut of eleven chains at the mouth of the Welland, and the towing path from Niagara River to the Deep Cut-by the 31st of January next. And to insure an early supply of water from the Grand River, the contractors should be bound in the first instance to dig a feeder on the slope side of the Deep Cut to contain four feet depth of water, with twenty feet surface; the remainder of the canal can be widened to the proper dimensions hereafter with very little additional expense; and in the mean time it will answer every purpose for a boat navigation from the Grand River to the Deep Cut, and supply the Canal from the Welland to Ontario, with ample water for navigation and machinery.

properly belong to the Grand River Es- timate, will require	\$18,150

St. Catharines, Dec. 26., 1828.

### No. 3

### REPORT OF THE BOARD OF DIRECTORS FOR THE YEAR 1828.

When the Directors of the Welland Canal Company made their last Report, it was anticipated that the Deep Cut would be finished during the year 1828. Not more than 327,643 cubic yards of earth remained to be removed at the beginning of the season in order to complete this difficult portion of the work; and although almost incessant rains in the early part of the year retarded the operations of the Contractors very materially, yet from the average quantity of earth removed in each month, there was no room left to doubt that the means in use would have completed the Deep Cut before the commencement of the winter. In order to procure as speedily as possible the very gratifying result of bringing the waters of the River Welland through the Deep Cut into Lake Ontario, and to facilitate the removal of carth remaining in the Deep Cut, it was resolved in the latter part of the summer to carry down the excavation of a reduced width to the bottom level, through such parts as remained unfinished, and to accomplish this as soon as possible; by these means scows could be employed in removing the earth through that portion of the Canal which has long been completed, into the River Welland, where it could be so deposited as to assist in forming the tow path along the river. This mode of operation by scows had indeed been in use during the greater part of the season. Along the northern portion, and in the centre of the Deep Cut, the contractors had succeeded in completing their work very satisfactorily; and the whole wore a very promising appearance. On the first of October the smaller cut through the southern end of the Deep Cut, was commenced for the purpose above mentioned.

Along other parts of the line, from the Deep Cut to Lake Ontario, every necessary exertion had been used; the locks had been constructed, and many of them prepared for the reception of water : and every arrangement had been made to meet the object which it was expected would have been attained in a few weeks-the uniting the waters of Lakes Erie and Ontario by the valley of the 12 Mile Creek. But on the ninth day of November, at a time when not more than ten days or a fortnight's labor, with the force then employed, were required for sinking the ditch at the southern end of the Deep Cut to a sufficient depth, an accident occurred, by the slipping of a portion of the bank, which demonstrated the want of sufficient solidity in the stratum of earth at the extreme depth pear the southern end of the

 $P_4$ 

Deep Cut to support the sides, after the harder earth in the space between had been removed.

Similar difficulties have occurred in other works of this kind; and from the measures which had been taken in this instance to ascertain the difficulties likely to occur, and from the judgment which had been formed and expressed by the persons best qualified to judge, it seems that there is, and must be, in great undertakings of this description, a precariousness against which neither sagacity nor experience can always effectually guard. Other casualties of the same description with the first, and arising from the same causes, occurred soon afterwards; the season had become so far advanced that labor could not be applied with economy and advantage, and the recent accidents having compelled the Directors to abandon the hopes which they had entertained of effecting a passage for the water before the close of the year, it was thought judicious to direct the dismissal of the laborers and check further expenditure for the present on this part of the Canal.

The Directors visited and inspected the several slides which had occurred, a description of which will be found in the annual report of their engineer; and observations upon the spot produced the conviction that it would not be safe to ascribe the slipping of the earth, either to the degree of slope which had been given to the sides, or to the weight of earth which had been moved from the bottom and placed near the margin on the top. If the slides which have occurred could be ascribed on satisfactory grounds to either of these causes, then the expectation of surmounting the inconvenience, and providing against such accidents in future, could be more readily admitted. But the Directors having given their attention to the subject in all its bearings, were convinced of the expediency of meeting the present difficulty by adapting a change in the original plan which necessity seems to have suggested as the readiest means of surmounting the obstacle.

The annexed report of Mr. Barrett and Mr. Geddes will explain the alterations intended, and the advantages to be derived from them; and they will shew that with no material increase of expense, a better navigation will be procured than that which was originally contemplated. The plan of bringing down a feeder, (which would in fact have served the purposes of boat navigation) from the Bear's Foot Rapids in the Grand River so as to intersect the Canal, from Broad Creek through the Wainfleet marsh, was that which the Directors, from several considerations, were most inclined to favor; but a minute survey which has been made under their direction having proved that there were more formidable difficulties in the way than had been supposed to exist, it has in consequence been determined to erect a dam across the Grand River near the mouth, so asto obtain five feet additional height of water. By this method it will be seen that the Canal through the marsh will require much less excavation and be, on several accounts, better when completed, and the higher level of water, which by the proposed change will be brought to the navigation of the Welland will be preserved by being conducted across the river in an acqueduct, at a height that will leave the navigation of the river unobstructed; and from thence along the Welland until it flows into the Deep Cut, at such an elevation as will raise the Canal above all difficul-

ty to be apprehended from the unsound bottom of the Deep Cut at its present depth, and afford a spacious and deep channel for schooners, very much preferable to that which would have been obtained had the original design been completed.

The Directors have taken their measures to suit this proposed alteration. The judgment of their principal engineer, Mr. Barrett, with whose conduct and skill they continue to be perfectly satisfied, has been confirmed by that of Mr. Geddes, whose character and great experience induced the Directors to desire his suggestions and assistance under present circumstances. It is satisfactory to be able on good grounds, to anticipate that on the plan now proposed a navigation of the same description as was expected to be made, but in some points much to be preferred, will be obtained at no greater cost that would have been required to complete it according to the former design.

It will very probably be objected that if the alteration which accident seems to have suggested, does in truth possess so much to recommend it, the Company ought to have adopted it on account of its intrinsic merit, and before the expense had been incurred of excavating the Deep Cut to a depth that will not now be necessary. Every means had been adopted to obtain information—the route having been repeatedly examined by different engineers; and it is questionable whether the idea of conducting the higher level over the Wellrnd, and thence through the Deep Cut, would ever have occurred had the Canal been finished on the original plan.

The expense of removing the earth from the Deep Cut to a greater depth than would be necessary for the present plan, will by no means be wholly lost, as Mr. Geddes' report explains.

The Directors have determined upon constructing a towing path along the River Welland to its mouth and making a cut across the point into the N.agara River, which will make the navigation safe and convenient from Lake Erie through the Welland into the Deep Cut. These improvements will be immediately proceeded in. The Deep Cut, and the portion of the Canal below, will be completed without delay, and as a sufficient feeder may be brought from the Grand River into the Deep Cut, before the western section of the Canal can be completed for navigation by Schooners, it is expected that a navigation will be effected by the route of the Niagara and Welland Rivers through the Canal to Lake Ontario, in the early part of the next season, in the manner suggested at the conclusion of Mr. Geddes' report.

In the Engineer's estimate of last year, it was stated that the sum of £90,000 would probably finish the Canal. We have expended during the last season £60,000, and still require £54,662 to complete it for ship navigation throughout.

It appears from the different estimates which have been made with care by Mr. Barrett, and examined and confirmed by Mr. Geddes, that to finish the Deep Cut, make a towing path from thence to the Niagara River, and a cut to admit vessels from thence to the Welland, will require about £12,500. To make a dam across the Grand River, the acqueduct over the Welland, and bring a feeder with twenty feet surface and four feet depth of water from Grand River, will cost £12,500; or in other

words, to complete the navigation between Lakes Eric and Ontario by the Ningara River, and bring a supply of water from the Grand River, which will also afford a boat navigation, will cost in all £25,000.

The funds of the Company now amount to nearly as much as would cover the estimate of expenditure for the whole work on the above estimate of £54,662; but from the large sums we have to pay for interest of loans, contingencies, &c., the Directors do not feel that they would act prudently in undertaking to complete the whole line the present season for ship navigation, with their present means, although they are satisfied that it would be far more economical, and in every respect far more advantageous for the Company, than to delay it for another year.

In order to insure the completion of a navigation between the lakes early in the ensuing spring, the cheapest method is adopted in the first instance: the locks will be made of the proper dimensions, and the upper part of the Canal, being the section through the Wainfleet Marsh, can be afterwards enlarged according to the original intentions.

The capital stock of the Company is now disposed of. and His Majesty's Government has lent the Company £50,000 sterling, at four per cent interest.

The stockholders have paid in the whole amount of their subscriptions; and the Directors think it just to remark, that however great have been the difficulties surmounted in constructing so formidable an undertaking to its present advanced state, the whole pressure has been hitherto borne by the stockholders, since no aid has been granted by the Government, or by the Legislature for which the interest has not been punctually paid by the Company.

In looking forward to the early completion of the Welland Canal in a manner not prejudiced, and at an expense scarcely increased by the casualties which have occurred, the Directors feel warranted in anticipating benefits to the province and to the stockholders, which will amply recompense the expenditure incurred; but on this point every source of information is open to others as well as to the Directors.

No. 4.

STATEMENT TO STOCKHOLDERS RESI DENT IN ENGLAND.

### THE WELLAND CANAL.

A Company was incorporated in the year 1825 by an Acc of the Provincial Parliament of Upper Canada for the purpose of connecting Lakes. Erie and Ontario by a Canal of sufficient dimensions to admit the passage of vessels of 125 tons burden.— The Capital £200,000 Canada Currency, or £180,000 Sterling—is divided into 16,000 shares at £11 5s. each; of these shares 13,533 have been subscribed for, and 2,467 shares amounting to £27,753 15s. remain undisposed of.

The extreme length of this Canal is 41½ miles, of which only about 19 require entire excavation, the remainder being a natural navigation, caused by rivers and reservoirs.—The summit of Lake Eric is 330 feet above Ontario, and the ascent is surmounted by 37 Locks. There are two communications with Lake Eric, the one by Niagara, which will be finished by the 1st of November next, the other by the Grand River, which has been contracted for, and will be finished by the 1st of November 1829.

The extent of the country connected by this Canal, may be seen by reference to a Mup of North America. From Lake Eric there is an uninterruppted communication to Lakes St. Clair, Huron and Michigan, and the connexion with Lake Superior, at the Sault St. Marie, may be rendered navigable at a small expense; and although the trade of the country bor-dering on Lake Erie alone is a sufficient object for this Canal, its profits must eventually be increased by the navigation of the Lakes beyond, and the settle-ments upon those Lakes greatly advanced by the opening of this communication. A Canal from Lake Eric to the Ohio in the United States, will be finished next season, by which the produce of a great portion of the country bordering on Ohio and Mississippi Rivers will be conveyed to Lake Erie according to the statement of the Collector of Customs at Sandusky, (an American port on Lake Erie): the merchandize landed at that place alone last season, after passing through the American Eric Canal, amounted to \$1,319,823, from whence it was taken by land for the supply of the States, bordering on Ohio. What then may be expected when these waters are connected by a navigable communication?

When property is once affoat on Lake Erie, even if destined for the New York market, it will unquestionably pass through the Welland Canal and enter the American Canal at Oswego on Lake Ontario, in preference to entering it at Buffalo on Lake Erie; because there will not only be thereby saved 127 miles of Canal navigation in boats from Buffulo to Syracuse, but the distance upon Lake Erie will be shortened 48 miles, and from the accumulation of ice in the spring at the entrance of the Niegara River, the navigation by the Welland Canal will be opened a month earlier every year. However, there can be no doubt there will be, in a few years, from an extent of 50,000,000 acres of land, which is situated on Lake Erie, and the waters above it as much as both these channels can convey. The American Commissioners have already recommended making a luteral Canal, adjoining the eastern part of Erie Canal from Utica to Albany.

The River St. Lawrence which connects Lake Ontario with the occur is navigable for boats, between Prescott and Montreal, a distance of 130 miles although very difficult and tedious to ascend from the rapidity of the current.

The Rideau Canal, now in operation, and, intended to connect Lake Ontario with the St. Lawrence,

at or below Montreal, will avoid the obstructions in that part of the communication, besides being entirely within our own territory.

The St. Lawrence will soon be made navigable between Prescott and Montreal, for vessels drawing eight feet water, thereby connecting an extent of water equal to the whole extent of sea coast on the Atlantic ocean bordering on the United States.

When on Lake Ontario we have 194 feet lockage to the sea by the St. Lawrence, and 574 feet by the Hudson to New York; our natural advantages are apparent.

Ships of any moderate burden can approach Montreal; and a very great proportion of the exports of all those vast and fertile countries, both British and American, rapidly increasing in wealth and numbers will pass through this channel to the ocean.

Since the construction of the Eric Canal, the Americans have diverted almost the whole trade of the western country to the port of New York; the advantages they have gained by this communication will be seen by the following prices now paid for transportation per ton from the United Kingdom to Lake Eric.

#### BY THE ST. LAWRENCE.

London to Montreal Montreal to Prescott, river naviga-

Besides the difference of trans-shipments.

The political and commercial advantages which must result to the British Empire on the completion of the canals in Canada are great.

The St. Lawrence throughout its present navigable course is British, and consequently open to British ships only;—whatever exports or imports therefore are brought down or sent up through the British thanks in that colony must become freight for the employment of British seamen and tonnage.

The duties imposed by the United States on British merchandize are excessive, and on staple commodities, such as course cottons, iron, salt, &c., amount to a prohibition; those duties will be effectually counteracted by the ex at of frontier opened by means of these canals—and the consumption of all British manufactures, both in their territory and our own, greatly increased.

The same reasons which shew the great national advantages of the Welland Canal are sufficient to prove it a profitable investment of capital. This expectation is encouraged by the fact that the tolls on the American Canal amounted the first year after its opening in 1825, to 511,280 dollars; in 1826 to 750,000; in 1827 to 859,058; and their Northern Canal, which was made to divert the trade of Lake Chamlain from the St. Lawrence to the Hudson River, rather than from any expectation of profit, paid the first year after its completion 6 per cent upon the money expended.

It may be well to remark that before the Northern Canal was finished there were only twenty-two vessels employed on Lake Champlain; three years after its completion there were two hundred and eighteen; this increase must be chiefly attributed to the construction of this canal.

The profits of the Welland Canal are to be derived from the tolls to be regulated by the Company; with this provision, however, that they are never to divide more than 20 per cent profit upon the money expended, and that after fifty years if the profits shall not have been less than 12½ per cent per annum, the King may assume the whole canal upon paying to the Company the money subscribed, and 25 per cent in addition. The Company possess also by Royal grant 13,400 acres of valuable land, and have purchased 1000 acres more along the line of

the Canal. Its hydraulic situations also will be a source of considerable profit in a country where water power is so valuable.

The opinion entertained in America of this undertaking may be collected from the sums granted by the Colonial Legislatures for the purchase of shares, and still more from the large amount subscribed by foreign capitalists in New York, who could not have been induced so to advance their money from any other motive than a profitable return, and among whom the whole sum required could have been raised, but that it was thought expedient to secure a majority of shares to British holders.

To shew the opinion of such as are fully competent to decide on such matters—the following letter from two very eminent Engineers who have examined the subject is here inserted:—

"London, 18th May, 1828.

"SIR.

"We have, with much attention and interest, examined the documents you have laid before us relative to the Welland Canal now in progress in Upper Canada, and which is intended to connect Lakes Erie and Ontario by a ship navigation.

"With respect to the great importance of this undertaking, whether in a political or commercial view, and the advantages to that country likely to result from its completion, there can be but one opinion among persons who will thoroughly investigate the subject.

"The very great extent of ship navigation in the lakes above the Falls of Niagara, upon the same level, must always confine the carriage of the products of that country to vessels of considerable burden; for whenever this is practicable with few transshipments, no other mode of transport can compete with it.

"By your Welland Canal these productions are conveyed 120 miles nearer to their market, even if delivered at Oswego for New York, and 200 miles if intended for the St. Lawrence; and as this when the goods are once embarked, will be attended with little additional freight or insurance, it must be impossible for a canal, so far as it runs parallel with the lake, to compete with it.

"We are of opinion that you are perfectly justified in reckoning the advantage at the rate of 20s, per ton; and that you must necessarily have a good proportion of that trade which now passes from Lake Erie to New York.

"But as the improvement of the river St. Lawrence below Lake Ontario, will follow as a natural consequence of this measure (and in this we understand there is no material difficulty) so as to form an uninterrupted line of ship navigation to the ocean; from the superior facilities of that route the produce of the countries on the upper Lakes will ultimately fall into the natural outlet of the St. Lawrence, and the importation of the upper country will return in the same bottoms from the markets of Europe or the West Indies.

"What the extent of this trade may be in a country so rapidly advancing, cannot be conjectured by us, but there can be little doubt of its am-

ply reimbursing the subscribers for the outlay of their capital.

"From the plans and sections that have been submitted to us this canal seems to be very favorably circumstanced with respect to the ground through which it is cut; the inexhaustible reservoirs which supply it with water, and the very extensive mill power which will be established at its locks. The prolongation into Lake Erie, besides saving several miles of navigation, will avoid the serious obstruction caused by drift ice, at the head of the Niagara River, and thus have a material advantage over the New York Canal.

"THOMAS TELFORD, "ALEXANDER NIMMO.

"Wm. H. Merritt, Esq."

An office will be permanently established in London for the purpose of transferring shares and paying the dividends. The dividends upon all the shares now subscribed, or to be subscribed in the United Kingdom will be paid half yearly in London at par, so that whatever may be the difference of exchange between the two countries the loss or profit will belong to the Company, and not affect the holders of those shares.

Street, are the Company's Bankers in London, where subscriptions will be received, and the dividends hereafter paid as they arise.

Plans, Profiles, and Reports, shewing the present state of the undertaking, the Act of the Provincial Legislature, and the Powers of the Agent acting for the Company, as well as the documents necessary to establish the foregoing statements, remain with that firm to be exhibited to parties willing to become subscribers, and the Agent, Wm. Hamilton Merritt, Esq., 19 Bury Street, St. James's, will be ready at all times to give such further explanation as may be required.

No. 5.
WELLAND CANAL OFFICE,
St. Catharines, 27th Dec., 1828.

53,354 IB

To the Board of Directors of the Welland Canal Company.

GENTLEMEN,

The calculations on the surveys above the Welland was finished yesterday—and Mesrrs. Geddes & Barrett are this day making out their respective reports.

Q4

To construct a dam over the Grand River,	42,628	S0
	\$95,982	98
In addition to this it will require to finish the route to Fort Erie by the mouth of Chippawa,	15,000	00
Making,\$	100,983	00
To the entire estimate by Mr. Barrett's Report, You must add the completion of the hurbor	198,650 20,000	46 00
\$	218,650	46

By Mr. Black's statement of our available funds we have at our disposal £40,000 or thereabouts—and will require to complete the whole a further loan of £15,000—besides perhaps about £5000 more for contingencies, casualties, &c. &c.

or £54,662 12 6

The only question for our present consideration is whether we will make arrangements at once for completing the value Canal to Grand River by letting out every part of the work—or only such parts of it as will ensure us the navigation between the two lakes by the Niagara and Welland Rivers the ensuing season with our present means.

To accomplish the latter it is necessary to let out the making of Locks on Deep Cut, and the Canal about half a mile beyond it to embrace or include the reservoirs at once, and in any plan you may think necessary to adopt. I beg you will send me authority at once to let this part out on the estimate of our engineer—we have not a moment to lose, and you perceive it is necessary to be done in any case—it will give new zest to the work, and it shall be done by 1st June.

The remainder of the work—aqueduct, Canal to the Marsh, and Grand River Dam—should be advertised for contract by 19th of January—by that time the Engineers will have the work all laid out and specifications prepared—the only difference we should make if we intend finishing the whole would be including the Grand River Harbor or Piers—and in the other case to make the contractor carry through a ditch and let out the towing path down Chippawa and cut to Niagara River, as reported on by Mr. Barrett last year.

To make the Board perfectly understand this plan they will see by raising the dam at Grand River 5 feet we can dig a ditch 2 feet below this and draw a sufficient supply of water for the Canals from the Welland down to Ontario without interfering with the work materially.

My opinion is that we should let out the whole and run the risk of borrowing 20 or £25,000.

This sum can be made up in various ways—1st, by procuring an act this session and augmenting our capital to £350,000,—and if they would give us banking privileges for £50,000, the stock would be disposed of more readily; if not we can get Mr. Ellice to dispose of this stock in England by guaranteeing the interest for 5 years.

This I know he would do, and we can offer him the following security, (and probably Yates would do the same thing) viz: authorize him to dispose of £100,000 Stock, the interest on which will be £6000 per year—this money he should retain in his possession, or enough to cover the annual interest—we would only require \$100,000, or £25,000 more to finish the Canal, and the remainder would be applied to the payment of our debts.

After the Canal is finished, and time allowed us for building vessels or directing the trade of Lake Erie—there will be no further difficulty, as our credit will be established by, our receipt of tolls.

Another expedient may be adopted by borrowing on our lands in this country—for I still think if the Directors of our bank, the only monied institution in the province, were told that 12 or £15,000 would complete the canal, there is public spirit enough among them to lend us that sum on the security of our first tolls—and hydraulic privileges, together with the land we possess.

At all events one of the two methods must be adopted. If you decide on letting out the whole the following resolutions will be necessary.

1st. In order to open the navigation between Lakes Eric and Ontario early the ensuing spring.

Resolved, That the Agent do let out the building of the locks at deep cut on the estimate of our Engineer, with the necessary excavation immediately.

[You will perceive time is not allowed to advertise this, as the timber requires to be delivered this winter.]

2nd. As it appears from the statement made by the Engineer, &c. &c., that the sum of £54,663 will finish the Canal from the Welland to Grand River—and from the statement of the Secretary that we have £40,000 on hand, it is considered expedient to put the whole line under contract and endeavor to borrow the remaining 15 or £20,000—therefore it is

Resolved, That the agent do immediately advertise for letting out the line of the Canal from Deep Cut to Marshville, the aqueduct, dam, and piers, at mouth of Grand River, on the 19th day of January next, to the lowest bidder.

If the Board on mature consideration do not think the £25,000 can be procured the ensuing year, it is indispensible they adopt immediate measures for opening the navigation between the lakes—in this case the following resolutions will be necessary.

From the Reports submitted to us by Mr. Geddes, an Engineer employed to examine the line of the Welland Canal from Deep Cut to Lake Erie by way of Grand River, and from Mr. Barrett, our principal Engineer, it appears that the sum of £54,662, will be required for the actual work on the Canal from Deep Cut to Grand River—besides contingencies, interest of money, &c. &c. &c., and from the statement of our available funds from the Secret

ary it appears we have only the sum of £40.000, on hand—it is deemed inexpedient to undertake the completion of this part of the Canal the present season, nevertheless as it is highly important to effect the junction of the two lakes as early as possible.

Resolved. That our agent take measures for finishing the Deep Cut, and let out the four locks and necessary excavation immediately on the estimate of our Engineers.

In order that we secure a feeder from the Grand River as soon as the same may be required for the supply of the Canal between the River Welland and Lake Ontario:—

Resolved, That our agent advertise to let under contract on the 19th January-

1st.—The Dam across the Grand River.

2nd.—The Canal from Marshville to Deep Cut, in suitable sections—and a ditch in the rst place to be sunk within 3 feet of bottom.

3rd.—The towing path between Deep Cut and mouth of Chippawa, the cut at Chippawa to admit vessels from the Niagara River (as reported at last meeting by Mr. Barrett, estimated expense \$2000—and admit an expenditure of \$2000 on the towing path on the Niagara River. By this methed we would give directions to Mr. Simpson on the Marsh job to dig down the ditch at once, after which he might finish the canal as required.

We thus secure the completion of the Canal between the lakes, drain our lands and go on securely —in the other case we must, as we have heretofore, trust to fortune for an additional sum.

The only thing I have to request is that you will send me over by the next post instructions to let out the Deep Cut—and as soon as convenient to advertise for the other—as it is indispensable in point of time

WILLIAM HAMILTON MERRITT.

### No. 6.

MINUTES OF THE BOARD OF DIRECT-ORS FOR THE YEAR 1828.

21st January, 1828.

At a Meeting of the Board, held at York.

#### PRESENT:

The Hon. John H. Dunn, President, Henry J. Boulton, Esq., Vice President.

John B. Robinson, and D'Arcy Boulton, Esquires,

Directors.

A letter was read from Mr. Proctor respecting his concerns with the Company.

Ordered to be referred to the Solicitor—the Secretary to send Mr. P. his account current.

Mr. TenBroeck presented a statement respecting his land overflowed by the Canal.—Ordered to be deferred.

Measrs. Seymour & Langford applied for balance of account for Lattice Yates, delivered on account of O. Phelps' contract for locks.

Ordered, That £125 be paid them on account of Phelps & Co.

An account was presented from Mr. Galt on account of the Canada Land Company.

Ordered to be referred to Mr. H. J. Boulton.

H. N. Monson applied for a further advance on reserves on J. Simpson's contracts.

Resolved, That his Notes £37 10, and £100, formerly advanced, be assumed by the Company, but that no further advance be now made.

Ordered, That O. Phelps & Co's. Notes £500 now due at Bank, on account of the Lock contract, be renewed.

Ordered, That Bell & Co's. application for £500 on their reserve be advanced.

Ordered, That Mr. Phelps' application for money to purchase Hay, &c., on Deep Cut, he complied with, and that £250 he now advanced for that purpose.

Resolved, That the work ou the Locks do not proceed beyond what is absolutely necessary for the preservation of the property.

Resolved, That £75 be advanced to Mr. Phelps on account of land purchased of Jacob Dittrick, assigned the Company.

Recolved, That the Notes overdue at the Bank on account of O. Phelps & others, amounting to £4079 10s., be assumed by the Company and charged to the respective parties.

2nd February, 1828.

At a Meeting of the Board, held at the Parliament House, York,

### PRESENT :

The Honorable John Henry Dunn, President, Henry John Boulton, Esquire, Vice President, John. B. Robinson, and D. Boulton, Esquires.

Mr. Samuel Wood attended and proposed in order to settle amicably with the Company his much contested claim, that they should become purchasers of his Farm near St. Catharines, (100 acres,) for £750, to be paid in such manner as might suit the convenience of the Company.

To which proposal the Company acceded, and it was directed that the Solicitor to the Company shall examine the title, and if he find it sufficient shall settle the conveyance to the Company without delay.

14th February, 1828.
At a Meeting of the Board, held at York,

### PRESENT :

The Hon. John H. Dunn, President. Henry J. Boulton, Esqr. Vice President. John B. Robinson,

D. Boulton, and John Clark, Esquires. Directors.

The Agent attended and stated that all debts being paid, including advances by the Bank, the Company have at command £30,000—viz.

Grant from British Government,£17,777 Due on Instalments,
There has likewise been advanced to Contractors, which cannot be repaid till the conclusion of the work,£11,000  There will be required to finish the Canal to Welland River,£40,000  To Grand River,£50,000
290,000
Between this and the month of May there will be required an expenditure on the work of about £1000 per month =£3000  For advance on Grain

£4000

In May and the following months we shall expend at least, £1000 per month, until the Deep Cut is finished, but in order to take advantage of the early and dryest time of the season, £15000 is necessary.

From which it appears the Stock now called in will certainly carry us on until the first of June, and if by that time the amount to be paid in England can be available, no embarrassment will be felt till the first of August, before which time some means must be devised to obtain £50,000 for the remainder of the season.

The result of any attempt in this country to subscribe, or negotiate a Loan can be ascertained by the first of May. The result of any reference here can be ascertained by the middle of July.

### PROPOSAL

1st. To enlarge the Capital to £300,000.

2nd. To endeavor to sell Stock or effect a Loan in the United States.

3rd. To send an Agent immediately to England, to make an arrangement for drawing the 1/2 from Government, which we must apply to increase its proportion to the whole amount expended, which is implied in the Government Despatch.

4th. To endeavor to sell Stock.

5th. To endeavor to effect a Loan.

18th February, 1828.

At a Meeting of the Board held at York,

#### PRESENT:

Henry J. Boulton, Esq. Vice President.

John B. Robinson, and
John Clark, Esquires.

Directors.

Resolved, That all the Bridges on the Mountain summit be made 40 feet wide, for the purpose of admitting Steam Boats to the large Reservoir above Lock No. 1.

Resolved, That Marshall Lewis build all the turn Bridges agreeable to the Engineer's estimate.

John Henderson of Pelham having made an application for 400 acres of land on the marsh in Wainfest on lease for the purpose of an experiment to

grow hemp, ten of which to be sown this spring and manufactured in the fall for the inspection of the Board.

Resolved, That the same be granted for 10 years, at a nominal rent.

Resolved, That Mr. Phelps be advanced the amount of forage (hay and straw) delivered monthly at the Deep Cut on the statement of the Engineer.

2nd April, 1828.

At a meeting of the Board held this day at York,
PRESENT:

The Hon. John H. Dunn, President, H. J. Boulton, Vice President.
J. B. Robinson, and John Clark, Esquires.

Directors.

The Hon. T. Clark having made application for a copy of the papers relating to the arbitration on the matter of S. Wood and others, it was ordered that the Secretary furnish him with-them.

Resolved, That the work on the Deep Cut be prosecuted with all possible despatch as far as means will allow, and other parts of the Canal as moderately as possible until intelligence is received from Mr. Merritt, the Company's Agent in England.

Resolved, That during the absence of Mr. Merritt it is necessary that there should be some person to fulfil his duties, and therefore that Mr. John Clark be appointed for that purpose, but as this appointment will come more regularly under the new Directors to be elected on the 7th instant it is esteemed most proper that the salary be determined by them.

10th May, 1828.

At a meeting of the stockholders, held at St. Catharines pursuant to advertisement, for the election of Directors for the ensuing year—the following igentlemen were duly elected, viz:

The Honorable John Henry Dunn, The Honorable Colonel Wells, The Honorable William Allan, Henry John Boulton, Esquire, George Keefer, Esquire, and William Hamilton Merritt, Esquire.

10th May, 1828.

At a meeting of the Directors held at St. Catharines, PRESENT:

The Honorable John Henry Dunn, The Honorable Colonel Wells, John B Robinson, Henry John Boulton, and George Keefer, Esquires.

The Honorable John Henry Dunn was chosen President.

Henry John Boulton, Esquire, Vice President for the ensuing year.

The minutes were read and confirmed.

The Agent represented to the Board that the bridges which Mr. Lewis is now constructing are not of sufficient width—the Board therefore gave directions to Mr. Barrett (who was present) to see the resolutions of 31 March 1827 & 18 February, 1828, on that subject carried into effect, and that the bridges be not less than 14 feet in width, and of sufficient height above the surface of the water to admit of ordinary canal boats passing under, and that they be paid for according to his estimate.

Resolved, That the Balance Beam be painted, and the other timbers of the locks turred.

Resolved, That the Board will not consider itself bound by any contract which the Agent or Secretary may make until it has received the sanction of the Board.

The Agent represented to the Board in the presence of the Engineer that it did not appear to him that the Engineer paid sufficiently close attention to the progress of the work along the line.

Mr. Barrett stated that his presence was little wanted at the Deep Cut, but was more particularly so at the locks, to which he had attended very minutely, and also to every other part of the work as far as was necessary. The Board expressed its thanks to the Agent for representing whatever he thought amiss, and informed him that it will always be happy to receive his remarks and suggestions, however disagreeable such a duty might be to himself. But the Board continue to have every confidence that Mr. Barrett will exert to the end of the work the same judicious and diligent superintendence as hitherto, and they trust that he will impress upon those serving under him the necessity of the same care and attention.

The Board enjoined the Agent and Engineer to confine the operations as much as possible to the Deep Cut, and to postpone the other parts of the work as much as can be done consistently with the engagements of the Company and the preservation of the work, it being the earnest desire of the Board to apply their means and exertions as exclusively to the Deep Cut as may be found practicable.

Mr. Monson applied for an advance on Reserve Section 23.

Resolved, That no further advance be made on this or any other section at present.

Mr. John TenBrocck applied for remuneration for losses sustained by his land being overflowed by the Canal.

Mr. Alexander Vanalstine applied for payment of extra work performed on his job at the Deep Cut in consequence of the ditch filling up from other contractors—referred to the Engineer and Agent to fix a just value thereon.

Mr. Barrett did not think any allowance should be made—the petition was therefore rejected.

Love Newlove applied for remuneration for losses sustained in receiving, storing, and delivery of grain and hay, and cutting roads on Deep Cut.

Ordered, That Mr. Phelps do report on the matter next Board.

W. G. Harris laid certain claims before the Board, the consideration of which were postponed until Mr. Merritt returns from England.

Mr. Hepburn applied for an increase of wages for duty performed at the harbor.

Resolved, That he be allowed \$26 per month.

A letter was read from Mr. Yates dated New. York, 18th April, respecting the funds of the Company.

Resolved. That considering the probable expenditure for the next two months, and being exceedly anxious that the Contractors for the Deep Cut should be enabled to proceed without any interruption for want of funds, the Board feels it necessary to take every means in their power for procuring money, since there is reason to believe that the funds now at the disposal of the Company will be exhausted early in June—It is therefore thought important that one of the Directors should proceed immediately to New York to confer with the stockholders there, and to raise, if possible, the sum of £25,000 by loan or subscription of stock. The President not being able to go, the Vice President consent to undertake the mission, and he is hereby authorised to proceed with as little delay as possible with discretionary power to act according to circumstances by Power of Attorney to be approved of by the President and Directors at York.

5th June, 1828.

At a Meeting of the Board of Directors, held at St. Catharines,

### PRESENT :

The Hon. John H. Dunn, President.

The Hon. Colonel Wells, and George Keefer, Esquires,

The minutes were read and confirmed.

The estimate for May, amounting to £5217 17s. 3d. and contingent account = £38 13s. 4d., were approved and ordered to be paid.

A letter was read from J. Gooding, requesting an advance on the amount reserved on his several sections.

A resolution having passed last Board not to make any further advances at present, Mr. Gooding's petition cannot be complied with.

L. Newlove's petition, deferred last meeting, ordered to be further postponed until Mr. Merritt returns.

Vanalstine's do. do.

A letter was read from Captain Northrup, expressing a wish to purchase a building at the harborformerly used by Hovey and Co., as a stable.

Resolved. That Captain N., may remove the said building and have the use of it for such time as he may require, subject to the Company's order and control.

Jacob and John TenBroeck's land having been surveyed as per order of the Board, and it appearing

K4

that £84 0s. 3d., is due to the former, and £131 7s. 4d., to the latter:—

Ordered, That they be respectively paid.

Duncan Kennedy, applied for an additional estimate on work performed in 1824.

Resolved, That an advance of £15 be made to him, and that the final adjustment of his claim stand over until he be fully acquainted with the business.

As no estimate has been taken upon the excavation at the harbor on Wainfleet Marsh,

Resolved, That \$50 be advanced on the former, and £187 10s., on the latter.

Mr. Barrett stated to the Board the absolute necessity of raising the piers at the Harbor.

Resolved, That the Engineer order such work to be performed therein as in his judgment he may think requisite.

July 3rd, 1828.

At a meeting of the Board of Directors held at St. Catharines.

#### PRESENT:

H. J. Boulton, Esquire, Vice President,

The Hon. Colonel Wells, and George Keefer, Esquire, Directors.

The minutes were read and confirmed.

The estimates amounting to £7808 1s. 7d., and contingencies £8 17s. 8d., were approved and ordered to be paid.

A Letter was read from Yates & Co., stating the balance in their hands to be £319 14s.

Resolved, That it be drawn for at 60 days, and they be advised accordingly.

P. Shaver's award was considered.

Resolved, That a copy of his will be sent to the Solicitor General, together with a survey of the land required, and a copy of the award.

A Letter from J. Gooding applying for the full amount on rock excavation, Section 19, was read.

Ordered, To be considered next Board.

The consideration of Mr. Clark's Salary postponed to next Board.

Mr. Monson applied for advance on Reserves.—Rejected.

Mr. Phelps' note £500 on lock contract, due 13th July.

Ordered, To be renewed.

A letter was read from James Whyte, Quebec, recommending Parker and Wyatt's cement.

Resolved, That a barrel be ordered as a sample.

August 8, 1828.

At a Meeting of the Board of Directors, at Niagara Falls.

#### PRESENT :

The Hon. John H. Dunn, President.

The Hon. William Allan, and George Keefer, Esquires,

Directors.

The minutes were read and confirmed.

Mr. Wood's award was considered.

Resolved, That it be referred to the Solicitor General, requesting him to have the deeds completed without further delay, and that the Secretary have the Copies of the Deeds certified by the Registrar and forwarded to the Solicitor General for that purpose.

A letter and statement of Hartwell's debts were submitted to the Board, also two letters from D. Thompson on the same subject in which he proposes to take a contract of Hartwell's job.

Resolved, That the amount of Hartwell's estimate £253 2s. 3d., be retained by the Company.

Resolved, That the Engineer and Agent be authorised to let the late John Hartwell's job at their discretion.

Resolved, That Rowley's estimate, £56, be retained by the Company, and that the Secretary write to J. & A. Rowley, respecting the claims upon them.

Mr. Monson's application for an advance on reserves, was considered.

Resolved, That £125 be advanced him.

Mr. Phelps attended respecting the amount reserved from his land contract.

Resolved, That \$100 be reserved on locks No. 27, 28, and 29, and \$40 on locks 1, to 26, and 30 to 32 inclusive, and that \$1000 be advanced on his contract in addition to his estimate for July.

Messrs Simpson & Co., attended respecting damage sustained on their job at the Deep Cut.

Resolved, That the adjoining contractor be urged to remove the impediment complained of, and the £125 be deducted from the estimate of Simpson and Co., on account of advances.

Bell & Co., applied for advance on Section 15.

Resolved, That £125 be advanced on reserve.

Mr. Gooding's letter postponed last Board, was considered, and as the work on Section 19, would in all probability be finished this month, it was not thought advisable to make any further advances upon it.

Mr. Pauling's letter of June 5th, respecting his mill seat, considered.

Resolved, That his rent do not commence till the water of the Chippawa is brought through the Canal.

September 18th, 1828.

At a Meeting of the Board of Directors, held at St. Catharines.

#### PRESENT:

Henry J. Boulton, Esquire, Vice-President.

The Hon. William Allan, and
George Keefer, Esquire,

Directors.

The minutes were read and confirmed.

The estimates, amounting to £5455 6s., and contingencies to £14 2s. 9d, were approved and ordered to be paid.

The Engineer was required to make a report respecting the Saw Mill on Section 32.

The Secretary was ordered to purchase 5 barrels of oil, and a proportionate quantity of Spanish Brown, &c., for lock gates.

Ordered, That the Secretary write to the Stockholders, &c., who are yet in arrear.

A letter was read from Mr. Thompson, respecting the late Mr. Hartwell's concerns, and proposing to finish his job on Deep Cut, in connexion with L. Newlove.

Rcsolved, That Messrs. Thompson & Newlove's offer be accepted.

A letter from Price and Johnson respecting labor performed on Hartwell's job.

Referred to the Administratrix.

Resolved, That the interest due to the Government of Upper Canada, due the 12th inst., stand over till next meeting of the Board.

Resolved, That the work on the Marsh be proceeded with so far as it can be done without interfering with the Deep Cut.

Resolved, That the Company subscribe £50 towards making a road from Sugar Loaf settlement to Misener's in Wainfleet. [Rescinded on the 12th Instant.]

Pratt and Simpson required an extension of time to pay their advances.

Resolved, That their petition be granted. Adjourned.

September 12th, 1828.

At an adjourned Meeting of the Board, held at St. Catharines.

#### PRESENT.

Henry J. Boulton, Vice President,
The Hon. William Allan, and
George Keefer, Esquire,

Directors.

Mr. Wood attended the Board when it was finally agreed to give him £175 as a compensation for the land taken by the Company and overflowed by the Canal, for which a deed was to be prepared accordingly.

Adjourned to Deep Cut.

### PRESENT:

In addition to the above—John B. Robinson, Esqr.

A letter was read from Monson Simpson, & Co. respecting a road to be made from the Sugar Loaf settlement to Misiner's.

Resolved, That the Company make a road one half the distance required from Mr. McDonald's line towards the Sugar Loaf, and that the resolution of the 11th respecting a donation of £50 be rescinded.

Mr. Thompson attended respecting Hartwell's job, when the resolution of yesterday was confirmed, and on which they will have 35 cents per cubic yard, and 10 cents for scowing.

An account was presented of laborers who had not received their pay upon Hartwell's job, amounting to £78 10s. 10d.

Resolved, That £66 18s. due on the above for August be appropriated to that purpose, and the balance, £11 12s. 10d., be made up by the Company.

October 9th, 1828.

At a Meeting of the Board held this day at York,

#### PRESENT :

The Hon. John H. Dunn, President. Henry J. Boulton, Esquire, Vice-President.

The Hon. William Allan, and J. B. Robinson, Esquire, Directors.

The minutes were read and confirmed.

The estimates, amounting to £4,544 12s. 11d., and contingencies, £24 2s. 11d., were approved and ordered to be paid.

Mr. Phelps' note, £500 on Lock Contract, due the 14th instant, ordered to be renewed.

Pratt and Simpson applied for an extension of time to pay advances on the Deep Cut.

Monson Simpson, & Co., applied for a loan of \$3000 upon the Marsh Contract, to be paid by instalments from estimates.

Resolved, That the President endorse a note for the above amount at 90 days, to be renewed, deducting the said instalment at stated periods.

McMahon applied for the Company to retain the reserves from the late sub-contractor on section 22.

Resolved, That the said reserves be retained until the work is complete.

Yates & McIntyre's letter respecting the Vice President's drafts upon New York was read.

Resolved, That the said drafts be retired at the Bank, and that Messrs. Yates. & Co. be informed thereof.

A letter was read from Mr. Northrup respecting obstruction at the harbor.

Resolved, That the thanks of the Board be expressed to him, and that Mr. Barrett be instructed to have channel sounded and the impediment removed.

Mr Phelps applied for the privilege of erecting a saw mill on the Canal, near Lock 29.

Resolved, That his petition be granted, and that he have the use of it for two years gratis, after which he may take the site at a valuation; or the Company take the mill in like manner at the option of the Company.

Resolved, That Mr. Boulton be paid £100 for his expenses to New York.

Resolved, That 50 be advanced to Mr. Clark on account of his salary.

N. Pauling applied to enlarge the floom of his mill at the harbor.

Resolved, That he be permitted to do so under the direction of the Engineers.

November 21, 1828.

At a meeting of the Board, held at St. Catharines:-

### PRESENT:

Henry J. Boulton, Esquire, Vice President.

The Hon. Col. Wells,
The Hon. Willam Allan,
John B. Robinson,
George Keefer, and
Wm. H. Merritt, Esquires,

Mr. Merritt's mission to England was taken into consideration.

Mr. Goulburn's letter was read.

Mr. Stewart's letter was read, authorising the President to draw upon E. & R. Ellice & Co. for £30, 000.

Resolved, That the President write to the Hon. J. Stewart, of the Treasury, requesting him to order the remainder of the loan to be paid over to Messrs. Ellice & Co.

Resolved, That a letter be written to Messrs. Ellice & Co. accepting their offer of becoming Agents to the Company, and advising them that the President has drawn upon the Treasury for £20,000 in their favour, and at the same time that he will now draw upon them for £10,000 & the remaining £10,000 at a future period in favor of the Bank of Upper Canada.

Resolved, That Mr. Merritt's negotiation with Mr. Bliss, respecting 100 shares Canal stock, and with Messrs. Ellice for 1200 shares be agreed, and that letters be written to them accordingly.

Read a letter from Messrs. Bosanquet, Pitt & Co. respecting their receiving stock, dividends, &c.

Resolved, That they be appointed Bankers to the Company in London, and that they be drawn upon for £2,500 in favor of the Bank of Upper Canada, and that they be advised thereof.

Mr. Dawson's letter respecting his being appointed Agent at Liverpool.

Resolved, That it be agreed to on his disposing of 400 shares and that he be written to accordingly.

Read the Resolutions of the Canada Company respecting a loan of £6000; also Mr. Spankie's opinion and Mr. Galt's letter.

Resolved, That the President obtain from Mr. Galt specific proposal on the subject.

Messrs. Yates & Co. having applied to have drafts on London pass through their hands.

Resolved, [The Board having taken into consideration the said application] That the 10th clause of the Act 1825, requiring all monies to pass through the Bank of Upper Canada, it is out the power of the Directors to allow the funds of the Company to pass

through the hands of any private individual by which the Company may subject itself to cost, in case their drafts should be dishonored.

Resolved, That the President draw upon Messrs. Yates & Co., for the balance in their hands at 30 days' sight in favor of the Cashier of the Bank of Upper Canada.

Mr. Merritt having stated that beside the £300 sterling advanced to him on going to England, he had expended £200 more, which he had received in London.

Resolved, That Bosanquet & Co. be requested to carry the same to the debit of the Company in full for compensation to Mr. Merritt for his mission to England.

Sloan & Co.'s contract was taken into consideration.

Resolved, That they be allowed to go on with their work at the harbour in the spring, or relinquish the same on giving notice thereof at the next Board.

Resolved, That Mr. John Clark be paid £200 for his services during Mr. Merritt's absence in England, and for one month from this period.

Mr. Jacob Keefer applied for a mill privilege near the Canal.

Resolved, That Mr. Keefer be allowed to erect a saw-mill, and that he have the privilege for the same period which others have, at a rent to be fixed on by the Company, or the Company to purchase the mill at valuation.

SATURDAY, Nov. 22, 1828.

At an adjourned meeting of the Directors held at St. Catharines.

The Directors proceeded to the Deep Cut, accompanied by Mr. Barrett and Mr. Phelps, and having examined the recent slides which have taken place, of which the Engineer has given a particular description.

It was proposed as the best mode of overcoming the difficulties occasioned by the unsoundness of the bottom of the Deep Cut to bring down a feeder from the Grand River from the still water above the Barefoot Rapids in such a direction as will intersect by the shortest practicable route the proposed line of the Welland Canal from the Grand River to the Welland, (it is calculated by these means a head of water 14 feet above the western section of the Canal will be obtained) to be descended by two locks.

The Grand River will doubtless afford a constant supply of water, and by abandoning the last project of deriving the supply from Lake Erie, the necessity will be superseded of proceeding to a greater depth with the Deep Cut, and the level of water through the Cut will be raised 12 or 16 feet, so that the present towing-path would constitute the bottom of the Canal—a navigation would thus be effected 110 feet in width through the Cut—and another most material consideration is, that the excavation through the Marsh from the Welland to the Grand River need not exceed 7 or 8 feet in depth—whereas, it appears upon the most accurate survey which has been taken,

that the average cutting, according to the original plan would be from 18 to 20 feet; besides the immense difference in expense, other considerations concur to make the deduction in the excavation along the western section most desirable.

The prospect of these advantages, added to the consideration that no other method presents itself for so certainly overcoming the unexpected difficulty of completing the Deep Cut, determine the Directors to adopt it, if upon examination and further reflection no obstacles occur which do not appear at present.

It is also to be observed that the improvement proposed can be easily so managed as to make the Feeder from the Grand River prove indeed a convenient boat canal, which will extend the advantage of an inland navigation to within 4 miles of the village of Brantford.

Having this change in view, the Board examined the different acts of the Legislature forming the Charter of the Welland Canal Company, in order to ascertain whether they have the power of extending their operations, &c. so as to pursue the proposed plan, and whether they can bring the water down from the western section of the Canal by a feeder along the bank of the Welland until it intersects the Deep Cut, so that the right of water obtained from the Grand River can be preserved while the Welland will still form a navigable canal, from whence vessels will ascend to the proposed new level of the Deep Cut by two locks.

The Board having come to the conclusion that besides the circumstances which threaten to prevent the completion of the Canal through the Deep Cut according to the original plan, and which would render the durability of the Canal at all times uncertain, it is competent to them to adopt the proposed alterations, and to apply the power given them by the Legislature in its accomplishment.

The Board further directs that the Engineer shall without delay make surveys for the purpose of ascertaining the proper lines for a feeder from the Grand River above the Bearfoot Falls to the canal leading from Broad Creek, and for the other feeder along the bank of the Welland to the Deep Cut, keeping in view that the feeder from the Grand River would be such as to afford a navigable boat canal 4 feet depth of water.

That these surveys be made with the greatest care and deliberation, and that estimates founded on them be immediately submitted to the Board.

Resolved, That Mr. Clark proceed immediately to the Welland and Grand River, and endeavor to obtain a relinquishment or purchase of whatever lands may be necessary for a feeder before alluded to.

The Board next took into their consideration the present state of the Deep Cut, and with every means of information which their own observation, the opinion of the Engineer, and others could furnish, and having reflected upon the different suggestions made, and particularly on a plan submitted by Mr. Phelps of supporting the bottom and sides of the Deep Cut with timber, and received the opinion of the Engineer and Agent upon it, they conceive that it is not expedient to continue any further operations on the Deep Cut through this winter, either with a view of removing the earth which has slipped down, or of staying the adjacent portion of the Canal.

They direct that the Engineer shall ascertain by boring the bottom of the Deep Cut in various parts through the whole length what is the nature of the earth below the bottom—how near the bottom any soft, or loose, or unsound stratum occurs, and to what depth such stratum extends, and that a minute report of this be made as soon as practicable by the Engineer.

They also direct that the water shall be drawn off from the sides of the Welland Canal by ditching, wherever it appears that its remaining in its present situation can be injurious—and that particular attention shall be paid to repairing any injury the tow path may have received, and to prevent it for the future from teams travelling upon it, &c.

The Board is not aware that there is any Civil Engineer in this Province or in Lower Canada whose, judgment would be valuable, and whom they could get to examine the Deep Cut in its present state.

The Board further directs that the Engineer shall without delay so lay out and arrange the work to be done this winter by the contractors for the canal through the marsh, as that whatever shall be done may be consistent with the purposed change of plan with regard to the dimensions and depth of excavation.

With respect to the harbor on Lake Ontario, the Engineer reported that no injury appears to have been sustained to the piers so far as they are completed, but that the severe gale of Saturday last had removed and partly thrown down a pier which was in the act of being constructed. The Board directs the particular attention of the Engineer and Agent to the preservation of the work so as to secure it against the storms of winter—and with a view to its early completion the ensuing spring, an estimate of the work necessary to be done to render it permanently secure and to complete the excavation, be prepared and submitted to the Board.

The Board directs that an inspection of the locks be made by the Engineer, and a report of their present state, and the Agent is requested to engage Mr. Phelps to take them under his superintendence and charge through the winter and spring, making all necessary preparations for resisting any injury from weather or floods, and also to exercise a constant care of the sides of the Canal, including towing paths and all erections.

Mr. Phelps laid before the Board an inventory of all cattle, carts, and other property possessed by him and transferred to the Company, the same having been purchased with advances made by the Company and not now required for the immediate prosecution of the work.

The Board Resolved, That Mr. Phelps, in concurrence with the agent, take immediate measures for disposing of the above property by auction, sending advertisements without delay to York, the head of the lake, Niagara, and also to Lockport, Buffalo, &c., taking care to prevent their being sold at an increased and an unreasonable sacrifice—a credit of nine months may be given on notes with endorsers, to be approved by the agent.

Under the recommendation of Mr. Barrett, the board ordered the making of a ditch (suggested in SA

his report, 1st January, 1828) during the winter for leading the main branch of the Beaverdam Creek into the Canal.

The Board request that the Agent and Engineer, at their earliest convenience, prepare an account of the present state of the work for the purpose of framing the annual report.

Mr. Simpson, one of the Contractors for the marsh, attended at the request of the Board, and was asked at what price per yard he would be willing to make the canal through the marsh of the diminished depth as per proposed alteration, his present contract being 13 cents per yard, grounded on the supposition that the depth would on an average be 15 feet.

It appeared to the Board that according to the calculation upon which the above contract was founded, 10 cents per yard would be a liberal price and considerably beyond the proportion, but in consideration that they would have some claim on the Company on account of their preparation for the original contract, and from a wish that they should not be compelled to abandon the work, the offer was made of 10 cents per yard, to which the said contractors Simpson, Monson & Co., objected; asking 13 cents, and declaring ultimately that they would not take less than 11 cents.

It was at length agreed that the Company should give them 10 cents per yard, and if any difficulty should arise in the excavation from whence it should appear to the satisfaction of the Company that the contractor had a hard contract, the price of 11 cents should be allowed them, but not otherwise—and furthermore it is agreed if the general average exceeds six feet in depth, the excess shall be paid for on the estimate of the Engineer, and for 3 miles of the distance 11 cents shall be allowed.

Any embankment necessary to be made along this portion of the Canal will be paid for on the estimate of the Engineer.

The Board having deliberated upon the propositions made by Mr. Ellice in his letter to the President,—

Resolved, to accede to them, and Mr. Merritt having acquainted them of the interest Mr. Ellice had very kindly taken in the success of the Company, and the active exertions he had made in advancement of the great work which they are engaged in —it is therefore

Resolved, That Mr. Ellice's offer, that the House of E. & R. Ellice & Co., transact the general business of the Company in England as their agent, be accepted, with an expression of the sincere thankfulness of the Board for the essential services which Mr. Ellice has so promptly rendered.

Mr. Clark's letter to Mr. Merritt, respecting the amount granted to him during Mr. Merritt's absence in England as per Resolution of the 21st, having been read:

Resolved, That that resolution having been passed at a full board it cannot be rescinded, but may be reconsidered on a fur re occasion.

Application having been made on behalf of the widow of the late Smith Ward, who is left in very destitute circumstances, and is therefore unable to pay thearrears due on 10 shares of Stock held by him.

Resolved, That the said shares be forfeited, and the amount paid on them, £95 5s., be presented to the widow.

Read a letter from Mr. Adams, offering to rent the mills lately occupied by Mr. Merritt.

Resolved, That the said mills be advertised, and that sealed proposals be received until the 1st January, 1829, to rent them for 5 years.

The executors of P. Shaver presented a petition to the Board which was considered.

Resolved, That upon the Company receiving a title to all the land required by and overflowed by the Canal, the £125 awarded, be paid, and the Engineer is desired to make an immediate survey to ascertain the quantity.

Lewis and Chadwick applied for a lease of mill seat on Lock No. 1.

Resolved, That they may have it for five years at an annual rent of £7 10s.

Several petitions were laid before the Board, by Harris, McMahon, Newlove, Vanalstine, and others.

Resolved, That they be examined into by the Agent and Engineer, and reported upon next Board.

Adjourned.

24th November, 1828.

At an adjourned Meeting of the Board, held at St. Catharines,

### PRESENT:

Henry J. Boulton, Esqr. Vice President.

The Hon. Colonel Wells,
George Keefer,
J. B. Robinson, and
W. H. Merritt, Esquires,

G. A. Atkins applied for payment of work performed upon Hartwell's job after his decease, amounting to \$90.

Mr. D. Thompson having by order of the Board \$314 16 cts. placed in his hands for the payment of men employed upon the same job, and a balance still remaining, he is hereby authorised to pay the above on his being certified that the account is correct, and upon receiving Atkins' receipt for the same.

15th December, 1828.

At a Meeting of the Directors, held at the Bank of U. C., York,

#### PRESENT:

The Honorable John Henry Dunn, President, Henry John Boulton, Esquire, Vice President, The Hon. W. Allan, and John. B. Robinson, Esquire,

| Directors.

The minutes of November were read, and that part of it which refers to an offer made to Messrs. Lewis and Chadwick being indifferently worded, and not coming immediately within the recollection of

the Board, was ordered to be reconsidered at the next regular meeting.

The Directors then proceeded to take into consideration the terms upon which Mr. Merritt had obtained the Loan of £50000 from England.:

Whereupon it was Resolved, that the Board cannot forbear an expression of regret at finding that this Loan has been only made upon condition that the grant of 5 of the cost of the Canal heretofore engaged to be paid by the Government shall be relinquished, a condition amounting in effect to the requiring a bo nus of £27,000 for the Loan of £50,000, while the payment of full legal interest of 4 per cent per annum upon the whole Loan is exacted, and the repayment of the principal in ten years, while the Canal and tolls are in the mean time to be pledged to the Government.

This arrangement is so unreasonably disadvantageous that the Board cannot believe it possible after the Canal shall be actually completed, the Government will refuse to accept the payment of the balance between the grant first proffered and the Loan of £50,000, as an extinguishment of the whole Loan

The ample power given to the Agent of the Company under a very pressing exigency enabled him to enter into the stipulation above mentioned, and the Board cannot hesitate to confirm it—but on behalf of the Stockholders generally and especially of those whose deep stake in the Company would make the arrangement with the Government, if literally carried into effect, almost ruinous to them, the Board has felt it necessary to record the sentiment with which they have confirmed the arrangement.

The Directors were then about to consider the nature and conditions of various other engagements made by Mr. Merritt when in England, but as the Letters and papers necessary to a complete understanding and investigation of the same had not been sent from St. Catharines, it was

Resolved, That the Board should adjourn to Monday next at 11 o'clock, and that in the mean time the Secretary be written to requesting him to furnish all necessary documents and correspondence.

The Board therefore adjourned accordingly.

22nd December, 1828.

At a meeting of the Directors held at the Bank, York,

### PRESENT:

The Hon. John H. Dunn, President. H. J. Boulton, Esq. Vice President. The Hon. Col Wells, William Allan, and John B. Robinson, Esq.

The minutes of the former meeting were read and confirmed.

Read a draft of a Letter to Mr. Yates respecting the negotiating of the Company's drafts on London through his house, which was approved, and the President was requested to sign and transmit the same to him.

Read Mr. Ellice's Letters of the 2nd, 13th, and 27th August, upon which the Board determined that

if the President finds that he can invest the money in Government debentures, he shall immediately draw upon Mr. Ellice for the amount therein stated, allowing him 10 per cent exchange in the transaction, and that Mr. Ellice shall be informed that the Company not having occasion for its immediate use, have not yet deposited the security required by his Letter, but that, before any part of it is withdrawn by them from the security in which it is invested, the arrangement shall be perfected on the terms suggested by him.

Ordered, That a meeting of the Board be held as soon as Mr. Geddes' Report on the Feeder from the Grand River can be obtained—that Mr. Merritt be requested to attend if in his power, and that the Secretary be desired to furnish a general and particular account of the Company's affairs for the information of the Directors.

### IN THE YEAR 1829.

After receiving the Reports of Messrs. Geddes & Barrett, and the deliberation of one entire day at this place the Directors consented to adopt the plan of gaining a higher level, and on the 1st January, the most extraordinary and unparalleled exertion was made, which with the most timely and judicious system of management, compelling by a written agreement each Contractor to retain a certain force until the entire line to Grand River was finished, also to allow any other Contractor after the 15th of May to enter on any portion of his work, ensure the completion of the entire line 27 miles in length, besides the North end of Deep Cut-4 Locks-Aqueduct and Dam in time to let through the Grand River water and pass the two first Vessels between Lakes Erie and Ontario. The Report of this year gives a general view of the work; the Minutes give a detail of particulars.

It will be observed in the Report, that engagements made in England for taking up Stock had not been complied with.

That reasons are assigned why the Dam was removed from the mouth of the Grand River.

The Cut at Chippawa and Towing Path on Welland was made this year.

The first proposal for establishing a line of Steam Boats is also suggested.

This year the following Directors were appointed by the Legislature—viz.

J. J. Lefferty, and Robert Dickson, Esquires.

And the following by the Stockholders—viz.

The Hon. John Henry Dunn,
William Allan,
John B. Robinson, Esquire,
Henry J. Boulton, Esquire, and
George Keefer, Esquire.

#### No. 1.

REPORT OF THE BOARD OF DIRECTORS OF THE WELLAND CANAL COMPANY FOR 1829.

To the Stockholders of the Welland Canal Company.

As there is reason to believe, from remarks occasionally made in public papers and from other circumstances which have come under the notice of the Directors, that very erroneous opinions are entertained respecting the present state of the Welland Canal, and the prospects of its completion; & as the facts when truly stated, far from being discouraging, are exceedingly gratifying, the President and Directors think it proper to communicate to the Stockholders, and to the public generally, the result of their recent observation of the whole line of the Canal.

In January last, it was determined by the Directors, for the reasons stated in their last report, to discontinue the farther excation of the Deep Cut, and to overcome the difficulties experienced in that part of the Canal, by throwing a dam across the Grand River and bringing down the water of that River along a higher level than that of Lake Eric. To persons acquainted with that part of the country, the proposed alteration, and the effect of it, would be sufficiently understood from the statements in the last published Report of the Directors, and from the Report of the Engineer Mr. Geddes, which was appended; but they may perhaps be made plainer to persons not possessing that local knowledge by the following statement.

The Grand River which empties into Lake Eric about forty miles above Fort Erie, has so little full for the distance of sixteen or eighteen miles from the mouth, that the waters rise and subside throughout that extent according to the prevailing winds on the lake. It was formerly proposed to commence the Canal about two miles from the mouth of the Grand River, at the junction of a creek or inlet called Broad Creek, from which indeed, rather than from the Grand River, the Canal was to have led through the adjacent low lands and the Wainfleet Marsh to the River Welland, more commonly called the Chippawa, into which vessels would have passed by two Locks of six feet lift each. The Welland was then to have formed the channel for navigation for about 9 miles, or to a point distant about \$ of a mile from the beginning of south end of Deep Cut which was to have been excavated to the level of the Welland; and from thence to Luke Ontario, the descent of 320 feet was to be accomplished by thirty-two locks. Upon this plan it will be seen that the canal was to bring down to the Welland through the Wainfleet Marsh, the waters of Lake Erie; and to bring down through the Deep Cut the water of the Welland, which, in truth, is the water of Lake Eric upon a lower level, or rather of the Niagara River running out of Lake Eric; because the Welland is a mere estuary or arm running up from the Niagara River, having often no perceptible current and sometimes

indeed, no supply of water from the interior. It is a deep still water, upon a level with the Niagara river at the mouth of the Welland, and about 12 feet below the level of the waters of Lake Eric, at the mouth of the Grand River.

Proceeding upon this their original plan, the Directors had made very great advances towards its accomplishment at the close of the last season, and they do not rely merely upon their own judgment when they add, that they have effected as much with the means expended as can be exhibited in any similar undertaking in any country. The greatest difficulty (the deep cutting) had been so far surmounted that in two weeks more it was confidently expected a passage would have been made through it for the waters of the Welland; and the progress of the lower portion of the Canal was more than commensurate. The casualties which arrested the work in this stage, (the slipping of the Banks of the Deep Cut and the pushing up of the bottom) has been described and the cause of it being evidently such as to make it unsafe to trust to the completion and preservation of the Canal upon the original plan, the scheme was adopted by the Directors which has been already explained, and which consists in the following alteration :-

The Grand River is capable of being dammed at a moderate expense. It has been determined to do this and thereby to raise its waters about five feet-to make a Canal from the dum through the adjacent low lands and the Wainfleet Marsh to the River Welland, striking that River about five and a half miles lower down than it was before intended. Having a level of water five feet higher than by the original plan, the cut through the marsh will be of less depth in proportion; and consequently vessels will approach the Welland upon a level which will admit of their crossing it in an aqueduct, that will be sufficiently raised above the River not to obstruct the navigation more than the Bridges which at various points are thrown over it. From this aqueduct (the banks of the river being most favorable) the Canal is to be continued along the Northern side of the Welland to the Deep Cut, which it enters near the southern end of it, and preserves of course, through the cut, the same level of water which will have been brought down from the Grand River, descending at the northern end of the Deep Cut by two locks to the level originally designed when the Welland was to have constituted the feeder. From this point to Lake Ontario there will be no deviation from the first design.

Retracing the line down to Lake Ontorio, upon the plan thus explained, the Directors will briefly remark:—That the practicability of making a permanent dam at the Grand River is not doubted; the breadth of the river at the proposed point being about 9 chains; the water almost free from current; the depth about 10 feet, and the bottom favorable.—The contract for the dam is in the hands of persons of ample responsibility and of the greatest experience in works of this description; and it is at this moment prosecuted with energy and despatch.—In cutting, from thence to the Welland, through the Wainfleet Marsh, five feet depth of excavation, for a distance of 12 to 15 miles is saved upon the present plan; the navigation will be better than the original design would have afforded: there can be no room for apprehension as to the nature of the bottom, at

the present depth; and the Canal will present a line of 13 miles mathematically straight. The acqueduct over the Welland seems to present no difficultynone was apprehended; and the appearance of the work, at the present moment is most satisfactory. The Canal from thence to the Deep Cut, along the northern bank of the Welland traverses a line which presents very peculiar facilities; and thus the Deep Cut is reached by a Canal preserving the same level throughout the whole extent.-The passage through the Deep Cut will be along a level 16 feet higher than was at first proposed, this will elevate the channel above all inconvenience from the slides, and place it, as it is believed, beyond the danger of similar casualties; and the great depth of water and extent of surface, will render the navigation more easy and agreeable.

From the Canal, just before it intersects the Deep Cut, a descent is provided by two Locks to the Welland—thus forming a navigation from Lake Ontario to the village of Chippawa, Fort Erie, and Buffalo, by the Niagara River, and a cut is nearly completed through the point at the mouth of the River Welland which will render the transit into the Niagara River safe and convenient.—The Grand River it should be added contains an ample supply of water for the Canal; the dam is to be thrown across to a point about 5 miles above the mouth, near which a Lock is to be made, that the navigation of the Grand River may not be obstructed. Vessels will pass from Lake Eric into the Canal by the original route, leaving Grand River two miles above its mouth from Broad Creek.

That the Canal is of certain and easy accomplishment, upon this plan, there is no doubt in the opinion of men of science and great practical experience; and that when completed it will afford a navigation preferable to that at first contemplated, is plain.-But although conviction of this fact offers the best consolution for the check which the work has received from the unlooked for casualties at the Deep Cut, it is not to be inferred, as a necessary consequence, that the work ought to have been undertaken at first upon the plan which the Directors have now been compelled to adopt.—On the contrary, besides other considerations which it is not necessary here to enter into, the damming of the Grand River was a measure which the Directors would not and could not have resorted to, without necessity; and, although an idea of doing so was formed in a very early stage of the undertaking, it was soon relinquished.

The Grand River for the distance of 18 miles from its mouth is of sufficient depth and breadth for navigation by steam boats and vessels of every description used on the lakes; and little or no inconvenience, from current, occurs throughout this distance. Although the shoal at the entrance renders the Grand River of comparatively little use at present, as a harbor, still the navigation upon such a river as we have described ought not to be impeded without a strong necessity; and the proposed dam, although a convenient Lock will be constructed in it, has, therefore been thought objectionable, and the Directors have had no little opposition to encounter on that score .-The overflowing of a considerable quantity of land up the Grand River, although the proprietors will receive from the Company the just indemnity assur-

ed to them by law; and the interference with the passage of fish up the river, although there are none of the most valuable kinds which frequent it: and although measures may be adopted which will diminish the inconvenience apprehended, if they do not altogether overcome it, are farther objections which have been advanced against the present plan, and they are objections which would have been urged with infinitely greater force if the Directors had taken such a step while another course was practicable

The difficulties indeed which the Directors have still had to contend against in consequence of the prejudice entertained against the damming of the river, are the best proofs that they would not have been thought warranted in attempting it upon the mere footing of expediency and choice. As an alternative they have adopted it rather than abandon a work of incalculable importance to the country in a military and commercial point of view, or put its ultimate safety to hazard after more than £200,000 had been expended in its accomplishment. Any inconvenience or loss it may occasion to individuals will be cheerfully and amply compensated; and the navigation which will thus be formed, will unquestionably be better and more convenient than would have been obtained by completing the original design.

When this alteration was first determined upon it was intended that the dam should be constructed across the Grand River, about 572 yards from the mouth, at the upper end of the naval establishment; and not anticipating objections, preparations had been made and the work commenced. Objections, however, were urged by the naval commander in this Province, to which it was thought necessary to yield, and the work was discontinued.

On the 7th and 8th of May last the Directors examined the river for several miles up, and ascertained that no proper place could be found for the dam within a shorter distance than five miles from the lake. A site has accordingly been selected there; a contract has been entered into, and the work is proceeding rapidly. The objections advanced by Commodore Barrie extend to this site also, and indeed to any that might be proposed within the whole navigation line of the river, extending to the first of all about eighteen or twenty miles from the mouth.

With the sanction of the Lieut. Governor, however, which has been afforded to the Directors from a sense of the vast importance of the work, they have proceeded as they have done; not by any means in defiance or disregard of the protest which Commodore Barry conceived it to be his duty to make, but in the earnest confidence that His Majesty's Government possessing so great an interest in the work, and so fully aware of its importance, will not desire to enforce those objections, when the circumstances are fully before them.

The change of position, renders it necessary to make a feeder of five miles in length; and the gravel required for constructing the dam, must be all brought up in scows from the mouth of the river, nearly five miles—disadvantages, against which must be set the lessening the quantity of land to be overflowed, and the having a depth of water where the river is now to be dammed up, little more than half that which was found at the place first chosen; the

T4

river, however, at the point where the dam is to be constructed, is nearly as wide again as the other.

The Directors cannot but persuade themselves that His Majesty's Government will, from the disappointment which the Company have experienced, be the more induced to take upon themselves the charge of improving the harbor at the entrance of the Grand River, or rather of forming a harbor there; for there is, at present, nothing that deserves the name. Piers must be built, and a channel excavated; the works of that kind, to the extent necessary for commercial purposes, were part of the plan of the Welland Canal, for indeed without them the Canal would not be called accessible; but to make such a harbour as would be of use to a navy in time of war, is more properly a national work; and the Directors are encouraged to hope it will be undertaken on that footing.

The Directors next proceeded to lay before the Stockholders the present state of the Canal. visited it early the last month inspecting the whole line, and the result of their observation was exceedingly satisfactory. The Harbor at Lake Ontario has received no damage whatever from its exposure for two years: the Piers have not swerved, nor have they been in the slightest degree shaken. The brush Dam at the mouth of the twelve mile Creek by which the Basin is formed, and which sustains a head of 4 feet water, has received no injury; and there seems, therefore, no reason to doubt its durability. From Lake Ontario to the Deep Cut the Locks are in a great state of forwardness-two at the Northern end for descending from the Grand River level to the original nottom level of the Canal; and two near the Southern end of the Deep Cut, for passing such Vessels into the Welland as are to be navigated on that River, and the River Niagara, into Lake Erie .-These Locks with every necessary work connected with this part of the navigation, will be finished by the first of July next, if the weather is commonly favourable.

When the navigation by this route shall be thus completed, timely notice will be given of the ascent of the first Vessel that shall thus surmount the obstacle hitherto presented by the Falls of Niagara, to the navigation between the two great Lakes, Eric and Ontario. There will be collected, from streams and natural Reservoirs in the vicinity, sufficient water to fill the Canal so as to admit of this experiment; and indeed, if the season is not unusually dry, the supply will even suffice for using the Canal to a considerable extent.

It has been already explained, in the last Report of the Directors, that from the Deep Cut to the Grand River, the operations of the Compuny during the present year, will be confined to the making a Feeder of the ordinary dimensions and depth of a Boat Canal; but constructing the Aqueduct, and every thing beyond the mere general excavation of the difficulties against which the Directors have had to contend, have induced them thus to contract their work for the present, for fear of encountering the risk of being unable to meet their engagements, if they had proceeded immediately with the entire plan. The greater part of the excavation which will be necessary to enlarge the Canal is of such a nature that it can be most advantageously done in the win-

ter, when it will occasion no interruption to navigation. Public confidence will have been secured by
the junction of the waters of the two Lakes having
been effected; and it is not apprehended that there
will be any difficulty in finding the necessary funds.
In the mean time it is satisfactory to be able to state
that along much of the distance between the Deep
Cut and the marsh, the make of the land is such, that
little or no additional excavation is necessary to convert the feeder into a Canal of the requisite dimensions; and wherever this can be done by a moderate
increase in the expenditure, the Canal at those points
will be made, at once, of the full dimensions from the
Deep Cut to the Aqueduct, a distance of almost five
miles; the work presents no difficulty; the cutting is
shallow and ensy, and it will be completed about the
1st of July.

The Aqueduct over the Welland is in a state of great forwardness, and is indeed nearly completed; it is of sufficient size to pass any Vessel that can navigate the Canal. The work and the materials are excellent; and the Directors are convinced, that it will be found to merit the approbation of the Stockholders. It was commenced on the 12th February last: its length will be 400 ft., all the timber and other materials were prepared and delivered; the Piers sunk, the balance beams, string pieces, &c. erected; and, in short, the whole main frame up, when the Directors visited it on the 7th of May—part of the frame of the trunk or body of the Aqueduct, and the planking remaining still to be executed.

From the Aqueduct to a place called Marshville, (the point from whence the Canal was formerly intended to diverge to the Welland, taking a direction higher up the river,) is a distance of almost 8 miles, the work along this portion is far advanced, so that no doubt is entertained of its completion by the 15th of August, although the Contractors have been retarded by the very severe frosts of the past winter. It is to be observed that every part of the work from the Deep Cut to this point, was placed under Contract so lately as the 31st January last; before which time the Directors had it not in their power to decide finally, upon the operations of the present season.—It was not fairly commenced until the 12th of April when the frost disappeared; though every preparation had been previously made by the respective contractors.

From Marshville to the Grand River, the distance is nine miles.—The work through this portion of the Canal has been much longer in progress, and is in a state of great forwardness. Three miles of it is excavated to the bottom; four miles and a half is partly bottomed; and the remaining mile and a half is cleared and grubbed.

The next important point now remaining to be completed is the dam and the feeder from thence to the original line of the Canal; which will also serve, when finished, for a boat canal. The contractors feel confident they will be able to complete the dam by the 1st July; and the feeder, there is every reason to believe, will keep pace with the excavation on the lower sections of the Canal, as the ground is of a more favorable description, althoughit was not put under contract until the 30th of May.

From this minute review of the different sections of the Canal, the Stockholders will see that the work

is rapidly approaching its accomplishment. It seems not too sanguine an expectation to indulge that the whole will be finished by the 20th day of August next.

It is an interesting and important fact, to state that the Grand River, and the Lake above it, were clear of ice this spring on the 11th day of April; on the 10th of April the steamboat Niagara arrived at the town of Niagara, from Prescott—which proves, that at that time, the line of communication from Lake Erie to Montreal, by the Grand River and Welland Canal, was open, and open simultaneously.

When the Directors were at the Grand River, on the 5th of May, the narrow part of the Lake between the Grand River and Buffalo, was still blocked up with ice, and no vessel did leave, or could have left that port or could enter there, from the upper part of Lake Erie until the 14th of May. Saying nothing of advantages in the difference of distance, convenience and expense, there is a superiority so evident and so decided in having the exclusive channel to market for a portion of the season in which so great a share of the productions of the upper country may be forwarded, that it is impossible the Welland Canal can fail to be favourably looked upon by those whose agricultural and commercial interests must be so directly promoted by it.

At this moment, when idle rumours are circulating respecting the Welland Canal and unnecessary despondency admitted even by those who are sincerely desirous to witness its completion, the Directors have thus endeavoured to lay distinctly before the public its present state, and the hopes that may be entertained of its speedy accomplishment.

It has been their mortification hitherto to find, that while with the greatest proportion of strangers who visit this Province the Welland Canal seems to possess a particular interest, the inhabitants of Upper Canada in general, appear to have the most imperiect ideas of the stupendous nature of this great undertaking—the rapid strides by which it is advancing to its consummation; and the immense advantages to themselves, and to their country, which must inevitably follow the successful termination of a work, that it is probable will be thought hereafter to reflect some degree of credit upon those by whose encouragement and exertions it has been supported.

That difficulties may not yet occur, and that the Directors may not have to encounter a protraction of that anxious and perplexing exertion which has hitherto been necessary, they do not venture to foretell. They can only express their explicit assurance that they have not now before them any reason for anticipating difficulty in the execution of the remainder of the work.

Their financial arrangements have been attended with difficulties, which they had no reason to have expected; because they have arisen from a hesitation to fulfil engagements which the Directors considered to have been binding and conclusive, and upon which they therefore relied. No such failure however has occurred with respect to the Stockholders in America; and they trust, when pains are taken to contrast authentic information with groundless fears and idle reports, any hesitation which has hitherto been exhibited will be removed.

At all events the Directors trust they will not want means to complete the work as they are now proceeding with it, and according to the description they have given in this Report; and it would seem absurd to suppose that any serious difficulty will be afterwards found in completing the Canal without delay, according to the dimensions intended.

The Directors cannot forbear to pay a just tribute to the indefatigable exertions and judicious conduct of Mr. Menritt, the Company's Agent; and they continue to have every confidence in the ability of the Engineer, Mr. BARRETT.

JOHN H. DUNN,

President,

Welland Canal Co.

No. 2.

## Mr. BARRETT'S REPORT.

WELLAND CANAL OFFICE, St. Cutharines, 10th Dec., 1829.

GENTLEMEN,

During the present season I have been endeavoring to carry, into effect the plan approved of by the Board of Directors at the close of the last year, which was bringing a higher level from the Grand River to the North end of the Deep Cut, thereby raising above the soft ground or quick sand found below the level of the Welland River, and removing every apprehension of slips or similar casualties in future.

From the severe frosts in the winter the line was not properly laid out until April, although the Engigineers were out constantly, nor could the contractors commence before the middle of that month, or the first of May, on many parts of the work.

The dam across the Grand River, and the aqueduct over the Welland, the only two artificial erections on the whole line, were let out and commenced in due time to ensure an early completion the present year; the latter was finished early in August, and I have not the least doubt had we been permitted to pursue the plan then decided on by the Board, the whole line would have been finished in that month.

The situation selected for building the dam over the Grand River, was on the direct line of the Canal near the lake—the work was commenced in January and suspended in March, after expending about fifteen hundred dollars.

2nd. From the various delays attending the removal of the dam, the work was not commenced until the 1st of June, and many parts of the new-feeder not until the fifteenth. The loss sustained by the Company in consequence of this removal is fully stated in my letter of the 30th June last, to which I will refer you.

The water was let into the feeder from Grand River on the 7th of October; was immediately turned off to afford an opportunity of extending the security of the dam, and was not finally raised until November 6th, and from the extensive reservoirs to fill the Canal was not fully supplied until the middle of that month.

The cut to intersect the Niagara and Welland Rivers, proved a far more formidable work than we anticipated, the earth very hard and difficult to be excavated, particularly under the bed of the two Rivers. It is now finished, with the exception of removing 400 yards of loose earth by means of a scraper or dredging machine, which may be accomplished in a very short time.

Part of the towing path on the Welland River is finished, the remainder is in progress and may be finished next month, that on the Niagara River will require only a few days work when the navigation will be completed.

The work on the main ship canal will speak for itself, and will I trust silence those evil reports so industriously circulated against it,—the canal has been filled with water, the truest level and the best test, and I can only add that I feel fully satisfied with the result.

From the difficulties met with at the Grand River, and the increased expense caused by removing the dam, I have altered my opinion respecting the termination of the ship canal in Lake Erie, and recommend the subject to the serious consideration of the Directors. When at the Deep Cut, we are nine and a half miles from the mouth of the Welland in the Niagara River, and only eleven and a half miles from Lake Erie, at or about the Sugar Loaf, consequently should our canal terminate at that point a vessel would reach Lake Erie, twenty-eight miles above Buffalo, nearly as soon as she will the mouth of the Welland, eighteen miles below Buffalo, thereby gaining 44 miles, and this is effected by a comparatively trifling expense.

Three good situations offer on the shore of Lake Erie, in this vicinity, for harbors—viz:—Steel's, Grabiel's, and Kennard's Bays; from either of these until it intersects the line of the Canal in the township of Wainsteet, near Humberstone, the distance is only 4½ to 5½ miles. From this point it will be recollected the canal is nearly all full width and depth to the Deep Cut, so that this distance constitutes the greater part of the expense.

The only sound objection to the Canal's now tertimating near the Sugar Loaf, is that I ake Erie is free from ice above the Grand River earlier than it is at this place, which objection is well founded, and together with the inland trade from the interior formed the principal reason why this place was not selected in the first instance; but these reasons are at this time almost wholly removed by the construction of a boat canal from the Grand River, quite ample for all the produce from that country, and will admit the passage of all produce which may arrive at the Grand River before the ice is removed below. This will cause a reshipment, or a delay of the vessel until the Lake is cleared to the lower harbor, and is a fair consideration against the shortness of the passage during the remainder of the year, and the advantages of the situation for a harbor in cheapness and permanency. It may be questioned whether a vessel down the Lake with a fair S. W. or W. wind would not prefer passing down the Niagara River to making the Grand River and towing through the canal, when this being in a direct line would be seen to stop ! them as the length of the canal would not be increased and the whole circuitous voyage of 44 miles saved.

To finish and complete the Canal on the present plan the ensuing season, the following sums must be provided:—

For finishing the towing path on the Nia-		
gara and Welland Rivers, and through the Deep Cut,	\$4.477	00
For widening the feeder from the Deep Cut to admit an ample supply of water	garage and the	
for hydraulic purposes,	32.615	74
For raising the embankment from the Deep Cut to Lake Ontario,	2,000	00
And for incidental expenses,	5.000	00
Lake Ontario on the original plan,	13,989	00
Making in all,	\$58,081	74
To continue the ship canal	,	
to Luke Erie above Sugar		
Loaf will require to exca-		

Loaf will require to excavate Canal 4½ miles,... \$74,128
Harbor, (supposed).... 15,000
Additional expense for deepening the Canal from the junction to the Deep Cut, 22,155

111,283 00

Total,.... \$169,364 74

Respectfully submitted,
ALFRED BARRETT.
Principal Engineer.

To the President and Directors of the Welland Canal Company.

# No. 3. PROSPECTUS.

The great natural facilities presented by the connexion of Lakes Erie and Ontario by a Ship Navi-GATION, and the advantages which the Commercial and Agricultural interests bordering on and above Lake Erie must derive from an establishment combining regularity, celerity, and cheapness of transportation having been taken into consideration by a few individuals, they have thought proper to submit to the public the following outlines of a plan to form a Company for that purpose, to be called "THE ERIE AND ONTARIO TRANSPORTATION COMPANY," with a capital of \$100,000 or £25,-000, Canada Currency-to be divided into 1000 shares of \$100 each. With this amount it is intended to build a small steam boat on Lake Erie, containing two engines of 40 horse power each, for the purpose of plying between Cleveland and the Deep Cut, Welland Canal, and either to purchase or build two steam boats on Lake Ontario, with similar power, to ply between the Welland Canal Harbor and Oswego, and the Welland Canal Harbor and Prescott-which ports, viz: Oswego, Prescott, and Cleveland, they are to leave regularly twice a week, or as often as practice and experience may prove to be necessary. To this line there will be TWELVE

schooners attached; two of which will be constantly at each port, to receive whatever may arrive destined to or from the New York or Montreal Markets, serving the purpose of store houses similar to the North River tow-boats—to pass through the Welland Canal without breaking bulk—meet their respective steamers, and be conveyed to their respective places of destination.

The Company will agree to receive produce at Cleveland, or any other port on Lake Erie, which they may hereafter select, and deliver the same either at Montreal or New York, and vice versa, at stated prices, and in a given time.

They propose making a specific contract with some one on the line of Canal boats on the Eric Canal, for the conveyance of produce and goods between Oswego and New York; and likewise with some established Company between Prescott and Montreal, if it can be done at moderate prices, and conformable to their regulations; otherwise they will extend their operations to both those ports di

Gentlemen will be appointed to receive subscriptions at the following places, viz:—New York, Albany, Syracuse, Osweg, Montreal, Quebec, St. Catharines on the Welland Canal, Buffalo, and Cleveland, in the State of Ohio. Each person to pay five per cent on subscribing; which money is to remain in the hands of the gentlemen appointed to receive it until the whole number of shares is subscribed, when a general meeting of the Stockholders will be called to appoint a committee of five, to be elected annually, under whose management the designs of the Company will be carried into effect.

The natural advantages this route possesses is simply in the prolongation of ship navigation. It is well known that a great proportion of the expense of transportation consists in loading, unloading, and port charges. Goods are conveyed from England to Montreal for \$5 per ton, a distance of 3200 miles; and \$5½ is considered a feir price from Liverpool to New York, which is the same distance; whereas, the current price of freight from Quebec to Montreal, 180 miles, per steamboat, is \$1½ per ton. In order that it may be more clearly understood, the following numerical calculation is subjoined:—

The present price of transportation between Cleveland, in the State of Ohio, and New York, is as follows:—

as follows:		
Cleveland to Buffalo, 180 miles	\$ 1	75
Storage at do	0	75
Buffalo to Albany, 362 miles, at 3 cents per		
ton per mile	10	86
Albany to New York, 150 miles	1	50
	\$14	86

The lowest price for freight down, or eastward, is \$14 50 per ton.

The price now paid from New York to Buffalo is \$19 89 per ton; to which add \$1 26 for storage and \$1 75 for lake navigation—making a total of \$22 90 for freight up, or westward.

By the Welland Canal route :-

Cleveland to Fort Maitland, Grand River,	
Lake 260 miles 198 Oswego to Albany	\$ 2 17
239 miles Canal, at 3 cents per ton per mile	7 17 1 50
	\$10 84
For return freight between New York and Cleveland, add for 239 miles canal navi- gation, 1½ cents per ton per mile, being	en egal. En egal.
the additional toll, up	3 58
Additional river freight from New York to Albany	1 00
	<b>\$</b> 15 42

Saving in descending \$4.2 per ton, and in ascending \$7.48; and we shall likewise gain one or two days in time.

It will be observed that the greatest length of Ca nal navigation is allowed, as by the Niagara and Welland rivers there is only 164 miles from lake to lake.

This route may be so arranged that passengers may be taken from Cleveland to Oswego in two days.

The present price of transportation from Lake Eric to Montreal, and vice versa, is as follows:—

Lake Erie to Chippawa.....

Chippawa to Queenston 11			
Storage at do			
29	mile	2g	
per ton	£1	2	6 -
Queenston to Prescott270	0	12	6
Prescott to Montreal120	1		. 0
	£3	0.	0
Montreal to Prescott, up	. £3	15	0
Plescott to Ontario	. 1	0	0
Ontario to Erie	. 1	17	6
	£6	12	6

By extending this navigation so as to embrace the whole length of the lakes, it is expected to convey produce from Cleveland, in the State of Ohio, to Montreal, as follows:

	Milles.	
Cleveland to Welland Canal	140	170
Welland Canal to Prescott		\$3 42
Length of Welland Canal		1 23
Prescott to Montreal, down	120	<i>6</i> 00
T-4-1 40 0- 24 C-	Z71	60 66

Montreal to Prescott, up	£3	15	0
Prescott to Welland Canal, and Welland	٠.		
Canal to Cleveland	0	17	1
Through Welland Canal, 41 miles, at			
	0	9.	. 3
and the state of the state of the state of the state of the state of the state of the state of the state of the			

£5 1 4

Making a saving of 11s, 9d, per ton on the present price down, and £1 11s. 2d, per ton up; besides including the distance from Cleveland to the Welland Canal, 140 miles. Thus a barrel of flour, which now requires \$1 50 from Cleveland to Montreal, will only cost \$1.

The vessels on Lake Ontario, destined to carry produce to Prescott, will be British bottoms, and those to Oswego, American.

#### No. 4.

## MINUTES OF BOARD FOR 1829.

At a Meeting of the Directors held at York, January 1st 1829.

#### PRESENT:

The Hon. John H. Dunn, President.
H. J. Boulton Esq, Vice President.
The Hon William Allan,
John B. Robinson, and
Wm. Hamilton Merritt, Esqrs.

Mr. Merritt having attended at the request of the other Directors, submitted a Report from Mr. Geddes of a Survey made by him and Mr. Barrett, for the purpose formerly considered by the Directors, the result of which survey appears to make it inexpedient to proceed in the plan of taking the water down from the Grand River above Bears foot Rapids by a Feeder—a difficulty occuring from a height of land in a place where it was not anticipated.

Mr. Geddes fully confirms by his opinion the judgment of Mr. Barrett formerly expressed in favor of damming the Grand River near the mouth, and thus obtaining a few feet rise of water upon the level through the marsh.

After discussing several propositions submitted to the Board, it was Resolved, by the Directors that the most expedient is to dam up the Grand River near the mouth—to proceed in cutting through the marsh for a Feeder to be conducted to the bank of the Welland, at or near Helm's Creek—construct an Aqueduct over the Welland at that point, and dig a Feeder from thence on the North side of the Welland er from thence on the North side of the Welland to the Deep Cut—construct two Locks by which Vessels may ascend from the Welland to the Deep Cut upon the proposed level to be procured by means of a Feeder along the Welland.

Feeder from Grand River,	26,850
Dam on Grand River, and Aqueduct over	
the Welland,,	15,000

æ90,000

Assuming these calculations as they have been described to be made with care, to be reasonably correct, the Directors Resolve, That Contracts shall be entered into for the several portions of this work to be done with as much expedition as shall be adventageous.

By the expenditure of a sum upon which they can recken as they trust with certainty, they shall with the least possible delay complete a Navigation capable of having it used with Schooners from Lake Erie to Lake Ontario—the part of the channel already finished from the Deep Cut to Lake Ontario will be brought as soon as possible into use, which is very desirable for the proper preservation of the Locks—the practicability of the whole work would be established—the hydraulic advantages will be realized—and as the Locks will be constructed with a view to Sloop navigation, nothing will remain but to give to the Canal from the Welland to Grand River sufficient depth and width for navigating by Sloops and Schrs.—a work which can be effected in the winter, and respecting which there can be neither doubt nor difficulty.

To carry this plan into effect the Agent is authorized to let out the Locks and necessary evcavation at the Deep Cut immediately, at the estimate of the Engineer, and that public notice be given that the remaining parts of the work will be let out by Contract on Saturday the 31st instant.

It is however determined by the Board that no Contract for the dam across the Grand River shall be entered into unless the Contractor shall give undoubted security to be approved of by the Directors at a special meeting, that he will complete it for the price agreed upon, and that it shall remain good and substantial 5 years.

It is also directed by the Board that the expenditure of any money between the Deep Cut and Lake Ontario shall be forborne to the latest period consistent with the due preservation of the work already done, and with the having that portion in readiness to be used when sufficient water can be brought through the Deep Cut.

And that the making any Contracts for the towing path down the Welland River, and the Cut at the mouth be also postponed to the latest period that will admit of its being finished, so that it can be used for Navigation upon completion of the works required to bring the water through the Deep Cut.

January 21st, 1829.

At a meeting of the Board of Directors, at St. Catharines.

#### PRESENT:

H. J. Boulton, Esquire, Vice President, George Keeser, and William Hamilton Merritt, Esquires. The minutes were read and confirmed. Mr. Adams' proposal to rent the mills formerly belonging to Mr. Merritt was read and accepted on the following terms, viz:

Nevertheless if the water does not come down this year only £50 is to be paid the second year, and £75 the third. Mr. Adams is authorised to creet machinery and to have the refusal of the premises after the expiration of the term of 10 years, at a rental according to the then value of the mill privilege, &c., and if such valuation is objected to the creetions and improvements made by Mr. Adams to be valued by two experienced mill wrights and paid for by the Company.

It was moreover agreed to purchase 2½ acres of land adjoining the said privileges—to be paid for next June, if the Company is in funds, if not, as soon as the Canal is finished.

Advertisements having been issued for proposals to be received this day for creeting an acqueduct across the Welland River—a dam across the Grand River, and to excavate a feeder from the Grand River to the Deep Cut: the Board proceeded to examine the several proposals, when the following being the lowest, they were approved of, and contracts ordered to be entered into with the respective persons accordingly, viz:

Brush Dum across the Grand River, as per plan and specification, £2,625.

Lock adjoining do. at the same price as others now erected on the canal of like dimensions.

Embankment 18 cents per cubic yard.

Lock-pit, Embankment and Puddling, as per Estimate of Engineer.

Messrs. Wilkinson, Simpson, Monson, and Pratt. Mouth of River Welland.

11 or more chains excavation 12 cents per cubic vard.

Messrs. R. Campbell and George Rowe £875. Aqueduct across the Welland.

Piles to be paid for extra, 7s. 6d. each.

Messrs. C. Phelps, Brundage, and Lewis.

Chopping Grubbing Excavat'n per acres per acres per acres Feeder 1 to 5-Lemen Ayres, & Co.... \$14 \$50 10 cts. 6 to 13-T. Mer-\$30. 14 do. 10 50 12 121 9<u>1</u> 9<u>1</u> 6 to 10 do. 10 to 13 do. 15 to 21-Peter 12 Keefer, & Co... 12 50 11 22 & 23-T.Mc-Mahon,.....24 & 25—-Mc-16 60 8 9 Gill, & Co..... 65 S 81 26 & 27-J.Ber ger, ..... 2S & 29— Scott and Galbraith, ... 103 30, 1, 3 4-Trotter, & Co..... 11 10 do. 10分 30 92 35 32—S. Sixsmith,

### Monday, 2nd February, 1829.

The Board, accompanied by Mr. Barrett, proceeded to the Grand River, to decide the best situation for the dam and lock, and examined the whole line of the Canal.

## Friday 6th, Saturday 7th, & Monday 9th.

The Board was engaged executing contracts and settling claims upon the Company which had been postponed until Mr. Merritt's return from England, and referred to him and Mr. Barrett.

Tuesday, Feb. 10, 1829.

At a meeting of the Board, held at Mr. Keefer's, Thorold.

#### PRESENT :

Henry J. Boulton, Esquire, Vice President.

George Keefer, and
W. H. Merritt, Esquires,

Directors.

The annual report was read and approved—200 copies ordered to be printed.

Resolved, That Messrs. Monson and Simpson have their final contract on the mursh continued, and that in consideration of the Company having made an alteration of the work it is ordered, that they be paid 13 cents per yard for the work abandoned, the one-eighth retained to be paid on the canal being finished, and not on completion of the feeder, unless the same is not continued within 12 months thereafter—in that case it is to be paid up.

Mr. Simpson having represented the necessity of cutting an extra ditch to drain the main feeder,

Resolved, That if in the opinion of the Engineer the ditch is necessary, he order it to be done.

J. Martindale delivered proposals to extend the waste weir at harbor.

Resolved, That he be required to submit a statement of the amount of damage for the future consideration of the Board.

6th April, 1829.

At a general meeting of the Stockholders of the Welland Canal Company, held this day, in pursuance of the act of Incorporation for the election of Directors for the year ensuing.

### PRESENT:

George Keefer, Esquire, J. B. Yates, Esquire, and W. H. Merritt, Esquire.

On close of the ballot the members were as follows:—

The Hon. John Henry Dunn	104
The Hon. William Allan,	104
John B. Robinson, Esquire,	
Henry J. Boulton, Esquire,	104
George Keefer, Esquire.	

who, with John J Lefferty and Robert Dickson, Esquires, chosen by the Legislative Assembly, constitue the Board of Directors for the year ensuing.

May 5th, 1829.

At a Meeting of the Board of Directors, held at St. Catharines, this day.

#### PRESENT

The Hon. John H. Dunn,
John B. Robinson, Esq.
John J. Lefferty, Esq.
George Keefer, Esq.
John J. Lefferty, Esq.

A ballot took place according to law, when the Honorable John Henry Dunn, was elected President, and Henry John Boulton, Esquire, Vice-President, for the ensuing year.

The Board being duly constituted,

The minutes of last meeting were read and confirmed.

The advance made by Mr. Dunn, since the last Board, on account of estimate, amounting to £3143 5s. 6d., was confirmed.

At an adjourned Meeting of the Board, held at St. Catharines,

FRIDAY, 8th May, 1829.

#### PRESENT:

The Hon. John H. Dunn, President. Henry J. Boulton, Esquire, Vice-President.

John B. Robinson,
John J. Lefferty, and
George Keefer, Esquires,

Directors.

The President and Directors on the 6th and 7th instant, inspected the Grand River in order to determine upon a proper site for the proposed dam, having found it necessary from the objections advanced by the Naval Department to abandon the further prosecution of the dam near the mouth of the River; after an examination of the banks it appeared to the Directors that it is expedient to construct the dam nearly opposite the limit between Moulton and the Indian lands, and about 4½ miles from the mouth of the River.

The change of situation having been communicated to Mr. Wilkinson, who in Company with Messrs. Monson, Simpson and Pratt, had agreed with the Company to build the dam at the place first selected near the mouth of the river, and it being requested of him to make an offer for constructing the dam in the place now chosen, having examined it personally in Company with the Directors—Mr. Wilkinson proposes on behalf of himself and the others above named to undertake it for the sum of £12,500, and to warrant it to stand firm and complete for one year from the time of its being finished.

The Board resolved to accept of the proposal on the condition that Mr. Wilkinson shall in person superintend the work constantly during its progress, and that it shall be completed by the middle of July, or so soon as the feeder from the Grand River to the Deep Dut shall be finished.

The guarantee of the work is understood to extend to the whole of the dam and to the proper and sufficient connexion of the abutments with the embankments. The proposal is founded upon the presumption that the Company shall procure permission for the gravel and sand to be taken from within the mouth of the Grand River.

It is also understood that the contractors shall have the option of making one half of the embankment on the South side of the Grand River upon the estimate of the Company's Engineer, and that whatever earth they may find it necessary to excavate to be used in making roads on the dam shall be allowed on the estimate of the Engineer, if made under his direction, so as to answer for the lockpit or feeder.

A lock is to be constructed in the dam in such place and of such dimensions as the Company's Engineer shall direct upon the same terms in proportion to the dimensions as was allowed to Mr Phelps for the locks last constructed by him—Mr. Phelps to be joined in the contract for the lock.

The contractors having applied to the Company for permission to occupy a site for a saw mill for the term of 10 years, offering to pay for the same at a rent of £18 15s. per annum, and at the end of the term the lessees to have the refusal at a rate to be thus fixed.

The Company will allow the contractors the use of the scows belonging to them until the work is completed.

Mr. David Thompson attended the Board and urged a claim upon the Company for compensation for loss in being obliged to relinquish his contract at the Deep Cut in November last in consequence of the slide which compelled the Company to discontinue the excavation.

He represented that he had then on hand 46 yoke of cattle which have been since in a great measure useless, and other stock which he still retains, and he wishes the Company to take the cattle off his hands.

Resolved, That Mr. Thomson be informed that they decline taking his property—that if he conceives he has any fuir claim to urge against the Company for loss on his contract he must prefer the same when the work is finished.

Resolved. That the Engineer be directed to proceed immediately to lay out the dam, embankment, and feeder from the Grand River, locating the dam at or near the situation to be pointed out by the Agent (being that which appeared to the Directors to be preferable) unless the Engineer finds some good reason for suggesting an alteration, which he must in that case report immediately to the Board, with an estimate of the probable difference in expense to be occasioned by such alteration—the site for the dam to be approved by Mr. Wilkinson the contractor.

Resolved, That the Engineer be required to survey the land that will be overflowed, describing the quality und quantity of timbered land, together with the names of the owners and occupiers, and nature of any improvement to be effected.

Resolved, That a circular be sent to every contractor, informing him that the time originally engaged for finishing the feeder be extended to the 1st of June, and that so soon after as his contract is finished and received by the Company he shall be employed with all his hands on another contract at the same price it is already contracted for, and continued thereon till the water is brought through, requiring at the same time that no greater extent of surface be broken up than each contractor can finish to bottom.

Resolved, That the Agent advertise for receiving proposals for excavating the Feeder from the main Canal to the Dam and one half the embankment opposite thereto on 30th instant, the same to be finished by 15th July, the Section to be laid out by the 20th instant and specification ready by the 25th.

Resolved, That Newlove and Porter be allowed to take 3 chains of their job on Canal to bottom.

Resolved, That Robert Campbell be allowed 14 cents per yard for his job at the mouth of the Welland instead of 12, originally contracted for, the excavation proving more difficult than was anticipated.

Resolved, That Mr. Phelps be recommended to advertise for sale by public auction all the Carts, implements, and property belonging to his job at the Deep Cut.

Many applications having been made for compensation for damage, and for land taken by the Canal,

Resolved, That George Keefer, J. J. Lefferty, and Wm. H. Merritt, Esquires, be appointed a Committee with power to negotiate with the several claimants and settle the amount of damage if it should appear to them just and reasonable—if not, such claim to be submitted to the Board.

Resolved, That Messrs. Wilkinson & Co. be advanced £250 on the Dam.

Messrs. Wilkinson & Co. presented an account of expenses incurred in preparing to erect the Dam near the mouth of Grand River, amounting to \$454, 50, besides timber and embankment

Resolved, That they be allowed \$\frac{1}{3}\$ the cost of the hay, the quantity to be estimated by the Engineer—\$15 for rent of house, and \$10 for shanty and black-smith's shop.

Mr. John Clarke's Letter, requiring further compensation for his services was re-considered.

Resolved. That the Board are of opinion that the compensation awarded to Mr. Clark is ample, and therefore they have not the power to alter their former decision.

Mr. Martindale's claim for compensation—referred to commutee appointed for such purposes.

Bell, & Co. applied for extra work, &c.—referred to Mr. Barrett—the House to be allowed them till the Company require it.

Decow's claim referred to committee.

Mr. Yate's letter to be re-considered next Board.

Mr. Barrett's application for increase of salary-deferred till next Board.

Shaver's application referred to committee.

Mittleberger's letter to be re-considered—Engineer to report.

Mr. Cumming's letter referred to Committee.

Resolved, That a letter be written to His Excellency the Lieutenant Governor for leave to take sand from mouth of Grand River.

July 2nd, 1829.

At a meeting of the Board of Directors, held at the Bank of Upper Canada, York.

#### PRESENT.

The Hon. John H. Dunn, President. Henry J. Boulton, Esq., Vice President, The Hon. William Allan, and John B. Robinson, Esquire.

The estimate of Engineer of work performed since March 10th was laid before the Board, amounting to £12,465 9s, of which £10,656 15s. 10d. has been advanced, leaving a balance of £1,808 13s. 2d., which was examined and ordered to be paid.

Mr. Merritt exhibited the following statement of the funds—A.

(COPY.)

July 2nd.

**V**4

In addition to which the mill privileges next year will produce £600—viz:—

 Lake Ontario
 £ 50

 Gr. Adams
 100

 St. Catharines
 100

 Phelps'
 50

 Kcefer's
 100

 Davis'
 100

 Aqueduct
 25

 Grand River
 150

— £625—which

will secure the interest on £10,000 without reference to navigation.

The above does not include the advances agreed to be made by the Canada Company, £6000, and by Ellice & Co. £15,000 = £21,000.

Messrs. Ellice having refused to comply with their agreement, and it appearing doubtful if the Canada Company will fulfil theirs, it was

Resolved, 1st. That the President, Mr. Robinson, and Mr. Merritt, call upon his Excellency the Lieutenant Governor this day, lay the statement before him, and ascertain whether he will guarantee the payment of a loan of £10,000, in case the Canada Company do not fulfil their engagement, in order that no delay may take place in finishing the canal, and that the money be timely provided for fulfilling the engagements of the Company.

Resolved, 2ndly. That the President draw immediately on the Court of Directors of the Canada Company, and accompanying the draft with an explanatory letter stating our present favorable prospect, and request Mr. Allan and Mr. Jones, the Commissioners of the Canada Company in York, to make their observations on the same.

Resolved, 3rdly. That the statement for August be drawn up and submitted to the Bank of Upper Canada to ascertain whether they will make the necessary advances thereon.

Ordered, That the Agent proceed immediately to the Marsh, and place on as many men as can be employed in accordance with the Resolution of 8th May last, with a view of having the same finished by the 1st of September.

August 13th, 1829.

At a Meeting of the Board held this day at Forsyth's Tavern, Niagara Falls.

#### PRESENT.

The Hon. John H. Dunn, President,

George Keefer, and J J. Lefferty, Esquires.

Directors.

The minutes were read and confirmed.

Mr. Clark's letter was taken into consideration deferred.

Messrs. Wilkinson's do. do. do.

The estimate for July was laid before the Board.....

£7068

on which account has been advanced £1500 and a draft was signed for ........... 4000

-- 5500

Loaving a balance due of

£1568

Mr. Phelps' and Mr. Thomson's application for mill seats at Grand River—deferred.

Mr. Robb applied to purchase a lot of land on the marsh—rejected.

Mr. Dawson's letter 11th June, was read-

Ordered, That a certificate be forthwith sent to Messrs. Bosanquet & Co., and that they be drawn upon for the amount of Mr. Blacou's stock according to the periods mentioned.

Mr. Phelps presented a proposal to build a small lock at the Grand River, including the excavation connected therewith for £225, which was accepted.

Resolved, That the buttments of the bridge at at Chippawa be 40 feet wide.

Resolved, That Carl's Farm be purchased for £625. The President agreed to give a draft to that amount—the deed to be made in his name till he is repaid.

Resolved, That Mr. Proctor's letter be referred to Mr. Yates.

Resolved, That the following letters be considered next Board—Mr. Misener—Mr. Barrett—Mr. Macdonald, and Mr. Mittleberger.

September 24th, 1829.

At a meeting of the Board of Directors, held at Niagara.

#### PRESENT.

Henry J. Boulton, Esqr. Vice President. George Keefer, J. J. Lefferty, and Robert Dickson, Esquires.

Many applications having been made for lots of land on Wainfleet Marsh, it was

Resolved, That lots of 50 acres each adjoining the Canal be leased for 5 or 10 years, with the option of the tenant purchasing the land at the expiration of the term at the lowest price which may be fixed on for the whole tract—or to pay him for its improvements.

Resolved. That the mill privileges on the line of the Canal be let for the term of ten years, as under. Grist mills, for each run of stones \$100 per annum. Saw mills, for each do. \$100 " and other machinery in proportion, and that notices be printed and circulated accordingly.

Resolved, That in order to meet the present expenditure, which is absolutely necessary to let in the water for the purpose of opening the navigation as well as placing the locks and other works in a state of security during the winter, it is expedient to obtain the sum of £10,000, which it is understood by the Directors the Lieutenant Governor will sanction, provided the Directors guarantee His Excellency from all personal responsibility.

It is therefore further Resolved, and the President, Directors, and Agent of the Welland Canal Company do hereby agree to save, defend, and bear harmless the Lieutenant Governor of this Province of and from all personal risk or responsibility for making such advance, and do moreover engage to see the said sum of £10,000 repaid within a reasonable time after the Canal is in operation.

22:1d October, 1829.

At a meeting of the Directors held at Bradley's Hotel, York,

#### PRESENT:

The Honorable John H. Dunn, *President*, Henry J. Boulton, Esquire, *Vice-President*. & the Hon. William Allan.

Resolved, That a Petition be presented to His Excellency the Lient. Governor to bind the Government to become answerable for the Loan of £10,000.

Resolved, That an application be made for a free passage of American Vessels, and that the Collector of Customs be notified thereof.

Resolved, That in order to preserve the banks of the Feeder, the Aqueduct, Towing-path, and other erections on the Canal—By-Laws be drawn up and a scale of tolls be prepared by the next meeting of the Board, and for the purpose of establishing a Turnpike Road.

Resolved, That the Lots of Land on the Marsh in Wainfleet and Humberstone be let for the term of 5 years at the rate of \$5 per annum for each Lot of 50 acres.

Resolved, That notice be given by the Agent that no person or persons be permitted to navigate the Canal at a rate exceeding three miles per hour.

29th October, 1829.

At a meeting of the Board of Directors, held at Bradley's Hotel, York,

#### PRESENT:

The Hon. John H. Dunn, President. H. J. Boulton, Esq. Vice President. & The Hon. William Allan.

It having been represented by the Company's Agent that to ensure a permanent and ample supply of water for all purposes, as well as to effect a perfect Boat navigation it is indispensably necessary to open the Feeder through the marsh to 20 feet bottom and slopes 2 to 1, and having every confidence that sufficient funds will be raised during the winter to pay the expenses thereof, it was

Resolved, That Messrs. Monson, Simpson & Co. be settled with, and their Contract be given up at the next meeting of the Board, and that in the mean time public notice be given that Contracts will be entered into for the above purpose on the 15th November or 1st December next—payments for which will be

made by the Company on completion of the work in April next.

Resolved, That the Towing-path on the Niagara River be repaired forthwith so as to answer the immediate purpose of towing thereon.

The Directors (feeling sensible that the Stockholders will not derive all the advantages anticipated on completion of the Welland Canal until it is extended to lake Erie by the upper route on the original extended scale, which they are not at present able to accomplish with their present funds) conceive it desirable that some person should be despatched to England to make an immediate application to the Home Government for a gratuity or Loan, and to dispose of the Stock on hand, and John B. Yates of New York, Esq., having consented to undertake the mission—it is

Resolved, That the Agent select from the Office such documents and papers as he may deem necessary, and deliver copies of them to Mr. Yates, and that a Report be laid before the Board at their next meeting, together with all such papers as may be thought necessary to furnish Mr. Yates with for the better securing the object of his mission.

The Bank of Upper Canada having loaned the Welland Canal Company £3000 for the purpose of paying off the laborers, and the sum of £7000 more being required to pay off other demands of the Company, the propriety of issuing Bills was taken into consideration. Mr. Yates, one of the principal Stockholders, being present, he was consulted on the subject, who thinks by making them payable at each of the Canal Offices—at St. Catharines, New York, or Montreal—arrangements may be made to establish nearly their full value—it was therefore

Resolved, That Bills of the following description be printed, and submitted to the next meeting of the Board—viz.

£12 10—One year from the date hereof—for value received, the Welland Canal Company promise to pay A. B. or bearer, the sum of Twelve Pounds Ten Shillings, with interest at the rate of six per cent, at either of their offices—St. Catharines, Montreal, or New York, the holder giving 30 days notice to the office when payment may be required, the above heing part of a loan of £10,000, authorised by the Board of Directors the 1st day of November, 1829, in witness whereof the said Company have affixed their seal the 1st day of November, 1829.

The Agent was required to furnish Mr. Yates with a copy of the above resolution, and to request he will take the earliest opportunity of furnishing the Board with the result of his application in New York to redeem the bills if required.

The Bank having agreed to lend the Welland Canal Company the sum of £3000 on the President's bond, payable in 12 months.

Resolved, That a bond be executed accordingly.

31st December, 1829.

At a Meeting of the Directors, held at the Bank of U. C., York,

#### PRESENT:

The Honorable John Henry Dunn, President, Henry John Boulton, Esquire, Vice President, & The Hon. William Allan.

The subject of addressing the Home Government was taken into consideration, when it was determined to send anapplication by Mr. Yates for the one—ninth cost of the Canal originally granted to the Company.

Resolved, That a petition be presented to the Legislature of Lower Canada to loan or take stock to the amount of £12,500.

The Annual Report was read, approved, and ordered to be printed, if no objection is made by the absent members.

Resolved, That a bill be drawn upon J. B. Yates, at 90 days, for £500, in favor of the Bank of Upper Canada.

## IN THE YEAR 1830.

During this year a very critical examination of the accounts of this corporation was entered into by a committee of the House of Assembly as will be more fully seen by reference to the proceedings & balance sheet, [hereto appended, marked No. 1.]

There was a grant made of £25,000, as will be seen by reference to the Act of Parliament [appended hereto, marked No. 2.] for detailed proceedings—widening route, making towing path on Welland, Niagara, and Grand River—reference is made to the minutes of this year [hereunto appended, marked No. 3.]—and also the annual report of the Directors for this year, [appended hereto, marked No. 4.]

The first Commissioner, Robert Randal, Esq., was this year appointed to examine and report on the state of the Canal. The Director of 1835 (Mr. Mackenzie) was a member of Parliament for that year, he was also a member of the committee who signed that report, and examined all the witnesses from the immediate neighbourhood of the canal at the time, most of whom it was supposed entertained feelings or prejudices against the work; he was the individual who actually drew up the report, and had all the books, vouchers, and accounts then before him—if wrong, why not then noticed? or why should he have there placed the following favorable commendation on them?

"Charges of mismanagement having been publicly made against individuals connected with the Com pany, among others by Mr. Gordon, once the Treasurer, and a relative of Mr. Merritt, and by Mr. Clowes, formerly an Engineer on the Canal, your Committee were more strict and careful in their examination of the books and accounts of the Company than they might otherwise have been, but although they have met with occasional charter ges against the Company, perhaps not so moderate in amount as would have been willingly paid by a private individual, and although the transactions in the books embrace an expenditure of a Million of Dollars and Upwards, they saw very litter the indeed to censure."

After all the investigation now made, but one solitary alteration appears on any item contained in that Balance Sheet—the payment to Mr. Phelps of £95 10s. 4d. which has not been satisfactorily accounted for. The letter from Mr. Gordon, Clowes, &c, are also noticed, and the greatest vigilance exercised in consequence. Again the same individual is appointed Secretary to the said Commissioner. He goes over and examines the entire line of Canal with the Commissioner, who quotes the following passage of the Act:—

"As the 13th Section of the Statute requires every minute and particular examination of the Deep Cut to be made in order to ascertain as far as practicable the probability there is of the stability or insta-bility of the Banks;" "also in addition," I have availed myself of the experience of a master carpenter in matters appertaining to his line of business, and obtained the advice and assistance of professional and other persons in whom I could place confidence in all such matters as seemed to me to require counsel and information. A great deal of doubt has been thrown on the stability of the locks, and perhaps some of them may give way-but I have not had reason to apprehend such casualty from anything which came under my observation. I examined the locks one by one very carefully as required by the Act, and consider them, upon the whole, as fine a specimen, both in design and workmanship as any others which have come under my observation on this continent. I ascertained, by enquiring at the carpenters, that the timber employed has been cut down at a proper period of the year, and not when full of sap and that it was afterwards seasoned. The Lock gates, however, should be made of sunk oak or timber that has been immersed some time in water, and afterwards thoroughly dried-such timber is difficult to work, but makes a superior job; and it is well known, that Canal lock gates are in Canada exposed to great changes of climate, being, from the duty they perform, neither wet nor dry. Has not the prediction of Robert Randall, Esq., the Commissioner, been verified by the testimony of Mr. Hall, in answer to question No. 133-and of Mr. Keefer in answer to 710, that only two of those locks have ever given way in foundation since the time alluded to.

With respect to Deep Cut, the Committee are referred to the passage under this head, in the Report of the Select Committee above alluded to.

The Committee will see by those documents, that a careful examination of the accounts were entered into in 1830. Mr. Black, the Secretary, was in attendance with the books—every account was at the time strictly examined, and every voucher produced and a favorable Report then made, at a time when every subject was fresh in the recollection of the witnesses, who were, from the immediate neighborhood of the Canal.

They will also see that the Directors of the Welland Canal for 1835, who drew up the Report above referred to for the Committee, also drew up the Report of the Commissioner Robert Randall Esq., who was appointed by this House for the express purpose of examining the Canal, by a special Act of Parliament—and that he was also associated with the Commissioner as an assistant in examining the Canal, as

will be seen by the following item in the Commissioners' account of expenses.

In another part of the Report he makes the following remark-

"I heartily concur with Captain Basil Hall in the opinion he has expressed 'that to Mr. Merritt's perseverance and knowledge of the subject, as well as his great personal exertions, this useful work stands mainly indebted for its success'".

Is it just towards the Directors or managers of that Company, after this rigid investigation by a Commission, to bring them under a second investigation for the same thing at this distant day? If so, are you most likely to arrive at the truth by taking his statement at the time he acted in the double capacity of "Sceretary and Assistant in examining the Canal," and when he availed himself, as he states, of the advice and assistance of "professional and other persons in whom he could place confidence in all such matters as seemed to require counsel and information"—or at this distant day, when it is apparent other motives and objects are in view.

During this year the navigation was not only imperfect, but the circuitous route by the Niagara River was found so tedious, that one more direct to Lake Erie from the Welland, became, from practical experience so apparent, that Surveys were made during the year, the Reports of which are hereunto appended. Widening the Feeder also greatly increased the expense, and it was deemed necessary to prevail on Mr. Yates to go to England to endeavor to dispose of the Stock returned on the hands of the Company by the Canada Company and others—also to prevail on the British Government to afford further relief. His report to the Company, and his letter to Sir George Murray, with the answer thereto, are appended hereto. [Marked Nos. 5, 6, and 7.]

The want of capital to procure material to convey produce &c. at this period, was likely to render this communication almost useless. Mr. Yates recommended the Company to establish Store Houses and provide the necessary material to draw a portion of the transit, as will be seen by his Report, in which the Board unanimously concurred—and John Clark Esqr. was appointed to superintend this Department. The Report of the Directors will give the general view of the proceedings—and the minutes a detail.

This year the following Directors were appointed by the Government.

John Johnson Lefferty, and Robert Randal, Esquires.

And by the private stockholders—
The Hon. John Henry Dunn,
The Hon. William Allan,
Henry John Boulton, Esquire,
Alexander Yates McDonell, Esquire, and
William Hamilton Merrit, Esquire.

Documents referred to in the foregoing remarks.

#### No. 1.

REPORTS OF A SELECT COMMITTEE OF HOUSE OF ASSEMBLY OF 2nd SESSION 10th PARLIAMENT, ON WELLAND CA-NAL, WITH BALANCE SHEET, &c. &c.

THE SELECT COMMITTEE appointed to inquire into the management and expenditure of the Welland and Burlington Canals; and to report their observations to the House; have examined the matters to them referred, so far as respects the Welland Canal, and have agreed to the following Report thereupon.

Your Committee began their investigation into the condition and management of the Welland Canal, by examining the several acts of the Provincial Parliament relating thereto; the Reports of Select Committees of former sessions; and the evidence on which these reports were founded.

Your Committee then proceeded to examine the Books of the Company, which were submitted to their inspection by Mr. Black the Secretary, and to investigate as far as was in their power the various statements of Canal resources and expenditure, which were laid before them by the Directors.

Your Committee obtained the testimony of Mr. Randal, Mr. Woodruff, Mr. Terry, Doctor Lefferty and Mr. Dickson,-all of them members of Your Honorable House, from the District through which the Welland Canal passes, and the two last named gentlemen being the Directors appointed by Your Honorable House, during its last session; they also examined Mr. Merritt the Agent, and Mr. Black the Secretary of the Company; Mr. Hamilton, an extensive land proprietor & ship-owner at Queenston, Lieutenant Wilkinson, a member of the House and who acted as an Engineer on the Canal, Mr. Mon-son, of St. Catharines, Mr. Whittlesey, of Ohio, and Mr. Marshall Lewis, an architect, who has been employed by the Company. It appears by the Statutes of 1824, that in January of that Year, the Welland Canal Company obtained an Act of Incorporation upon the Petition of Mr. Merritt, the present superintendent, with others his associates. Their capital stock was limited to £40,000; their shares were to be £12 10s. each; the navigation was to be for boats **W4** 

only of less than 40 tons burthen, with a rail road to descend the mountain, and at the end of 30 years the King was empowered to assume the property of the Canal, on paying to the Stockholders the amount of their shares, and a premium of 25 per cent.

The province was not required to loan any money towards the work nor to purchase any of its capital Stock, it being understood that it would be speedily completed by private enterprise.

It is worthy of remark, that in this outset of the work, the superintendant estimated the probable expense, including the railway, at a sum under £10,000.

In the month of August, 1824, the Board of Directors, employed Mr. Hall and Mr. Clowes, British Engineers, and Mr. Roberts from the United States, to survey the line of Canal and report the best route; these Engineers estimated the cost of a Boat Canal at from 15 to £23,000 only; and Mr. Hall remarked that the general dimensions of this Canal may be "afterwards" enlarged in sections "from an increased facility of boating stuff, stone, timber, &c., at less expense than by proceeding in the first place to execute a commensurate Schooner navigation."

In 1825, the Directors of the Welland Canal applied to the Legislature for authority to amend their charter, and on the 25th day of February, in that year, a resolution passed the House of Assembly, by a vote of 28 to 4, declaring it was expedient to increase their capital, to prescribe the place of commencement and termination of the Canal, and its dimensions and depth, and to take stock in the name of the province to the amount of £25,000. In April, that year, an act passed the Legislature increasing the Company's Stock to £200,000, in 16,000 shares of \$50 each, authorising the extension of the Canal for the purposes of Sloop navigation; and appointing the Bauk of Upper Canada, Treasurer to the Company.

In January, 1826, two acts were passed relative to the Welland Canal; the first to meet several unforescen difficulties in regard to private property and the line of Canal; and the second, to authorise the government to add £25,000 to the public debt, and to loan that sum to the Company for 3 years at inter-The Receiver General being required to take from the Company a bond to be made out in the manner and form he might "think most safe and proper." A Committee of the House of Assembly, were at this period, of opinion "that the remainder of the Company's stock would be taken up in England, and that the whole Canal would be completed early in the summer of 1827, for a sum within the amount heretofore estimated," [£180,000] nearly. And the President and Directors in their petition of date Nov. 12th, 1825, declare themselves " sanguine that its entire completion may be expected by the spring of 1827." The House of Assembly voted the loan by a majority of 21 to 12.

In the spring of 1827, however the sanguine expectations of the Directors were not destined to be fulfilled; for the stock was not taken in London; a variety of unforeseen and untoward circumstances "had occurred; and they deemed it necessary to solicit the Province to become partner in the Canal

to the amount of £50,000.—A Select Committee of the House of Assembly reported favorably to their views, because (among other reasons) they (the committee) conceived, after examining 17 witnesses, that from the moment the stock would be so taken, "the completion of the entire line of Canal" would be "placed beyond a question." In the House of Assembly the vote was very close, being 18 to 20, after a motion to reduce the sum to £25,000 had failed, by 11 to 26. In his evidence that year, Doctor Lefferty declared, that the Canal could not be completed for less than £300,000, the sum to which the Directors are now desirous to augment their capital stock.

As the Province had to borrow the £50,000, it was provided in the stock bill, that the Company shall pay interest on it until one year after the completion of the Canal; a provision which they have lately discontinued to comply with, although a bond has been given for its punctual fulfilment in the penal sum of £20,000.

Early in the year 1827, the Legislature of Lower Canada subscribed for Stock in the Welland Canal to the amount of £25,000, thereby manifesting a degree of solicitude for the prosperity and welfare of their sister Province, highly honorable and deserving of remembrance.

In the summer of 1828, Mr. Merritt visited England in the capacity of Agent for the Company, and obtained from His Majesty's Government, for 10 years, a Loan of £50,000 Sterling, towards completing the work, at the low rate of 4 per cent interest. He also was enabled to sell a number of Shares of Stock to private individuals.

"The disastrous slips at the Deep Cut," observes Mr. Geddes the Engineer, in his report of December 27th 1828, "present a certainty of expense in attempting to remove them, and great uncertainty as to the successful operation of any remedy proposed"—these slides obliged the Directors to adopt new plans and doubtless delayed materially the completion of the Canal. They had expended £60,000 "during the last season," according to their Report published in January 1829; and would still require £54,662 to complete the undertaking. They here acknowledge that "it seems that there is and must be in great undertakings of this description a precariousness against which neither sagacity nor experience can always effectually guard.

On the 20th March 1829, an Act was passed authorising the Company to assign the Welland Canal and the tolls and profits thereof, and all the funds, property and effects of the Company to an Agent of the Imperial Government, as a security of the principal and interest of the Loan of £50000 sterling, made to the Company in the year 1828. The same Act which authorised the Directors to borrow moncy to complete the Canal, and to refer certain disputes to Arbitration, incorporated a Company to make a lateral cut to Niagara, altered the Law relative to Directors of the Welland Canal Company, and required the President and Directors to lay an account in detail every year before the Legislature of their receipts and expenditure.

In June last the Directors addressed to the Stockholders an extra Report, in which, after adverting to Newspaper misrepresentation, they proceed to describe, at great length, the state and progress of the

work, hearing testimony "to the indefatigable exertions and judicious conduct of Mr. Merritt," as the Company's Agent; and expressing their continued confidence "in the ability of the Engineer, Mr. Barrett."

Towards the conclusion of this interesting Report they complain that "it has been their mortification" hitherto to find that while with the greater proportion of strangers who visit this Province, the Welland Canal seems to possess a particular interest, the inhabitants of Upper Canada, in general, appear to have the most imperfect ideas of the stupendous nature of this great undertaking, the rapid strides by which it is advancing to its consummation, and the immense advantages to themselves and to their country, which must inevitably follow the successful termination of a work that it is probable will be thought hereafter to reflect some degree of credit upon those by whose encouragement and exertions "it has been supported."

Your Committee have now arrived at the last report made by the Board of Directors, which has been given in evidence, and is appended hereto. It contains the very satisfactory intelligence that a schooner of 85 tons burthen, in company with a smaller vessel, passed between Lakes Ontario and Erie through the Welland Canal in the month of November last; thus at least demonstrating the stability of the locks and the near approach of the Canal towards completion.

By this report it will be seen that vessels drawing 7½ feet water, and not having more than 21½ feet breadth of beam, coming from any ports on Lakes Erie or Huron with produce, may sail down the River Niagara, and from thence by a canal at Chippawa, enter the Welland and pursue their voyage through the canal to Lake Ontario; the distance of artificial navigation being 16½ miles, and the number of locks 34.

It will be seen on a reference to the report of the Attorney General, that he is of opinion that the United States vessels may avail themselves of the great advantages expected to be derived from the Canal.

Charges of mismanagement having been publicly made against individuals connected with the Company, among others by Mr. Gordon, once the Treasurer, and a relative of Mr. Merritt; and by Mr. Clowes, formerly an Engineer on the Canal, your Committee were more strict and careful in their examination of the books and accounts of the Company than they might otherwise have been, but although they met with occasional charges against the Company, perhaps not so moderate in amount as would have been willingly paid by a private individual; and although the transactions in the books embrace an expenditure of a million of dollars and upwards, they saw very little indeed to censure.

Although your Committee spent much of their time examining the books, and found no error of moment, they are, nevertheless, aware that the important questions whether accuracy of measurement and impartiality in giving out contracts have been attended to in all such great undertakings, cannot be solved by the Legislature, but will depend upon the capability, patriotism, and fidelity of the Directors, Agents, Engineers, and other persons employed in the superintendence.

The accounts of the Company are kept according to a system laid down by Mr. Wenham, the Bank Accountant, by which, instead of being balanced annually or semi-annually, they are left open until the several sections of the canal shall be completed, a mode of book-keeping which, however convenient it may be to the Directors, does not render their task of inspection the more easy.

Appended hereto, [and marked A], is the Company's balance sheet, exhibiting the receipts and expenditures, with an abstract; also a statement of the contingencies [marked B.]

The only bad debt by which the Company has sustained loss is a sum of £3,428, lost in consequence of the failure of a Mr. Proctor in New York, who had acted as their agent.

The Company have already paid £4,583 12s. 11d. for real estate near the Canal, and for awards to individuals whose property has been used in its construction.

The Lower Canada Stockholders have paid in £12,825.—The New York Stockholders have paid £72,500.—The Upper Canada Stockholders have paid £2,462 18s.—And the New Brunswick Stockholders £500.

It appears that on a part of the loan from England the Bank only allowed a premium of 8 per cent, although the rate of Exchange was higher at New York at the time the bills were sold, while drafts on that city bore a premium here—nor has the Bank allowed the Company any premium on the instalments paid in New York, in Current money, by the Stockholders.

The sum of £600 and upwards has been paid by the Company in duties on the importation of tools, cattle and materials from the United States.

The expense incurred in excavating the Deep Cut was £86,223 8s. 5d. The cost of the harbor at Port Dalhousie, was £10,264 including the embankment.

The sum estimated as likely to be awarded to the Indians and other persons for damage done at the Grand River and elsewhere, is about £2,000.

The most pressing debts stated by the Agent to be due by the Company, and into the nature and extent of which Your Committee only made that partial enquiry which circumstances permitted—amount to £15,000, including unpaid awards, monies borrowed, contracts performed and labor done.

From an examination of the Company's balance sheet, Your Committee find that £179,514 12s. 6d., of capital stock has been paid in—that £55,555 11s. 2d., is due the Home Government—that £6448 5s. 10d., has been realised in premiums on exchange on London—and that £25,000, with interest, is due the Province, the expenditure amounts to £269,202 11s. 10d., of which £239,633 3s. 6d., is for estimates—£4,444 4s. 11d., for Engineers—£2,138 for salaries—£3,803 17s. 8d., for interest and duties—£4,780 9s. 9d, for certain contingencies, of which a detailed statement will be found in a document appended to this Report. [Marked B.]

On referring to the last report of the Board of Directors, we find that their expenditure is there declared to be £272,795, making a difference of about

£3,000, and for which the Secretary has promised to afford an explanation.—The Directors propose in their report, dated 31st December last, to admit produce upon the Canal for the ensuing year at very moderate rates of toll—a policy of which Your Committee approve, and which they consider likely to prove advantageous both to the Stockholders and the merchant.

With regard to the future management of the Welland Canul, Your Committee would respectfully submit, that in their opinion it is a work likely to become, ere long of vast importance to the trade and commerce of this country; being a ship navigation it will enable schooners to carry their cargoes from the most distant extremity of Lakes Huron or Erie to the Town of Prescott, on the River St. Lawrence, and from thence to Quebec or Halifax, after the navigation of the St. Lawrence shall have been improved. It will facilitate the conveyance of immense quantities of United States' produce to a British market. It will greatly improve the Western section of the province, and give confidence to settlers of capital and enterprise to purchase lands and make settlements therein; it will form the grand connecting link between the most distant parts of Upper Canada, bringing them nearer to ouch other for the purposes of commerce, and affording a stimulus to their growing industry; it will aid the manufacturing and shipping interests of Great Britain by extending the demand for her merchandise and manufactures; it will admit of being afterwards enlarged in sections to the size of the largest British ship Canals, upon the principle stated by Mr. Hall, whenever the increased wealth and commerce of the country require the alteration; and it will open the navigation into Lake Ontario, at a much earlier period of the year than that at which the Eric Canal is free from ice.

The 13,000 acres of Land, in Wainfleet and Humberstone, owned by the Company, and their Farms, three or four in number, on the line of the Canal, will every year become more valuable.

The water privileges owned by them will soon produce a handsome annual income. One of the witnesses estimated the hydraulic advantages at £1500 a year; another said they could spare water enough to turn 50 mills. Mr. Lewis, the Architect, considers that the water power may be increased to a very great extent indeed.

Should the House decline to offer further aid towards the Canal, it is the opinion of the Agent, as well as of several other witnesses, that it will not be in a perfect state of Schooner navigation next Spring, and it seems to be the general sentiment that the work already performed will receive material injury, if allowed to remain in its present state. A number of persons who have demands upon it for services rendered, or property made use of, would be greatly embarrassed and distressed, were the payment of their just debts withheld; and the advantages of the navigation would be altogether lost, were the work suffered to languish for want of funds.

Your Committee requested from Mr. Merritt a copy of the correspondence which had passed between him and the British Ministry on the subject of the £50,000 Loan, together with a copy of the Act of the Imperial Parliament authorising that Loan;

but these documents he had left at St. Catharines.-His explanation of the circumstances which had induced him, on behalf of the Company, to relinquish a sum, the equivalent of one ninth of the cost of the Canal, which the British Government had agreed to pay towards its completion, will be found in the minutes of evidence hereto annexed. Mr. Merritt is understood to have had a power of Attorney from the Board of Directors to act for them in England; but it appears to your Committee not a little extraordinary that the Lords of the Treasury should have refused to loan \$250,000, at 4 per cent interest, to an undertaking of such great national importance as the Welland Canal, upon terms less unfavourable, than such as involved the relinquishment of a sum, guarranteed to the Company by a solemn Act of the Legislature now in force in this Province, [or from £15,000 to £30,000] and also an actual surrender of the Canal itself, with its tolls and profits, into the hands of an Agent of the Government by way of security; and in preference to Stockholders who had at that time expended £150,000 upon the work, and who were also about to expend upon it the £50,000 then borrowed.-Mr. Merritt's statement is, that the Chancellor of the Exchequer offered to give £27,000 towards the Canal, or to lend the Company £50,000 and that they accepted the Loan, "our necessities" says Mr. Merritt, "compelled us to forego the offer-"ed grant of £27,000, and to accept the Loan of " £50,000; but we still expect to get the £27,000."

As the important question, whether a further sum should be granted in aid of the Welland Canal, and, if so, what sum should be given, and under what cir cumstances a grant ought to be made, will come more immediately under the notice of the Select Committee appointed to consider and report upon the Petition of the President and Directors, praying for aid, your Committee have reported the evidence, taken before them on the subject without expressing an opinion as to the measures which may be deemed expedient hereafter to adopt.

All which is respectfully submitted.

## APPENDIX TO FOREGOING REPORT.

MINUTES OF EVIDENCE.

Committee Room, House of Assembly, Friday, Jan. 15th, 1830.

Committee met.

PRESENT.

Ambrose Blacklock, Esq. Caleb Hopkins, Esq. W. L. Mackenzie, Esq. George Lhugley, Esq. and William Woodruff, Esq,

DOCTOR BLACKLOCK, in the chair.

JAMES BLACK, ESQUIRE, called in and examined.

You are Secretary to the Welland Canal Company, are you not?—I am.

Can you furnish this Committee with an account of the receipts and expenditures of the Welland Canal up to this date?—I produce the same. [See paper marked A.]

Can you furnish this Committee with a statement in detail of the Company's contingent expenses!— I have prepared such a statement in regard to the contingencies, and now produce the same—the other seems are to be found in the estimate Book. [The mitness here handed in the paper marked B.]

Upon what principle did the Bank of Upper Canada charge one half per cent upon £3,000, remitted by them to New York, on the 12th Nov., 1828?—It was a customary charge.

What losses have the Company sustained by bad debts?—We have lost £3,428, by the failure of T. Proctor, in New York—I know of no other loss.

What is the amount paid by the Company for real estate near the Canal, and for awards to individuals whose property has been used in its construction?—£4583 12s. 11d.

WILLIAM HAMILTON MERRITT, Esquire, called in and examined.

What capacity are you in with the Welland Canal Company?—I am agent.

What sum has been subscribed and paid by the New York Stockholders in New York to the Welland Canal?—£71,495.

In what manner did they pay this amount?—By instalments in current money of the City of New York, to Yates and McIntyre, the agents to the Welland Canal Company.

Did the Bank allow any premium to the Company on the New York money?—None.

Did the Bank advance money to the Directors without a charge in anticipation of the New York instalments becoming due —Yes—the Board called in an instalment monthly, as the work required, and drew bills generally through the Bank, at 30 days sight, and perhaps 60. I conceive the Bank were the gainers of the difference of exchange, as it never was allowed the Welland Canal Company.

What premium was obtained upon the £50,000, loaned from England, and upon the other monies obtained from thence?—On £7,500, eight per cent—on £22,500, eightand a half per cent—on £3,700, nine per cent—on £20,000, nine and three quarters per cent—and on £10,200, ten per cent.

At what period did the Bank allow the Company the eight per cent on £7500?—In August, 1829.

When was the sum of £22,500, sold to the Bank at the eight and a half per cent?—The Bank had had that money in their hands from November, 1828, which was the period at which the Company drew

the money, lent them by the British Government. The bank credited the Company with the premium in March, 1829.

To whom were the Drafts sold?—All of them to the Bank of Upper Canada.

Has the Bank of Upper Canada, acting as Treasurer for the Welland Canal Company, conferred any advantage on the Company?—I think it has conferred no advantage.

What amount of duties has been paid by the Canal Company on importation of tools, cattle, and materials from the United States?—£631 19 2.

Can you lay before this Committee the Contract or Contracts originally entered into with Mr. Oliver Phelps, for excavating the Deep Cut; with such additional agreements as may have been since entered into with him relative to that undertaking?

We could do so by sending to Saint Catharines.

Do you record in your day-book or waste book, all Contracts made with persons who agree to do work upon the Canal; that is, the rates per yard, or per 100, or as the case may be?

We merely preserve the original Contracts as matters of reference, acquainting the Engineer of their contents, for his guidance in the estimates, in the superintendance of the work.

What has been the expense incurred in excavating the Deep Cut?

£86,223 8s. 5.

What have the Company paid on the average for the Locks up the mountain?

About three thousand dollars each.

Does not the damming up of the twelve mile creek below Saint Catharines, render the neighbourhood unhealthy?

It has made it much more healthy.

What has been the cost of the Aqueduct you have thrown across the Welland?

£1,575:

Of what materials is it constructed?

Of wood.

What was the cost of the Grand River Dam?

Twelve thousand five hundred dollars.

What was the expense of the embankment on the opposite side?

About three thousand dollars.

What sums do you expect to pay to the Indians, and private persons, for property taken for Canal uses, or overflowed on the Grand River and elsewhere?

About two thousand pounds.

Has the last year's interest on the Provincial Loan to this Government, been paid by the Company?

It has not.

What landed property is there belonging to the; Company?

X4

13,000 acres in Humberstone and Wainfleet, and three or four valuable farms on the line of the Canal.

What may be the value of the water privileges owned by the Company?

Within two years they will bring us £1,500 a year.

Did not the British Government agree to pay towards the completion of the Welland Canal, £16,000 on certain conditions?

They did.

What were the conditions?

They agreed to do so on condition of the passage of a Law exempting the King's stores from toll, and making the Locks 22 feet wide, which has been done.

Why then have you not had the money?

On the application for a Loan of £50,000 from the British Government, the Chancellor of the Exchequer proposed either to give us £27,000 sterling, payable as follows: £10,000 the first fear, and £17,000 the next, or to Loan us £50,000. Our necessities compelled us to forego the offered grant of £27,000 and to accept the Loan of £50,000; but we still expect to get the £27,000.

What is the amount of the Stock subscribed in Quebec and Montreal, the instalments on which were paid into the Lower Canada Banks—including the Government Stock?

Thirty-seven thousand eight hundred pounds.

Did Mr. William Walker, the Agent at Quebec, charge a half per cent for merely receiving £25,000 from the Government, and paying it into the Bank?

He did—he charged £169 16s. 2d. on the whole of the transactions, besides contingencies, being 1½ per cent premium on the private Stock, and one half on the Government Stock.

Did any charge, of agency or per centage, take place in London, in lifting the Loan of £50,000 from the Treasury to the Bankers?

None whatever.

Did the Bank of Upper Canada allow you a premium on these Lower Canada monies?

No

What was the amount of contingencies charged by Mr. Walker, in the Quebec transactions?

Thirty five pounds sixteen shillings and nine pence.

What did Messrs. Ellice & Co. of London, charge the Company as contingencies on the £50,000 loan?

Only the stamps they paid, amounting to £2 12 9.

What charge did the Montreal agent, Mr. George Davies make?

A corresponding one to that made by Mr. Walker.

What sum did the Harbour at Port Dalhousie cost?

£10,264, including the embankment, Lake Lock, and a part of Section 34.

What is the amount of debts due by the Company? \$15,000; including unpaid awards; monies borrowed, Contracts performed, and labour done:

In case you fail in obtaining a further Loan will the Canal be navigable in the Spring, between the two Lakes?

It will not be in a perfect state for Schooner navigation.

Are the Stockholders in New York perfectly willing that an Act should be passed here increasing the Company's capital?

They have not been consulted, but I see no injury that can arise from the measure, which would certainly place us out of debt, when the Stock was sold.

Can you furnish this Committee with a copy of the annual Report of the Board of Directors, for the last year?

I produce the same (see appendix C.)

What is your practice in regard to sales and leases of the Company's lands or water privileges?

We sell none, but grant leases for ten years: after which the Stockholders will be betterable to determine as to the manner of disposing of them.

How many Engineers do you now employ?

One principal and two assistants, who have an annual income of about £800, but they will not be much longer wanted.

When will the Feeder be so widened as to admit of a perfect Boat navigation, between the Welland and the Grand River?

By the first of April, the hands are now working on credit.

Do they accomplish as much work as if they had their daily pay?

The work is not done so low as if regular payments were made—but the men have worked as faithfully as could possibly have been expected.

Committee Room, Saturday, January 16th, 1830.

PRESENT.

Amb. Blacklock, Esq. Chairman.

Messrs. Mackenzie,
Woodruff,
Hopkins, and
Longley.

JAMES BLACK, ESQUIRE, again called in and Examined.

Who are the principal creditors of the Company, amongst the Contractors?

Phelps and Co. who have finished the new Feeder-Monson & Co. who have finished nine miles of Marsn-Donaldson, Davis & Ce. on the Marsh and Deep Cut—and perhaps forty or fifty other persons who have demands for smaller sums, being balances on their estimates.

How do you make up the sum of £5,352 1s.6d: in the annual report of last year as being due to individuals for lands, damages, &c ?

By the ambunt of awards to Carl, Burger, Silverthorn and others; and the loans in statement, together with the Grand River claims. Have you any other information to submit to the Committee?

I am desirous to submit an extract from a Letter I have just received from Cleveland, on the Ohio, relative to the quantity of produce likely to pass the Welland Canal from that place. (Here the witness shanded in the paper marked E.)

ROBERT RANDALL, Esquire, one of the Members of the House of Assembly for the District of Niagara, called in and examined.

Are you personally acquainted with the state of the whole line of Canal? No.

The Committee understand that you were a passenger in one of the Vessels that passed through the Canal, on a part of the route, and would wish such information respecting its condition as your personal observation may have suggested? I was a passenger on board of one of the Vessels of 85 tons burthen, and my impression was, that the Canal admitted the vessels with much despatch; it took about seven minutes on the average to pass a Lock. As to the permanency of the Locks, I am not a sufficient judge to form an opinion, but my impression was favorable. The whole of the excavation of the Canal, as far as I am able to judge, is good and permanent.

Do you know of any accident happening to the Canal, or any part having given way, of late?—No; not any knowledge personally.

Are there frequent complaints in the District, respecting the conduct of Directors in taking or using the property of individuals for the uses of the Canal, and not paying them for the same?—I have heard complaints of those, through whose lands the Canal passed, that they were not satisfied for the same, though I have not heard of late; not since the Arbitrators settled the damages sustained by the inhabitants.

How long have you resided in the Niagara District?—Upwards of thirty years.

What advantages may be expected to be derived from the Welland Canal when completed?—I think the benefits that will be derived from connecting the waters of the two great lakes Erie and Ontarie, will afford a most important advantage to the important export trade, to and from the Western section of this Province, as well as that part of the American territory connected with the waters of Lake Erie.

What advantages will accrue to the agriculturalists, on Lake Erie?—It will give an easy and safe transport to the productions of the country, and in floating of their timber for market.

Is the canal becoming more popular in the Niagara District?—Since it has got into its present progress and state, I think it is.

Do you think that when the Canal is completed it will tend to increase the settlements on the lakes. Eric, Huron &c.?—I think it will. It will tend no doubt, to promote the agriculturalists' interest over a territory having an uniterrupted inland navigation of supwards of 2,000 miles.

JOHN J. LEFFERTY, Esquire, Member of Assembly for the District of Niugara, called in and examined.

What has been the management of the canal, since you have been a member of the board of Directors?

—I think it has been correct and good.

What is the present state of the Canal, from your personal observation?—I am of opinion that the Canal may be finished early in the spring, so as to admit of vessels, of at least 7½ feet of water passing from lake to lake.

Do you consider the work done of a permanent character?—I think there are two or three of the locks will need considerable repair, and that some of them will not be permanent, but they have already surpassed my expectation; the excavation I am no judge of, but there have been no slips lately not since the water has been let in.

Have you any idea what sum of money will be required to complete the navigation of the Canal?—I am of opinion that if the Canal shall be completed up to take Eric, via the sugar loaf Settlement, it will be of far greater advantage to the country, than if it were to be finished only to the Welland River, there would be no locks on the direct line from the Welland to Lake Eric below the Sugar loaf Settlement, and the voyage will be shortened at least forty-four miles. The probable cost of completing the Canal to the Welland, I am not able to say, but if it is left in its present state, even for another year, what has already been done will gradually go into decay, and the navigation cannot be kept open. If it is ever to be finished, it ought to be completed immediately.

As a Director you have no doubt made full enquiry into the expenditures, mode of taking contracts and other matters connected with the monied transactions of the Canal. Are you satisfied that its monied matters are prudently conducted ?—I dislike the system on which contracts have been given out—too large contracts are given out to one individual. That individual lets them out in similar sections to subcontractors, and these often wrong their workmen. I think that no larger section should be given to a man than he can personally superintend, and give security for. By the present system the principal contractor lets out jobs to others at a lower price than his own estimate, and these sub-contractors frequent-The Company are ly run away with the money. not the losers; their contracts have been done low, but the poor labouring men have suffered greatly.

Are you of opinion that the Canal stock will be profitable 2—Think that it will not.

JOHN A. WILKINSON, Esq., (a member of the House of Assembly) called in and examined.

The committee understood that you have personal knowledge of the present state of the whole route of the Welland Canal, and are desirous to learn your opinion as to its condition, and also regarding the probable expenditure, which you suppose would be necessary to make it navigable —I was employed as an Engineer by the Welland Canal Company for six months, last summer; I had therefore an oppor-

tunity of being acquainted with the Canal generally, and I consider the state of the excavation between Port Dalhousie and the River Welland to be good and permanent. As far as wooden locks can be made permanent, I consider these locks to bear that character. Perhaps they will have to be repaired, at least that part above water, once in eight years; two of the locks have bent or sided in a little, perhaps 5 or 6 inches, which may have been occasioned by exposure to the weather before the water was let into the Canal. To complete the whole route and render it navigable to Lake Erie, by the internal route, I presume that an additional expenditure of thirty or forty thousand pounds would be required.

What advantages does your section of the country expect to derive from the Welland Canal, after it shall be completed?—The lands on Lakes Erie and Huron would be very much increased in value; we could then afford to send staves, lumber and other weighty articles to market.—Our tobacco is a very bulky article; by the operations of this canal, the farmer will be enabled to send it to market at less expense—by greater quantity—and in better condition. The damage and trouble of trans shipments, and land carriage of goods and produce would be avoided. In short, it would be the making of the Western Country.

Do you consider that the Canal will, ere long, be profitable to the Stockholders?—Not immediately; but ultimately I think the stock will be very profitable.

Should the canal remain for a season, or two, in its present unfinished state, what would be the consequence to the work, and to your section of the Province?—If the canal is allowed to remain long in its present state, what has been left unfinished will be liable to sustain great injury; and even the finished parts: ill suffer.—The inhabitants of the Western country would be much dispirited and disheartened; and property would suffer a consequent depreciation.

Will the hydraulic advantages of the canal be of much value to the Company?—Certainly, and to the country also.

Will the internal route, when completed, be open earlier in the Spring, than the grand Erie Canal?—It will be open about six weeks earlier, because the lake contracts below Sugar Loaf Point, and the Westerly winds prevailing in the lakes, force all the ice down towards Buffalo, where it remains until it is is either dissolved by the Sun, or gradually floated down the River.

WILLIAM WOODRUFF, Esquire, one of the Members of Assembly for the Niagara District, and a member of this Committe, examined.

What is your opinion of the Welland Canal?—
My opinion is, that it will ultimately succeed, if
means can be found to carry it on. The works
stand very well, much better than I had expected;
I think it will not materially benefit the Niagara District, except in respect to water power for machinery.
It will injure the frontier as much as it will benefit the
line of canal; but I believe it will prove of material
advantage to the upper parts of this Province, per-

haps more so than is to be now anticipated. I think, however, that its advantages would have been much greater to the country in general, had it been located in the interior.

Was the management of the Directors, in your-opinion, prudent in respect to the Deep Cut, previous to the slides which took place in 1828 — It know of no mismanagement on the part of the Directors in monied matters, but I think they were too careless, in not having bored in different places of the line of canal, especially in such a place as the Deep Cut, to ascertain whether there was a rocky bottom or quicksand.

Mr. Horatio Nelson Monson, Merchant of St. Catharines, called in and examined.

Are you a Contractor on the Welland Canal?-.

Do you consider the estimates at which the Company have contracted for the excavation, in general as being fair towards the public?—In eight cases out of ten the Contractors have been losers, often to a considerable amount.

Is the work already done of a stable and permanent character?—I should consider it so.

What advantages do you expect to be derived from the Welland Cunal, after it shall have been completed?—I should imagine that the inhabitants on the North shore of Lake Erie, would be materially benefitted, as they would obtain an easier conveyance to market. To the people on the South shores of the lake the advantages must also be very great as they will then have a choice of markets.

Are you a Stockholder of the Welland Canal?-I. am not.

Do you consider that its stock will be valuable in a short time?—I have no doubt but that it will payfor itself in thirty years.

MR. FREDERICK WHITTLESEY, Councillor at Law, Elyria, Ohio, called in and examined.

Do you think that when the Welland Canal shalf be completed, the produce of the Western Country, especially of Ohio, will pass down to New York through it on cheaper terms than if carried on the Erie Canal?—I think it would, if allowed to pass through the Welland, on the terms stated in the last report of the Directors.

What quantity of produce do you expect to bring down through the canal, from your side?—I cannot form a correct statement, but it would undoubtedly be very great. We hope that the Welland Canal will give us a choice of markets. Six thousand barrels of Pork are expected to pass through the Welland next Spring from one or two houses in Cleveland, (Ohio,) alone, for the Newfoundland fisheries, besides what may be forwarded by other establishments.

ROBERT DICKSON, ESQUIRE, a Member of the Hovse of Assembly, called in and examined.

What has been the management of the Welland Canal since you have been a Member of the Board of Directors!—As far as my information has gone, I have seen nothing to condemn in its management, either before I came a Director, or since.

Are its monied transactions prudently conducted?— Since I have been a Director, they have been conducted to my satisfaction.

What is your opinion as to the advantages hereafter to be derived to the Province from the Welland Canal, or side cut to Niagara, when these shall have been completed?—As respects the utility of the Welland Canal to the country generally, I anticipate great and incalculable advantages from it. But the Western and Niagara Districts will most materially benefit after its completion. I never did, nor can I bring myself now to believe that the individuals, or Government, as Stockholders, ever will realize one per cent from the enterprise. I look to the Town of Niagara as likely to derive great advantages by getting the water there for hydraulic or other purposes, and also in the transport of articles, we (of Niagara) might require from the interior.

MR. MARSHALL LEWIS, Architect, called in and examined.

The Committee understand that your personal knowledge of the Welland Canal, its present condition, and the probable stability of its excavation, Locks, Aqueducts, Harbours, and embankments, is extensive, and are desirous to learn your opinion on these subjects?—As far as I have a knowledge of the Canal, I think the work has been well done, and that it will be permanent. I have been employed in the building of its Locks, Waste-wears, Aqueducts and Bridges. I planned all these and also executed part of the Contracts. I believe that the Locks, Bridges, Aqueducts and other wastes, principally of wood, will last from twelve to fifteen years, and that so much of the Locks and other wood work, as are under water, will last much longer. I think the Locks have been well proved, and that there is not the least danger of their giving way. They will want repairs from time to time, but, if duly attended to, will answer well. The excavation will stand well. The Deep Cut is now considered safe. The Harbour at Port Dalhousie, as far 15 it is done, is likely to be permanent and preve satisfactory.

What value do you attach to the hydraulic advantages owned by the Company?—I cannot now ascertain their value, but it must assuredly be very great, and they can be carried to almost any extent that may be wished for.

What further probable expenditure would be necessary to complete the work, all the way to Lake Erie, in a direct line, for Schooner navigation?—I have not estimated the work; but a further expenditure will certainly be necessary in order to prevent damages to what is already performed. I was upon the line of Canal when the two vessels passed between the Lakes; and they had as little difficulty in

passing as could have been expected at that season of the year.

What advantages do you anticipate from the Canal when completed?—It will undoubtedly be of great importance to the upper country.

ROBERT HAMILTON, Esq., Queenston, called in and examined.

What advantages do you anticipate to the country and to your District from the Welland Canal, after it shall have been completed?—When the Welland Canal is completed, the District I reside in, particularly the upper part, as well as all the Western country above, will derive such advantages that it is almost impossible, at the present time, to make a proper estimate.

What is your opinion of the management of the Welland Canal from first to last? Not having any thing to do with the Welland Canal, I am unable to answer this question.

Do you as owner of Schooners and Steam Boats, expect to derive material advantage from the Welland Canal?—Whenever there is a sufficient depth of water at the Harbour to admit Steam Boats, and that Lock made wide enough, I shall expect to derive a very material advantage.

Would you approve of a further grant of the public money to be expended on this Canal, and if so, whether would you recommend the Province, to take Stock, or give a Loan?—I certainly would approve of a further grant of money rather than the Canal should remain in the unfinished state it now is. As to a Loan of the money or Stock taken, I think it will amount nearly to the same thing in the end.

Committee Room, Tuesday, January 19th, 1830.

PRESENT.

Messrs. Blacklock, Mackenzie, Woodruff, Longley, and Hopkins.

Dr. Blacklock, called to the Chair.

WM. TERRY, EEQ., a Member of the House of Assembly, for the Niagara District, called in and examined.

Are you personally acquainted with the whole line of Canal?—I am not. I am acquainted with the Canal general speaking from Port Dalhousie Harbour, to the River Welland.

What is your opision regarding the stability of the Locks; Aqueducts, excevation and other works, on the Section with which you are acquainted?—The excavation is no doubt of a permanent stature; and may be, I believe, very easily kept as sepair; the Locks will require to be frequently repeared; the Harbour, I think, will never be of general stility, the Aqueduct is said to be a work of superior mechanism, and likely to last many years.

Y4

What advantages may be expected to be derived from the Welland Canal when completed?—Mercantile men, Farmers, and those who have produce to export from the Western Country will derive great advantages from the Welland Canal. I think that it will also be advantageous to the Niagara District, and that when it shall be completed it will enhance the value of property, and produce, in the Niagara District.

Is the Canal becoming more popular in the Niag ara District?—I am not aware that it is.

Do you know any thing concerning the expenditure and management of the Canal?—I have never heard any thing against it, except as to the change of Routes, and the expenditure on the Deep Cut.

Do you think that the Canal will be profitable to the Stockholders at an early day?—If the produce of the Western States, Ohio, Michigan, Indiana, &c. shall be allowed to pass through this Canal, and from thence into the Erie Canal via Oswego, without paying customs duties. I think the Stock will yield an immediate profit, otherwise I think it will not.

Do you think the hydraulic advantages of the Canal will be great to the country and to the Company?

—It may afford water enough for fifty mills. Are you a Stockholder in the Canal ?- I am not.

Have you understood that the Contracts generally have been done at a moderate price?—I have; I believe that the Contractors generally have been losers.

MR. MERRITT again called in and examined.

On what terms did you obtain the Loan of £50,-000 from the British Government?—There is a British Act authorising the Loan, we pay four per cent interest, and the principal in ten years.

Where did you agree to pay the interest?—It is payable in London.

Have you ever paid any interest?—No there is none yet due.

Can you shew to this Committee copies of your correspondence with the British Ministry regarding this Loan?—I cannot.

Have you obtained the opinion of the Crown officers on the question, whether American Vessels, laden with United States' produce, may pass through the Welland Canal without breaking bulk or paying duties?—I produce the same (See Document marked D.)

(A.)

REPORT OF THE WELLAND CANAL COMPANY, FOR 1829.

## REPORT.

It was found, in the early part of the last season, that misrepresentations respecting the Welland Canal were so industriously circulated, and so many strange and discouraging rumors concerning it were affoat, that the Directors thought it right to publish a supplementary Report, describing minutely the condition in which the work then was, and the measures which they had determined to pursue.

To this Report, made in June last, they now refer for particulars, which it is unnecessary to recapitulate here. Those who feel such an interest in the undertaking as leads them to desire an accurate description of it, will find that Report sufficient for their purpose.

It is highly gratifying to the Directors, in presenting this Report at the conclusion of the present Season, to be able to announce that a practicable navigation has been at length accomplished from Lake Ontario to Lake Erie, by the route of the Niagara and Welland Rivers.

The public have been for some time in possession of this cheering intelligence, and it is difficult to conceive any event that could promise to add more to the prosperity of Upper Canada. It is not the intention of the Directors on this occasion to recapitulate the embarrassing difficulties which they have had to encounter during the past year, they have been of that nature, that if the object of their exertions had been one that affected only their own private interests, they could scarcely have hesitated to abandon it altogether; and it is but just to add, that so per-plexing were those difficulties that the work must have been suspended if it had not been for the confidence manifested by the Contractors. By their indefatigable exertions under great disadvantages, the Canal was filled in the middle of November last with water brought down from the Grand River through the new Feeder, and on the 30th of the same month, the anniversary of the day on which the Canal was commenced five years ago, the inhabitants of the District of Niagara were gratified by witnessing the ascent of two Schooners from Lake Ontario to the River Welland.

These Vessels proceeded to Chippawa and Fort Erie, and to the opposite Harbours of Black Rock and Buffalo, in the State of New York, where their arrival excited no little surprise, and was welcomed in the most friendly manner.

The difficulties alluded to, together with the illness of the Agent, and principal Engineer, at a period when their active superintendance was most important, unfortunately delayed the completion of the work to a season much later than had been looked forward to.

The Directors feeling the importance of opening the Canal this autumn, had intended to celebrate the event in a manner worthy of the occasion, but it had become so late in the year, that it appeared inexpedient to incur the hazard of calling a number of persons together from a distance to witness a ceremony which a single severe night might render almost impossible; they, however gave directions for obtaining one or two Schooners and passing them through

the Canal, if the season would admit of it. This has been accomplished, as we have above stated; the Schooners have both returned and the weather has continued so open, that even to this time the Canal might have been navigated.

The experiment thus made, in the presence of many respectable persons, has proved that the Locks are perfectly well constructed, and may be passed in a much shorter time than the most sanguine persons had anticipated.

Another important and remarkable feature in this Canal is, the expanded surface it presents along a great portion of its course, from its numerous reservoirs, and the peculiar make of the country through which it passes, enabling a large vessel to glide through this navigation with nearly the same facility that a Boat does in a Canal confined within its artificial channel. These facts which were evident to all who saw the passage of the Schooners Ann and Jane, and R. H. Boughton, have given a confidence in the work, which its warmest friends could scarcely have ventured to expect at so early a stage.

The channel which has thus been opened to commerce, and of which, we doubt not, the inhabitants of both sides of the upper Lakes will avail themselves, does not, by any means offer all the advantages which the completion of the entire design will produce. It places the final accomplishment of this great work, however, beyond question; because it is now carried to a point at which its benefits will be felt; all doubt is removed, and all real difficulty is surmounted. What remains is easy of execution, the expense can be estimated with comparative certainty; and no rational person can, for a moment hesitate in declaring that the work cannot, and must not stop short of the original design.

It may be thus described in a few words; vessels drawing 7½ feet water, and not having more than 21½ feet breadth of beam, coming from any port on Lake Erie with produce, will sail down the river Niagara, until they approach within about a fourth of a mile from the mouth of the River Welland or Chippawa. There they will enter a Canal which has been cut across a point of land into the River Welland, in order to avoid the difficulty and danger of descending the River Niagara so low as to the mouth of the Welland.

This cut is 15 chains in length; they will then pass up the River Welland, a distance of 9½ miles; the river is deep and still, and affords an admirable navigation for vessels of any burden. A tow path will be formed on its western bank, which is now in great forwardness. From the Welland they will ascend by two locks into the deep cut, from which point, to Lake Ontario, the distance is 16½ miles. Along this portion of the line, the canal is filled with water brought down the feeder from the Grand River, and conducted across the Welland in an aqueduct. Thirty-four locks occur in this distance: and it has been found in the first experiment made of them, that they may be passed in an average time of seven minutes. It will thus be seen that the whole distance of artificial navigation, between the two lakes, is sixten and a half miles, and that, including the passage of the Niagara and Welland Rivers, vessels will be towed 42 miles, which can be done in a day without difficulty; at least, that is the conviction resulting from the experiment made.

The directors are desirous of giving to the public all the information that can be of use in enabling them to avail themselves, promptly, of the advantages which this canal will afford: and they, therefore communicate a schedule of the rates of toll which they propose for the ensuing year, viz:

Flour, - - - - - - - 4d per bbl.
Pork, - - - - - 6d do.
Ashes, - - - - - 1s do.
Pipe Staves, - - - 20s per M.

This information will enable merchants living in Ohio and other parts of the United States to make their calculations and determine whether it will be their interest to send through this channel, such of their produce as may be destined for New York. As to produce of every kind intended to be sent to Montreal, there can be no doubt that it will pass through the Welland Canal.

Foreign vessels using the canal, and not breaking bulk, will meet with neither detention nor charge, but will pass through this artificial channel in the same manner as they have always done through the waters of the Lakes and Rivers within our boundaries. If they desire to break bulk they must of course enter regularly in the same manner as at any other port.

It may seem to some of the stockholders that the tolls are much too low, when compared with those exacted in other places in this Province and Lower Canada. The experience of a year will best determine this point; but in the mean time, the Directors beg to state, that they have been governed by this consideration; certain expenses must be incurred to the payment of wages to lock-tenders and others, which will not be increased by any additional quantity of produce or merchandize passing through; it is therefore deemed prudent to proceed upon a system as liberal as possible, in order to attract a great trade which a contrary policy might exclude.

When we consider the immense extent of territory bordering on the great lakes above us, and how rapidly their population increases, and must continue to increase, it is difficult to set bounds to the expectations which may be fairly entertained. In the state of Ohio the population is estimated at about a million, the land is exceedingly productive, the people are industrious and enterprising, and have watched the progress of the Welland Canal with no little anxiety, as opening to them the advantage of a choice of markets.

Our countrymen in the upper Districts, will see at once how valuable an object has been attained for them from the following statement.

The price of conveying a barrel of Flour from the Township of Waterloo or the Grand River and shipping the same on Lake Ontario, is at present from 3s. 12d. to 3s. 9d.

The price of conveying a barrel from thence to the mouth of Grand River, as furnished by Mr. Shade, an active merchant resident in Dumfries, will be 7½d.; from the Grand River to Ontario 7½d., which gives a saving on each barrel of from 1s. 7½d. to 2s. 6d. From any part of the Grand River below this it will bear the same proportion.

From Dover, or the interior of the Long Point country the saving will be equally great, Vessels will

convey produce from any part of Lake Erie to Prescott for less than the price heretofore charged for the two Lake Freights.

As it is a mere continuation of voyage, the grower-will consequently save the charge heretofore made-for Storage at Fort Eric, Chippawa, and Queenston, together with the boating and land carriage between those places, which hitherto caused their property to be removed six times, whereas, by this conveyance it will not require one trans-shipment.

The Company are now indebted, to Labourers, Contractors, &c.....£10,115 17 11 In addition to which, they have demands against them for lands, dam-

Agents,..... 152 19 11

21,365 9 11

Which would have left this amount on hand, had the above Shares been paid up, ..... £ 5,397 11 6

The Directors exhibit the above statement, to shew in justice to themselves, that their being in arrears at this time, is not to be ascribed to any imprudent precipitation on their part, as they had, in two instances, entered into engagements, for the supply of £21,000, on the faith of which, Contracts were entered into and which, had they been fulfilled would have left a surplus on hand greater than the temporary deficit which the Directors have been struggling to supply.

To show the Government and the Stockholders that their money has been economically expended, the following statement is presented:—

CONTINGENCIES. £260,085

£272,795

Which is not quite equal to 5 per cent on the amount. Few if any, similar undertakings have been conducted at a less charge than 10 per cent.

It has been found necessary to widen the Feeder to 20 feet bottom, and 36 feet surface, from the Deep Cut to the Grand River, in order to insure an ample supply of water for hydraulic and other purposes, as well as to connect the Grand River by a Boat Canal of suitable dimensions. To accomplish this, as well

as to place the Ship Canal, by the Niagara River, in a perfect state for navigation by the opening of the Spring, it will require the sum of £14,530. This part of the work is already under Contract; and it is the intention of the Board to make immediate application to the Legislature for an extension of Capital, and either to take Stock for the public or loan the Company £25,000, to enable them to fulfil their engagements, and complete this work on the above dimensions

The Directors feel assured the public will not derive the full advantages of this navigation, until the interior route is open throughout for ship navigation, according to the original design. To accomplish this a further sum of £25,000 will be required, to obtain which an early application will be made to the Legislature of Lower Canada, to take Stock to the amount of £12,500. They are not only equally interested in the complete success of the Canal, but have already manifested their good feeling by taking Stock to the amount of £25,000.

For what remains, an application will be made to the British Government, for which purpose, as well as to arrange other interests of the Company, J. B. Yates, Esquire, of New York, purposes to go to England, to give correct information on the present state of the work.

To Mr. Yates belongs the credit of being the largest individual Stockholder in the Welland Canal, and from his well known character, the Directors entertain every hope of his success.

The entire cost of this work when completed, viz. the ship Canal now finished between Lake Ontario and the River Welland, including 346 feet of Lockage, the Towing paths on the Niagara and Welland Rivers, the cut at the mouth of the Welland, and the Boat navigation from the Grand River to the Welland, 27 miles in extent, which will be completed the ensuing spring, will amount to £288,098.

It will be the largest Canal in America, and in point of expense, will bear the following comparison with similar undertakings.

The Eric Canal has a depth of 4 feet water, it cost after ascending the mountain at Lockport to Buffalo on Lake Eric, a distance of thirty two miles, the sum of \$2,400,000, or £600,000, exclusive of Lockage.

The Lachine Canal, with a depth of five feet water, nine miles in length, with 44 feet Lockage, cost £120.000.

The first had a length of three miles deep rock excavation, and the other is finished on a much superior scale; still, when the Deep Cut on the Welland Canal, and all other difficulties this work has had to struggle against are taken into consideration, it will bear a fair comparison with any similar undertaking.

JOHN HENRY DUNN, President. HENRY J. BOULTON, Vice President.

WILLIAM ALLAN, GEORGE KEEFER, JOHN J. LEFFERTY, ROBERT DICKSON.

Directors.

Welland Canal Office,
Saint Catharines,
Dec. 31st 1829.

[Copy.]

ATTORNEY GENERAL'S OFFICE, 30th October, 1829.

Sir—I have the honor to acknowledge the receipt of your Letter of the 28th instant, requesting my opinion whether American vessels passing through the Welland Canal can be subjected to the payment of any fees (beyond tolls,) when they do not break bulk, and also whether any and what instruction or notification may be deemed necessary to be given to Collectors, for their conduct in this case.

I am of opinion that there is no restriction upon American vessels passing and repassing through the Canal, whether laden or in ballast, in the same manner as British vessels, provided such vessels neither break bulk nor receive on board any additional cargo during the passage; and that such vessels will not be liable to pay any fees to the Collectors of any Port, unless they enter for the purpose of unloading a part or the whole of their cargo.

A copy of this opinion I conceive will be a sufficient instruction to the Collectors, with an inimation that should any foreign vessel break bulk before entry, she will be liable to seizure; and receiving on board any additional cargo during the passage will subject the master to a heavy penalty.

I have the honor to be,
Sir,
Your most ob't.,
Humble Servant.
H. J. BOULTON, Atty. General.

Hon. James Baby,
Inspector Genl. of Provincial Accounts.

Signed,

EXTRACT OF A LETTER RECEIVED BY THE SECRETARY OF THE WELLAND CANAL COMPANY FROM CLEVE-LAND, OHIO, DATED 29TH DEC. 1829.

My Dear Sir,—

I was duly favoured with your kind Letter of the 8th instant. I need not say that the information it contained afforded me as much pleasure to know that an enterprise of such importance to Canada has at last been brought to a successful issue, (may it abundantly reward all interested) as that the prospect of getting my pork to market in the spring, at a less rate per barrel by its wa-

ters, appears by no means problematical.

I shall certain induce the Forwarders here to go directly to Prescott with 3000 barrels, if possible, and we will decide the matter as soon as ever you can make me a positive offer of the rate of toll we must pay per barrel through, and Salt back, specifying the regulations and bonds to be entered into for the relanding the Pork in the U. S., because Vessels belonging to this Lake have no registers; when forwarded to Montreal it will be there finally bonded for the West Indies. Pray communicate this information as soon as possible, because I must make contracts for transportation by the 25th January; say also whether, and at what premium the Directors will assure the safe passage and return of, say the first six vessels from this port, under 90 tons burthen, and

 $\mathbf{B}_{i}$ 

drawing not exceeding 8 feet water. A little prejudice exists as to the safety of the Canal, as well as to the Harbor of Dalhousie, you had better, as the Secretary of the Company, correct any such undue prejudice by addressing Messrs. Gidding & Co., large owners here, advising them at same time rates of toll for pork, ashes, flour per barrel, wheat in bulk per cwt., lard, &c., in kegs, I shall purchase wheat next summer for the Oswego market for transport through your canal; let this toll be low and you must succeed.

(Signed) EDWARD WARHAM.

## REPORT.

The Select Committee to whom was referred the pelition of the President and Directors of the Welland Canal Company, praying for a loan of twenty-five thousand pounds, and that the capital stock of the Company may be increased to £300,000; respectfully report:

Your Committee have carefully considered the matters to them referred, and are ready to acknowledge their deep sense of the great advantages that would result to the Province and nation, were the Welland Canal completed.

But they have no certain means of knowing whether the canal could or would not be completed as far as to the Chippawa river, and its most pressing debts discharged, even with the sum mentioned in the petition, should it be granted to the Company: all former estimates having come far short of the actual cost of the undertaking.

And although it were positively ascertained that the sum of £25,000 would complete the canal and render it navigable as far as the Welland river, your committee would still hesitate, under the present circumstances of the country, either to recommend a loan, or a Provincial subscription for stock.

- 1. Because the Province is already deeply in debt, which has been chiefly contracted on account of this undertaking.
- 2. Because, under the present circumstances of the Province, it is inexpedient at this time to burthen the the people with additional debt and taxation, more especially to accomplish an undertaking from which no immediate profitable return is expected: and the repayment of a loan contracted for, which might prevent the accomplishment of other and more urgent public improvements hereafter.
- 3. Because his Majesty's government has failed to recognise the constitutional right of this House, to appropriate the whole of the revenue raised by taxes on its constituents, and to exercise that salutary control over the public expenditure of the Province, which would be most likely to leave in the treasury a surplus revenue, disposable in aid of important public undertakings.
- 4. Because the proceeds of the Canada Company's purchase are annually applied to purposes, all of which your committee cannot approve, instead of being laid out in improving the country.
- Because the proceeds arising out of the sale of clergy lands, the public lands generally, and what is

called the casual revenue, is not applied to purposes of public utility, but disposed of in a manner unknown to the country, without being accounted for to the Legislature.

- 6. Because the permanent appropriation of £2,-500 annually, is applied as a pension fund, and to other purposes not contemplated by Parliament, and which serves to lessen the means by which the Legislature could aid objects of public improvement and national utility.
- 7. Because the Welland Canal with its tolls, profits, lands, harbours, uses, and advantages, has been altogether surrendered and given up into the hands of his Majesty's Ministers or their agents, as a security for £50,000 sterling, lent by the British government, and placed without the control of this House, by virtue of a Provincial act applied for by the canal Directors.
- S. Because, His Majesty's government has withdrawn its promise to grant a sum equal in amount to one ninth of the cost, or (£27,000) in aid of the canal, promised in consequence of a privilege assured to them for the free passage of government stores, and now confines its assistance to the loan above mentioned, at interest, with the above security.
- 9. Because, it has been ascertained that there will not be funds enough in the treasury to meet the appropriation so very much desired by the people, for the improvement of the roads and bridges in this Province, after paying the instalments of Provincial Bank Stock about to be called in, and the Government Debentures which lately became due.
- 10. Because that much and long desired measure the Road Bill, tailed last year in the Legislative Council, and although renewed this year, has not yet been agreed to by that Honorable Body—a bill, the assurance of the passage of which into a law, ought, in the opinion of your committee to have precedence of any further attempts to involve the people in debt on account of the Welland Canal.

Your Committee have directed their chairman to repert a bill, authorising an increase in the Company's Capital Stock to the amount prayed for in their petition.

All which is respectfully submitted,

THOMAS HORNER.

Chairman.

Commons House of Assembly, 26th January, 1836.

# SECOND REPORT.

Additional evidence taken by the Committee on the Welland Canal.

Your Committee appointed to enquire into the management of the Welland and Burlington Canals, respectfully report certain additional evidence, taken by them, in the matter of the Welland Canal, together with the explanation given by Mr. Black, regarding the apparent difference of £3,593 between the expenditure, as stated in the Annual Report of

the Directors, and as laid down, in the detailed accounts submitted to your Committee.

# AMBROSE BLACKLOCK,

Chairman.

Committee Room, Commons' House of Assembly, February 16th, 1830.

> Committee Room, Thursday, February 4th.

PRESENT.

Messrs. Blacklock, Hopkins, Woodruff, Longley, & Muckenzie.

Dr. Blacklock was called to the chair.

DAVID THOMPSON, Esq., J. P., Weinfleet, called in and examined.

How near the line of Canal do you reside? Within three quarters of a mile; it runs through my land.

Do you think it practicable to finish the canal to Chippawa, and widen the feeder so as to render the work navigable, during the season for £25,000? I think that £2000 would finish the canal to the Chippawa, all except the feeder, and that £25,000 would widen the feeder for boat navigation, and complete the Canal to the Welland, the old debts not included.

Do you believe the Board of Directors gave that patient, careful and personal attention to the Deep Cut, previous to its caving in, which was calculated in all "human probability" to prevent the miscarriage which took place? The Directors attended once a month and viewed the works—their engineers were present almost tevery day, to give necessary directions to the contractors. Mr. Clark was their Agent.

Was it generally apprehended that the Deep Cut would slide in before it did give way? From the time of the first slip, I was of opinion that if the excavation was persisted in below the surface of the Welland, it would give way—I advised Mr. Merritt and the engineers that there was no probability of its continuing to stand, because the clay below that surface absorbed water quickly, and was therefore unable to support the weight of the Banks. There was a variety of opinions on the subject.

Whether would you advise parting with the Provincial Stock in the Canal to the company, without recompense, in order to enable them the better to finish the work—or would you recommend a loan? I would recommend a loan.

Is it your opinion, if further slips take place in the canal banks at the Deep Cut—that the work will sustain material injury? I think that any slips that can now take place will be of very little consequence.

In what situation are the Locks? With the exception of two, which have bilged in, they are in good order and will be likely to stand.

Do you think it absolutely necessary to widen the feeder, in order to give a permanent supply of water to the Canal? I do.

Are you a Stockholder in the Welland Canal? I am not.

Are you a Creditor of the Company? I am—to the amount of £1,400 or thereabouts.

Do the Company acknowledge your claim? It has not been before the Board.

Are there many such claims not yet decided on? There are many such claims.

Would the Welland Canal be of any use unless the feeder were widened? Scarcely any.

Do you consider that the Directors gave that constant attendance which was necessary for the welfare of the work? I think it would have been an advantage had they been oftener present. They attended, however, by their engineers and agent.

Committee Room, Saturday, 6th February, 1830.

#### PRESENT :

Doctor, Blacklock, Messrs. Mackenzie, Hopkins, Woodruff, & Longley.

DOCTOR BLACKLOCK, was called to the chair.

W. H. MERRITT, Esq. called in and examined.

Can you shew this committee a copy of the Bond and Mortgage of the President of the Welland Canal Company, given to the British government as a security for £50,000 by the Directors? The Bond and Mortgage are in the Government office here, and I now produce Mr. Mudge's certificate shewing the conditions of the sale, which are as follows:

# GOVERNMENT OFFICE, York, 5th February, 1830.

The bond and mortgage of the Honourable John Henry Dunn, President of the Wolland Canal Company, is lodged in this office—conditioned for the payment of fifty thousand pounds of sterling money of Great Britain, on or before the twenty-fifth day of July, 1838, at the Treasury Chambers in Whitehall, with interest after the rate of 4 pounds for every one hundred pounds, payable annually.

To secure which a mortgage was given on the Canal, its tolls and profits, in case the said £50,000 and interest is not paid by the time specified.

The mortgage likewise contains a clause to allow His Majesty's Government to assume the property of the canal in case the above mentioned condition is not complied with, saving however any prior incumbrance, on account of monies advanced for the canal.

It does not include fifteen thousand acres of land of the company in Wainfleet and Humberstone.

By command of His Excellency,
The Lieutenant Governor,
Z. MUDGE,

Secretary.

Have you seen this Bond and Mortgage. I saw it yesterday.

Does it contain any provision authorising the British or Provincial Government to take possession of the Canal at an earlier period than July, 1838? It does provided the interest on the loan is not punctually paid:

Does it include the Hydraulic privileges of the company? It includes every thing on the line of the canal except the lands.

As you have not an official copy of the British act authorising the loan, the committee are desirous of obtaining the substance of its provisions, as nearly as you can remember them? The following is the substance of its provisions, and I believe it to be correct.

Whereas it is expedient to authorise a loan of money to assist in completing the Welland Canal in Upper Canada. It shall and may be lawful for the Lords Commissioners of His Majesty's Treasury to advance the sum of fifty thousand pounds out of the consolidated funds, at such a rate of interest, and on such terms as any three of them may appoint.

# (Explanatory note submitted to the Committee by Mr. Black, Secretary W. C. C.)

The difference between the Printed Report and the balance sheet arises from £3,000, received of the Bank of Upper Canada, which has been paid to Contractors in advance, but not having been estimated could not be carried to account so as to appear in the balance sheet.

JOHN BLACK, Secretary W. C. C.

#### No. 2.

#### ACT OF PARLIAMENT 11th GEO, 4th, c. 11.

An Act to grant a further loan to the Welland Canal Company and to regulate their further operations.

[Passed, March 6th, 1830.]

Most Gracious Sovereign,

Whereas the Welland Canal has been so far completed as to allow the passage of vessels from Port Dalhousie on Lake Onturio, to Chipnawa, on the Niagara River, above the fulls of that River; and whereas an Act was passed in the eighth year of your Majesty's reign, entitled, "An Act to enable the President and Directors of the Welland Canal Company to accept an aid from His Majesty's Government, towards the completion of the said Canal, and to secure to His Majesty the free use thereof," whereby in consideration of the one-ninth of the estimated cost of the said Canal, to be paid by Your Majesty to the said Canal Company, the free use of the said Canal was secured to your Majesty and the Locks of the said Canal were enlarged to certain dimensions, stipulated in behalf of your Majesty by your Majesty's Secretary of State for the Colonies, and whereas the said Act is still in full force and effect, but the said aid not having been yet advanced by your Majesty, (though your Majesty's faithful Commons have every confidence that the said aid will be extended by your Majesty,) and the said Company from the want of the said and and other causes, are unable to complete the said Canal so as to render the same at all times fit for navigation from Port Dalhousie, on Lake Ontario, to the mouth of the

River Welland; and it is therefore necessary to grant the said Company immediate aid to insure the progress of the said Canal between the said places; We therefore pray your Majesty that it may be enacted, And be it enacted by the King's Most Excellent Majesty, by and with the advice and consent of the Legislative Council and Assembly of the Province of Upper Canada, constituted and assembled by virtue of and under the authority of an Act passed in the Parliament of Great Britain, entitled, "An Act to repeal certain parts of an Act passed in the fourtrenth year of His Majesty's Reign, entitled "An Act for making more effectual provision for the Government of the Province of Quebec, in North America, and to make further provision for the Government of the said Province," and by the authority of the same, That it shall and may be lawful for the Governor, Lieutenant Governor, or person administering the Government of this Province, to authorise and direct His Majesty's Receiver General of this Province, to raise by loan from any person or persons, bodies politic or corporate who may be willing to advance the same upon the credit of the Government Bills or Debentures authorised to be issued under this Act, a sum not exceeding twenty five thousand pounds, at a rate of interest not exceeding six per centum; and that as soon as the said sum of twenty-five thousand pounds or any part thereof, shall be so raised it shall and may be lawful for the Governor, Lieutenant Governor, or person administering the Government of this Province to issue his warrant upon the said Receiver General for the same in favor of the said Welland Canal Company, upon the terms and conditions hereinafter provided, respecting the same, which sum of money, when payable as aforesaid, in favor of the said Company shall be paid into the hands of the President of the said Company, to be held and applied by him to and for the uses of the said Company, in the completion of the said Canal, under the terms and conditions of this act.

II. And be it further enacted by the authority eforesaid. That the expenditure of the said sum of twenty-five thousand pounds shall be limited to the payment of the debts due by the said Welland Canal Company and to the completion of the said Canal between Lake Ontario and the mouth of the said Canal near Chippawa, on the River Niagara, and that no further expenditure shall be made until the condition of the Deep Cut, on the said canal shall be examined and reported to His Excellency the Lieutenant Governor by the person appointed by this Act for that purpose: Provided always, that it shall be lawful for the said Company to enlarge the feeder of the said Canal, now in progress, to such a width as will afford a sufficient supply of water for navigating the said Canal from the River Welland to Lake Ontario and no wider.

III. And be it further enacted by the authority aforesaid, That the sum of money hereby authorised to be raised by Loan shall not be subject to any deduction of poundage for the Receiver General of this Province, any law or usage to the contrary notwithstanding.

IV. And he it further enacted by the Authority aforesaid, That it shall and may be lawful for the Receiver General for the time being to cause or direct any number of Debentures to be made out for

such sum or sums of money, not exceeding in the whole the said sum of twenty five thousand pounds, as any person or persons, bodies politic or corporate, shall agree to advance on the credit of the said Debentures, which Debentures shall be prepared and made out in such method and form as His Majesty's Receiver General shall think most safe and convenient, and shall be signed by him; and that for each Loan or advance three several Debentures shall sue at the same time, bearing date on the day on which the same shall actually be issued, and being each for the payment of one third of the sum so advanced, at the expiration of periods not shorter than seven, nine, and eleven years, respectively, with interest according to the rate at which such Loan shall be negotiated, from the date of such debentures, until the same shall be discharged.

V. And be it, &x., That all such debentures, with the interest theron, and all charges incident to, or attending the same, shall be, and are hereby charged and chargeable upon and shall be repaid and horne out of the monies that shall come into the hands of the Receiver General, to and for the public uses of this Province, and at the disposal of the Legislature thereof.

VI. And be it further enacted by the authority aforesaid, That the Loan authorized by this Act shall be contracted for upon the express condition, that at any time either before or after the said debentures or any of them which are by this Act directed to be issued, shall become due, according to the terms thereof, it shall and may be lawful for the Governor, Lt.Governor or person administering the Government of this Province, if he shall think proper so to do, to direct a notice to be inserted in the U. C. Gazette, requiring all holders of the said debentures to present the same for payment; and if after insertion of the said notice for three months, any debenture shall remain out more than six months from the first publication of such notice, all interest on such debentures after the expiration of the said six months shall cease, and be no further payable, in respect to the time which may elapse between the expiration of the said six months and their presentment for payment.

VII. And be it further enacted, by the Authority aforesaid, That all and every the provisions contained in a certain Act of the Parliament of this Province, passed in the seventh year of His Majesty's reign, entitled "An Act to authorise the Government to borrow a certain sum of money, upon debenture, to be Loaned to the Welland Canal Company," respecting the debentures authorized by the said Act passing current with certain public accountants; the payment of interest upon the same, by such accountants, and the suspension of interest in certain cases; the submitting to the Legislature accounts of such debentures, and the interest paid thereon, and the expenses attending the same; the payment of interest to holders of such debentures; the remuneration to the Receiver General, for the services required by the said Act; paying off and cancelling the said de-bentures; and also, the provision made in the seventh Section of the said Act for punishing the forging of any debenture thereby authorised to be issued, or of any matter or thing relating thereto, or the knowing-ly uttering any such forged debenture, or other matter, as aforesaid shall apply to, and be in force in respect to, the debentures which shall be issued according to this Act.

VIII. And he it further enacted, by the Authority aforesaid, That the said Receiver General of this Province for the time being, shall not pay or advance to the Welland Canal Company any sum or sums of money specified in or by virtue of any warrant or warrants which may be from time to time isssued in their favour by the Governor, Lt. Governor or person administering the Government of this Province under the authority of this Act, until the said Welland Canal Company shall have delivered to the said Receiver General a bond or bonds, or writing or writings, obligatory to our Sovereign Lord the Ring his Heirs and successors, duly sealed and executed under the seal of the said Welland Canal Company, in the penal sum of double the amount to be secured thereby, such bond or bonds, writing or writings, obligatory, respectively, to be conditioned for the payment to the said Receiver General, to and for the use of our said Lord the King, his heirs and successors, the sum or sums of money specified in said warrant or warrants, that may be from time to time issued in favor of the said Welland Canal Company, by virtue and under the authority of this Act, and at such period or periods respectively, as the debenture or debentures upon which such sum or sums of money, so to be from time to time advanced to the said Company by way of Loan may have been raised shall respectively have become due and payable according to the terms thereof, together with the legal interest thereon, at the rate of six per cent per annum, such interest to be paid to the Receiver General, to and for the use of our Sovereign Lord the King, his Heirs and successors, half-yearly, computed from the date or dates of the said bond or bonds, writing orwritings, obligatory, respectively; and which bond or honds, writing or writings, obligatory respectively, shall be prepared and made out in such method: and form as the said Receiver General shall think most safe and proper.

IX. And be it further enacted by the Authority aforesaid, That upon payment by the said Company to the Receiver General of this Province, for the time being, of the principal or interest on any sum or sums of money, from time to time lent and advanced to the Welland Canal Company, by virtue of any such warrant or warrants issued under the authority of this Act, according to the condition, true intent, and meaning of any bond or bonds to be given by the said Company for issuing the same as by this Act required, such Receiver General shall deliver to the said Company a receipt or receipts for the same, under his hand, which receipt or receipts so signed and delivered, shall be, and are hereby declared to be, a full and sufficient acquittance or acquittances to the said Company for the sum or sums therein respectively mentioned and specified.

X. And be it further enacted, by the Authority aforesaid, That all and every sum and sums of money from time to time paid into the hands of the Receiver General of this Province by the said Welland Canal Company, as a principal or interest upon any bond or bonds of the said Company, given by virtue of this Act, shall remain in the hands of such Receiver General of this Province, at the disposal of the Legislature thereof, and that all sums of money paid under the authority of this Act, shall be accounted for to His Majesty through the Lords Commissioners of His Treasury, for the time being, in such

 $C_{5}$ 

manner and form as His Majesty, His Heirs and successors shall be graciously pleased to direct.

XI. [Repealed by 1st Wil., IV. c. 18.]

XII. Provided always nevertheless, and be it further enacted, by the Authority aforesaid. That nothing herein contained shall be construed to restrain or prevent the said Company after the completion of the said Canal from Port Dulhouse to the entrance of the said Canal into the Niagara River, to apply such sum of money as may be necessary in the formation and construction of a Towing Path along the Niagara River, from Lake Erie to the entrance of the said Canal.

YII. And be it further enacted by the Authority aforesaid, That Robert Randal, of the District of Niagara, Esq. shall be, and he is hereby appointed Commissioner, under and by virtue of this Act, to examine the said Ca al, and particularly the section thereof called the Deep Cut, and to report to His Excellency the Lt. Governor, or person administering the Government for the time being, for the information of the Legislature, the condition of the said Canal and Deep Cut thereof, and particularly to examine and report upon the strata of which the said Deep Cut is composed; the effect which the sensons have already had thereon, and the probability there is of the stability or instability of the banks of the said Deep Cut, with the facts and reasons upon which such opinion of their stability or instability is founded, and to examine and report particularly upon the wooden Locks of the said Canal, their sufficiency, probable durability, and expense of repair; and to examine and report upon the Harbour at the twelve mile Creek, and the condition, practicability, and sufficiency thereof; and to examine and report upon the condition of the Dam crected across the Grand River, and the effects from overflowing, or otherwise, produced by the same; and to examine and report the condition of the Feeder from the Grand River to the said Canal, and whether it would not be practicable and advantageous to have a Feeder from another and higher point of the said Grand River, together with all such other and further facts and information as the said Commissioner may deem useful, in aid of forming a correct opinion of the said work, its progress, condition and future usefulness.

XIV. And be it further enacted, by the Authority aforesaid. That it shall and may be lawful for the Governor, Lt. Governor, or person administering the Government for the time being, to remunerate the said Robert Randal for his duties and services aforesaid, and for any disbursements he may have to make in the discharge of such duties and services, to such an amount as His Excellency the Lt. Governor or person administering the Government for the time being, shall think fit; and to issue his warrant, or warrants for such amount upon the Receiver General of this Province, in favor of the said Robert Randal, which amount shall be paid out of any monies in the hands of the said Receiver General unappropriated, and subject to the disposal of the Legislature.

No. 3.

MINUTES OF THE BOARD, FOR 1830.

January 11th, 1830.

At a Meeting of the Directors, held at York,

PRESENT:

The Hon. John H. Dunn, President. The Hon. William Allan,

J. J. Lefferty, and

George Keefer, Esquires.

The Minutes of 31st December were read and confirmed.

Resolved, That a Petition be presented to the Legislature to increase the Stock of the Company to £300,000, and to take Stock or grant a Loan to the amount of £25,000.

Resolved, That a Petition be presented to the Legislature to advance £15,775 to enable the Directors to discharge the debts and claims upon the Company, and a further sum of £9225 to carry on the work and to increase the Capital to £300,000.

Resolved, That J. A. Wilkinson be allowed for his assistance in the Engineering Department the sum of \$40 per month, amounting to £35.

Resolved, That a Petition be presented to Sir George Murray, Secretary of State for the Colonies, for the 1 formerly granted to the Company.

Resolved, That the Mill Seats at Carl's, South end of Deep Cut, he let by Auction on Thursday the 3rd of June, and the Village Lots be sold at the same time—all buildings creeted on the Mill Seats which may revert to the Company. to be built with good Stone foundations, 2 feet above the carth.

Resolved, That the Mill Seat at Hall Davis' be granted to him at the rent of \$50 for each run of Stones, and \$50 for a Saw Mill.

John Putnam having applied for a privilege to erect buildings on the banks of the Niagara River, the Company do not conceive they have any right thereto, and therefore cannot comply with his request.

Resolved, That the day of election be altered from the first Wednesday in April to the first day in June.

Resolved, That the Petition of Robert Campbell be complied with, viz., That he be paid to the extent of his cost upon his work at the mouth of the Chippawa, amounting to the sum of £2547, instead of £2272 18 6., as estimated by the Engineer.

Resolved, That Mr. Phelps' Petition be complied with subject to the further consideration of the Board, deducting £75 advanced on land. (see February 1.)

1st February, 1830.

At a Meeting of the Board of Directors, held at York,

PRESENT:

The Honorable John H. Dunn, Fresident, Henry J. Boulton, Esquire, Vice-President. The Hon. William Allan, and J. J. Lefferty, Esquire.

Resolved, That the Engineer be empowered to lay out a Race-way at St. Catharines, in the most suitable situation. The Mill Seats to be sold by Public Auction, on Saturday 5th June—the digging to be let out on the 15th April, but not to be paid out of the present funds. The other Mill Seats to be let, through the line, in the same proportion.

March 8th, 1830.

At a Meeting of the Board of Directors, held at

#### PRESENT :

The Hon. John H. Dunn, President. H. J. Boulton Esq, Vice President. The Hon. William Allan, and Robert Randall, Esq.

The undermentioned Petitions and Applications were taken into consideration—viz:

1st. R. Armington's proposal for a Dry Dock.

In case the £25,000 is obtained the Agent is authorized to put the Dry Dock under Contract on such terms as he or the Superintendant may think most advantageous, after giving public notice of the same, and not otherwise—this may stand over.

2nd. Upper and others, for a Bridge on the Holland Road. In the opinion of the Engineer it is not necessary.

Resolved, That Mr. Upper be allowed to build a Bridge, provided he will erect one equal to those atready built, for a sum not exceeding \$300—the site to be first examined.

3rd. The Petition of John Carl and others, to be attended to, and a Bridge built with the least possible delay, after the site is examined.

4th. Misener's claim for compensation to be decided by a general arbitration, which will be appointed as soon as all the other claims against the Company can be ascertained.

5th. The tolls heretofore decided on to be expunged.

6th. M. Lewis' Report of Harbor, Lake Eriedeferred to another meeting of the Board.

7th. W. L. Mackenzie's bill for printing report, £6 5s., ordered to be paid.

8th. Jesse Wilson's application for mill privilege, postponed till after the sale at Carl's, 3rd June.

9th. D. Thomson's claim for loss on Thompson's estate, &c., cannot be entertained, considering that contract was subsequently renewed by Messrs. Monson, Simpson, and Pratt.

10th. The other several claims, &c., were deferred—in the mean time, Messrs. G. Keefer, J. J. Lefferty, and R. Randal, Esquires, are requested to examine the same as well as others which may be submitted to the agent or Secretary at such convenient time as may be appointed before Mr. Barrett leaves, and to report their opinion thereon to the Board—this deferred.

11th. Resolved, That Mr. M. Lewis be employed to superintend the work from Port Dalhousie to the mountain at £225 per annum, and Mr. O. Phelps from thence to the Grand River at £250 per annum, as proposed by him on settlement of his account.

12th. That Mr. George Keefer be continued as principal Engineer, at his present salary,—and that Mr. Barrett, the principal Engineer be informed that the Board entertain a high opinion of the zeal and talent with which he has conducted the various operations of the canal, and regret that they are not

in a situation to continue the remainder of the work so as to retain him in their service until the whole is completed.—Mr. Barrett's salary to be paid as soon as the accounts are settled and the committee have investigated the claims alluded to above.1

13th. Ordered, That the agent, in conjuction with the Superintendents, take immediate measures to put the line of Canal from lake to lake in a situation to admit the passage of vessels at the earliest period according to the provision of the late Act.

14th. Resolved, That the agent adopt such arrangements on opening the Canal as circumstances may require, making a full report of the same at the first meeting of the Board, that they may be altered or confirmed, as may be deemed expedient.

J. A. Wilkinson's salary—£35, and the agent and Secretary-£150-ordered to be paid.

Ordered, That the Agent or Secretary collect and lay before the Committee appointed to report thereon, all claims for damages on the Grand River, that they may report at the next meeting of the Board.

Ordered, That the Engineer survey the land required from Mr. Adams from the original boundaries, and that the same be taken by the Companythe lease of the mills, as examined by the Attorney General, to be executed and delivered to Mr. Adams.

Application to the Legislature of Lower. Canada having been forwarded some time ago and no answer received, it is deemed expedient to renew it-and as William Berczy, Esq., M. P. P., is going to Montreal, the Board think it expedient to solicit Mr. B., to proceed to Quebec and press their application to the consideration of the House of Assembly-for which service they will remunerate him for this expense from Montreal to Quebec, and back. The Agent is requested to provide him with all necessary papers to forward the object of his mission.

The agent is authorised to announce the opening of the Canal, and to guarantee all property through the Canal on behalf of the Company.

Application having been made to erect a Woollen manufactory—

Resolved, The privilege be granted for \$50.

Mr. McMicking having proposed to build a steam boat, the President recommends the Company taking a quarter share.

June 2nd, 1830.

At a meeting of the Stockholders held at St. Catharines, pursuant to advertisement for the election of Directors for the year ensuing,

ach eo bahreta

George Keefer, and Alexander Y. McDonell, Esquires.

Mr. Keefer, produced a power of Attorney appointing him proxy for the Stockholders in New York.

The ballot having been taken the following gen-

tlemen were declared to be duly elected, viz:

The Hon. John H. Dunn,
The Hon. William Allan,
Henry J. Boulton,
Alexander Y. McDonell, and
William Hamilton Merritt, Esquires.

July 30th, 1830.

At a meeting of the Directors, held at St. Catharines,

#### PRESENT :

The Hon. John H. Dunn,
The Hon. William Allan,
Robert Randal, Alex. Y. McDonell, and
W. H. Merritt, Esquires.

The Minutes of the 2nd June were read, respecting the Election of Directors for the ensuing year, when the Hon. John H. Dunn was re-elected President, and Alexr. Y. McDonell Esq. Vice President.

The Minutes from January 11 1830, were read and confirmed.

Resolved, That Mr. Berczy be written to to account for his claim of £22 10.

In conformity with the 14th resolution of 8th March, the Agent submitted the following items for the consideration of the Board, viz.

That the following gentlemen be Collectors of Toll.

Robert Randall, Esq......Chippawa. Orson Phelps,.......Grand River. Thomas Merritt, senior,...Dalhousie.

which appointments were confirmed and the Secretary ordered to write to the parties to give the security required by 34th clause of the Statute 1824—viz.—"two or more sureties in such a sum as may be satisfactory to the Directors, with condition for the faithful discharge of his duty"—and to furnish them with their instructions.

Regulations relative to the navigation and management of the Canal were ordered to be printed and acted upon immediately.

The award of James Cummings, Esq.

It appears the amount awarded is £91 5—Mr. Keefer's statement of the land is A. 1, 3, 32, or 2 rood 16 perches, exclusive of the road—whereas Mr. C. make it 5 or 6 acres—the difference is supposed to be the land taken for Towing path—under this impression the Agent has not laid out the Towing path or entered on Mr. C's. premises—waiting the opinion of the Board, who will determine if this award will establish a precedent for other claimants or not.

Mr. C. was applied to, and it was intended to continue the Towing Path on his premises if he would consent to leave out the sum the Arbitrators awarded for it—otherwise it can be removed to the opposite side of the Cut, although that would be attended with much inconvenience.

Resolved, That the above be examined by the Committee, who will report thereon.

Would it not be advisable to propose to each claimant to leave the decision of his claim to the three Arbitrators named by the last Legislature, and in case they will not consent, to wait the next sitting of Parliament, and get a new Act nominating the Arbitrators;—experience shows the Company is always compelled to pay the expenses on each award, which generally brings the amount as high as if it were decided at once.

Claimants on the Grand River—should not the damages of crops and removal of buildings be settled with the individuals?—with whom are we to settle for the lands?—the people have all been waiting with much patience, and require an immediate decision.

Resolved, To refer this subject to the Committee, and that Mr. Keefer accompany them on the Survey.

The following applications and petitions were submitted.

Nicholas Smith for Land-rejected, as his offer was too low.

Philip Carl to purchase his Farm, 200 acres adjoining Robinson, for £500—his award is £158, leaving a balance of £342—declined.

Nathan Pawling, on the part of Wm. Budden to be permitted to creet a Store House at Port Dalhousie—granted Mr. Budden to have a Lease for 999 years, at a nominal rent, say 5 shillings per annum, the line to be marked out by the Company's Engineer, so as not to interfere with the navigation of the Canal.

On the same principle other applicants may occupy sites for Storehouses.

Jesse Wilson, for Mill Seat at Aqueduct-rejected.

Mr. Cusack, for \$25 subscribed towards Grand River Survey—ordered to be paid.

Other claims referred to the Committee.

Resolved. That Alexr. Y. McDonell, R. Randall, and J. J. Lefferty, Esquires, and Afred Barret, Engineer, be a Committee to examine and report on all just and lawful claims, and as soon as they are prepared to apprise the President thereof, who will appoint a day for the meeting of the Board to decide thereon.

Resolved. That Thaddeus Davis be engaged to superintend the completion of the Dam at Grand River, provided the Committee who will examine the Dam are satisfied with what he has already done.

Resolved, That Judge Wilkinson be informed that the Board intend to commence a prosecution against him (for his roguery) as soon as the expense of repairing the Dam is ascertained.

Mr. Wm. Mylne having applied for compensation for damages sustained by the Canal passing through his land, and also to be appointed Collector at Grand River.

Resolved, That his claim cannot be entertained, and that the Collector is already appointed.

Referring to the minutes of last Board, it appears no purchasers of capital have offered for the mill seats or hydraulic privileges on lease for 10 years, except Guy Atkins for the surplus water at the River Welland at \$150 per annum; a reservation being made at the time of sale that if the Company

decided on an absolute sale of the privileges the sale of leases were to be null and void.

An offer was made by Frederick Tucker of Lockport, of £500 for the choice of a mill seat for 4 run of stones at St. Catharines, or for a lease of 999 years at a rental of £30 per annum.

Resolved, That Mr. Tucker be informed that the Company will not sell any of the mill seats at St. Catharines at present.

To afford facility to those who may be inclined to purchase town lots with a view of building thereon-

Resolved, That the village or town lots be divided into 3 classes-viz:

#### ROBINSON.

1et olana		.£25	0	0
and class,		. 12	10	0
3rd class.		. 6	5	0
	ALLANBURGH.			* -
let close	, , , , , , , , , , , , , , , , , , ,	.£18	15	0
2nd class.		. 10	0	0
3rd class.		. 5	0	0
	MARSHVILLE.			
	and the second second			_

Persons purchasing lots are to erect a frame building on each lot within one year from the day of purchase.

Resolved, That Samuel Keefer draw a plan of the above, copies of which are to be sent to Mr. Buchanan, Quebec, and Mr. Day, Albany, with description

A back or soak ditch appearing necessary for the preservation of the banks of the canal as well as draining the land it is now being made-approved.

The towing path from the aqueduct to the Grand River being likely to become a great public benefit by permitting horses and carriages to travel thereon, which must necessarily damage the canal, especially in the wet season, it is

Resolved, That the following tolls be collected for the purpose of keeping the same in repair, viz:

	, <b>D</b> .	u.
For every carriage, wagon, or sleigh, with 2		٠.,
horang	1	3
Do do do with 1 horse,	1	0

that distance will be-For every carriage, wagon, or sleigh, with 2

. . . . . . 0 horses, .......... do. with 1 horse, 0 Do. Do. Ďọ. Do. Do.

Resolved, That a Superintendant be placed at the aqueduct, whose duty it shall he to take charge of the canal from Carl's bason to the curve above Hel-

lems'—he shall keep the banks and roads in repair, erect a toll gate and collect the toll—keep the canal free from timber, rubbish, &c.

Another at Marshville, who shall perform the like duty, from the curve to 41 miles beyond Marshville.

Another at Grand River, beyond Broad Creek, to extend to the waste weir at Cranberry Marsh.

Application to be made to Mr. Boulton, for 4 acres of land to erect a house, &c., in the last mentioned

Another Superintendant at Grand River Dam to extend from the dam to Cranberry Creek, including the same to the right bank of the Grand River.

As a primary consideration is to secure a permanent supply of water for the navigation of the Canal,

Resolved, That instruction be given to the Superintendant at Graud River Dam and elsewhere,

1st. That the waste weir at Cranberry Amended and Sapt Creek be alway kept at Feeder height—and whenever the water ceases to run over the waste weir, the saw mills on the Feeder above this point shall be stopped at the grist mill when one inch below it.

2nd. That the waste weir at Marshville Amended 2nd. That the waste welline, and whenever the water ceases to run over the waste weir the saw mills at Marshville to cease, and when one inch below it, all other machinery to cease.

3rd. That the waste weir at Robinson be raised to top water line, and whenever the water ceases to run over this waste weir, the saw mill to stop, and when one inch below it, other machinery.

4th. The same principle to guide the Su-Amended 4th. The same principle to guite the other waste weirs and mills from this point to Lake Ontario.

October 12th, 1830.

At a Meeting of the Directors, held this day at York,

#### PRESENT:

Alex. Y. McDonell, Esq., Vice-President. The Hon William Allan, and H. J. Boulton, Esquires

Resolved, That the Vice President draw upon the Bank of Upper Canada on account of the Company for the sum of Two Thousand Pounds.

October 26th, 1880.

At a Meeting of the Board of Directors, held this day at St. Catharines,

#### PRESENT.

Alex, Y. McDonell, Esq., Vice President, Henry J. Boulton,
Robert Randall, and
Wm. Hamilton Merritt, Esqrs.

Yates of New York having returned from England, attended the Board and laid before the

Directors a Report of his proceedings while in London, which was read and taken into consideration.

1st. From which it appears that His Majesty's Government have not confirmed the offer made by the Despatch of Lord Bathurst in 2826, to pay one ninth of the cost of the Canal, and that individuals do not feel disposed to lend money or embark their Capital in the Canal to the extent required, so long as the incumbrance which Government have on it exists—and it being the opinion of Mr. Yates, as well as the Members of this Board that if the money is repaid to the Government they may still feel it their duty to repay the ½ on the original agreement, and sensible that the revenue of the Canal should be considerably increased by the outlay of Capital sufficient to erect Storehouses and snitable craft for the navigation thereof, as well as for other purposes connected with the undertaking.

#### Resolved-

1st. That John B. Yates Esq. be empowered to negotiate a Loan of money to the amount which he may deem necessary to pay off those incumbrances, and for the purposes of the Canal, with any individuals, bodies corporate or politic, in any way or manner he may conceive best adapted for the interests of the Company—the principal of which may be payable between 1830 and 1850, and the interest not to exceed 5 per cent per annum.

2nd. It is the opinion of this Board that if an immediate sale of the Lands of the Company, together with the hydraulic privileges, could be effected, it would promote the interest of the Company by the increased toll which must be brought on the Canal for the supply of the various machinery which will be erected, besides the indirect trade which must arise from the business thus created—the Board feel every disposition to promote the object—but as the amount of Capital necessary to invest in machinery, &c. must exceed £25,000, to obtain an income of £15,000 per annum, a sum beyond what the Company may command.

Resolved, That J. B. Yates be empowered to effect a sale of all the lands and hydraulic privileges now on or to be on the entire line of the Canal, including the route hereafter to be made to Lake Erie, reserving the entire management and regulation of the waters to the said Company, to preserve the levels throughout and make from time to time such alterations as they may deem necessary for preserving or improving the navigation of or on the Canal for the sum of £25,000, payable in 10 years, with interest payable yearly from the first day of January next

And that the said John B. Yates may have the refusal thereof for one year—the title to be given on payment of the principal or any part thereof—and that a Contract be entered into with him to that effect provided the Directors unanimously approve of the measure.

3rd. As an early application to the Legislature the ensuing season appears necessary,

Resolved, That the Petition be made out embracing the following subjects:

1st. A satisfactory explanation of the 4th clause of the 6th Gro. 4, passed 13th April 1825, to remove any objection to our obtaining toll on the Canal from

the Niagara River to the River Welland—and authorising us to build a Dam at the mouth of the said River at Chippawa, which is to be considered a part of the Canal.

2nd. To report the 15th and 16th clauses which give the Government a right to assume the Canal, inasmuch as they have retained the right to regulate the toll.

3rd. To repeal the clause in the last Act preventing our making the Canal to Lake Erie without a further Legislative enactment.

4th. To pass an Act permitting the landing and relanding from any part of the United States, on or above Lake Erie to any American Port on or below Lake Ontario, without any duty or additional charge on the produce or vessel bringing or taking away the same.

5th. To connect the Lakes by the shortest possible route it is necessary to make a Lateral Cut to the most direct and bost point on Lake Erie, which will cost \$100,000—to pay off all demands against the Company, and to enable them to carry on the operation of the Canal, it is necessary to procure the further sum of \$100,000.

Resolved, That a Petition be presented to the Legislatures of Upper and Lower Canada for Loans to the amount above mentioned, and that Mr. Berczy be apprised that the Company expect him to make the application as soon as the Legislature of Lower Canada may assemble.

6th. To consider the Grand River from the Dam to the mouth, including the opposite banks, as forming a part of the Canal.

The Committee and Mr. G. Keefer are requested to examine the claims of individuals on the Indian lands, to collect information and report thereon to the Board.

Resolved, from the present feeling of the Forwarders on the Ningara frontier, (as well as from the general want of enterprise) no Boats or crections being prepared, it is necessary the Company should make preparation for the ensuing season.

To accomplish this the Agent is authorised to carry into effect the following arrangements.

1st. The following notice to be published-

"Scaled proposals will be received at the Canal Office on or before the 1st December next for building a Store House at the Grand River Dam, Dunnville, of the following dimensions.—One at the Deep Cut on the River Welland, and one at Port Dalhousie.—The above to be framed buildings—plans and specifications will be furnished at the Welland Canal Office."

Note.—The Store Houses at Dunnville will reach from the River below the Dun to the Canal, so that Vessels may unload at one door, and Canal Boats load at the other—all plain Buildings—to cost about 5 or \$600.—The one at Robinson will be on the Welland, for those Vessels which cannot pass the Canal.—The one at Dalhousic on the West Pier, for Steam Boats.—Likewise a Drudging Machine similar to the one in operation, with any improvement in its construction for the open Lake, which will be

submitted with the proposal. This Machine and Boats will cost about \$500.

Also 4 Canal Boats, 95 feet by 14, drawing 3 feet 6 inches when loaded—a model or plan to accompany the proposal—to be completed by 1st March.

Resolved, That the Agent be instructed to put the whole line of the Canal in perfect repair this Fall, and leave nothing to be done the ensuing Spring.

Note.—The banks at Hall Davis' Reservoir, and Marlett's Culvert require raising and widening, and a small length of Feeder above Broad Creek they are now repairing—the remainder is all well settled and in no danger on Ship Canal.

Resolved,—That an immediate application be made to His Excellency soliciting his influence in removing any restrictions which may now exist in landing American produce and propetty on our shores, for the purpose of passing from one Lake to the other on the Welland Canal, and being again re-shipped to an American Port, and should an application to the Provincial Legislature be necessary for passing a Law to that effect, the Secretary is directed to prepare a Memorial to be submitted for the approval of the next Board.

Note.—Mr. Allan and Mr. Boulton will recollect many thousand barrels of Salt were formerly landed at Queenston and re-shipped at Fort Erie for the upper country, without duty or any charge—a similar arrangement or law to that effect, is what is now required—the greatest fear is, the Americans will place some restrictions themselves, if so a greater quantity will be withheld from the Canal, as the New York Market has with them a decided preference.

Resolved, That a Circular be printed and sent to the various Ports on Lake Eric, as soon as the names of the Agents are obtained.

November 3rd, 1830.

At a Meeting of the Board of Directors, held at the Hon. J. H. Dunn's, York,

PRESENT :

The Hon. John H. Dunn, President.
William Allan,
Henry J. Boulton, and
W. H. Merritt, Esquires.

All the Resolutions made at the last Meeting were confirmed except the proposition of J. B. Yates Esq., which having been taken into consideration, the Directors conceived they would assume too great a responsibility to close with his proposal without having more information respecting the value of the property to be disposed of, and conceiving they would be rendering the Stockholders all the advantages the sale could possibly afford by giving it the most extensive publicity.

Resolved. That the Agent be directed to advertise the sale thereof, stating all its advantages, in the Newspapers of New York, Boston, and elsewhere in the States, and Montreal &c., in the Canadas, for which, proposals will be received on or before the landay of March next ensuing.

Resolved. That application be made to the Bank of Upper Canada for the Loan of £3000.

Resolved, That the President draw upon the Bank for the sum of £5694 17 3½, in order that all claims and estimates, due as agreed upon, be forthwith paid to the respective parties.

Resolved, That the Engineer's account be passed, and that Mr. Barrett be notified that the Board expect him to make out an accurate estimate and return of the respective routes to Lake Erie, for which purpose the Engineers have been principally employed during the present season.

Resolved. That the Secretary do forthwith write to the Cashier of the Bank of Upper Canada to retire £7500 of the drafts upon Yates and McIntyre which first became due, out of the £10,000 drawn upon them.

No. 4.

#### REPORT

OF THE

## BOARD OF DIRECTORS

OF THE

# WELLAND CANAL COMPANY,

For the Year 1830.

At the close of the Year (1830) the Directors have the satisfaction of announcing that the Welland Canal is so far completed as to afford a convenient navigation for schooners from one Lake to the other by way of the Niagara and Welland Rivers; while on that portion of the route which is not yet completed on the scale contemplated, namely: from the River Welland to Grand River, a good navigable channel for boats has been made, of equal dimensions of the Erie Canal.

This navigation has been fully tested during the latter part of the season, by the passage of several vessels drawing 7½ feet water. The result has been such as to refute whatever may have been stated to its prejudice; and the Directors; therefore, forbear making any farther remarks on the subject.

The delay which occurred in not opening the navigation as early in the spring as was anticipated, arose wholly from having placed too great a reliance on the guarantee of the Contractor who built the dam across the Grand River, and who engaged to maintain it for a certain period. The stability of every other part of the work has fully equalled the most sanguino expectations of the Directors.

The disappointment in respect to the dam is much to be regretted, as the greater part of the produce had passed over the portage before the Canal was fully in operation. As no preparation, however, had been made for building boats, and as so few of the vessels owned on the Canadian side of the upper Lake are adapted for the double voyage, it would have been impossible to have conveyed the whole quantity of produce with the present means of transportation.

The Directors have now made arrangements to remedy this inconvenience, in the ensuing season; they are erecting store-houses for the reception of property at Dannville, Grand River, Robinson, Deep Cut, and Port Dalhouse; and they are building large covered boats that will carry 600 or 700 barrols of flour.

As soon as Lake Erie is free from ice above the Grand River, buoys will be placed at the eastward of the channel, and 3 lights in range with them, for the guidance of vessels. From thence a daily line of boats will ply to Port Dalhousie, which will be in readiness at the period above stated; and if the season is an ordinary one, the produce taken by this route may be either in the Montreal or New York market before it will be possible to reach Buffalo or Fort Erie.

After the Niagara River is open, such vessels as are adapted for the navigation of both Lakes will, of course, proceed direct from Lake Erie to Prescott or Oswego.

Property that is designed for transhipment will generally be landed at the Grand River, because the vessel will save 48 miles of Lake and 18 miles of a tedious River ravigation. When once the cargo is discharged ir can be transported nearly as cheap from the Grand River to Lake Ontario as from the mouth of the Welland or Chippawa. Still, for the accomodation of such vessels as may pass down the Niagara without intending to proceed further, a sufficient number of covered boats will be kept in readiness at Chippawa, to take through any cargo that may arrive, and in most cases without the owner being put to the trouble of storing it; and, if necessary, a daily line will be kept up on this route, for the season, or until the business of transportation settles into its natural channel.

Time is required to develope the advantages this communication offers. A very great additional expense has been incurred by individuals and the public, to increase the dimensions of this canal so as to admit the uninterrupted passage of property from lake to lake, avoiding the expense, risk, delay, injury and inconvenience of a trans-shipment; but the want of a sufficient number of vessels adapted for the double voyage may prevent the owners of produce on Lake Erie, and particularly on the Canadian side, from availing themselves of this conveyance at all times during the ensuing season.

Experience shews that regularity and certainty in the sailing of vessels on stated days has tended greatly to the facility and increase of commerce. An effort therefore will be made in the ensuing scason to procure a sufficient number of vessels to leave Prescott every other day, if not oftener, for Port Dalhousie; thence to Sandwich, touching at the intermediate ports on Lake Erie. To give this mode of conveyance facility, the aid of powerful steam boats is required on both lakes to tow those vessels to their destination, after passing the canal—an arrangement which there is little doubt be will effected by individual enterprize after another year; when we hope to see a daily line from Prescott to Amherstburgh, as well as from Oswego to Cleveland, and vice versa.

The rolls for the ensuing season will continue at the same rate as the past.

The only impediment in the communication between the two lakes, is found in the Welland and Niagara Rivers. The advantages anticipated by avoiding this channel is shown by a letter received from Captain Bill of the Winnebago (the first vessel that passed from Oswego to Cleveland).

The Board were so cearly impressed with the importance of continuing the Canal direct to Lake Eric the past season, that they caused surveys and estimates to be made of different routes, which have again been examined the present year. No difficulty is presented on either route: the shortest and cheapest is estimated at £17,500; but as the actual expense invariably exceeds the estimates in works of this nature, it may be placed at £25,000.

It has been deemed advisable to offer for sale, on or before the first of March next, all the lands and hydraulic situations belonging to the Company on the line of the Canal, as they can be managed to better advantage by individuals; and the increased toll from the crections that must be immediately placed on the line in order to render them profitable to the purchaser, (who will pay an annual interest from the 1st January, 1831,) will be an equivalent for the increased value of those situations which the Company purpose to surrender.

on hand to the amount of ....

In addition to which a farther sum of £25,000 will be required to complete a schooner navigation in a direct line to Lake Erie. To raise this outlay an application will be made to the Legislature of Upper Canada, for a loan of £25,000, and to the Legislature of Lower Canada for an equal sum.

The Directors seed a degree of satisfaction in making these applications which they have not hitherto experienced. Many gentlement of character and high respectability, were under the impression that the Canal never would or could be brought to assect

cessful termination; and that the sum already expended, and whatever might be further advanced, would be wholly lost. This opinion was circulated with no little industry, and of course produced the desired effect; particularly as it could not otherwise be repelled than by the friends of the undertaking advancing a contrary opinion. The time has at length arrived when the successful completion of the work has silenced those forebodings—so far at least that they can be no longer uttered by men of candor and intelligence.

The rejection of any application heretofore, would have stopped the work, delayed its completion for a length of time, and been attended with the most ruinous consequences. The work is now in a situation not to be similarly affected. Its accomplishment is no longer a question; and the assistance now required, is urged as a measure of policy and expediency, for the consideration of the Legislature; whatever may be the result, no serious consequences need be apprehended.

The only discouraging argument that can now be advanced, is by those persons who estimate the value of this work to the country, merely in proportion to the nett revenue to be immediately derived from the amount of TOLLS received. These may urge that it will never pay; or, at least, not until a very distant period. On this subject the Directors have good reason to retain their former opinion.

In 1831, the Canal which connects the Ohio River with Lake Erie, will be finished; and so also will the Rideau Canal.

In 1832, the necessary preparations will be made for the conveyance of property in vessels or boats suited to the dimensions of those Canals; and in 1833 a quantity of produce will pass this Canal, for the Canada market alone, which is scarcely contemplated by the most sanguine, at the present day.

All we require to insure a profitable return, is to continue the Welland Canal on this most directroute to Lake Erie.

John Henry Dunn, President.
Alex. Y. M'Donell, Vice-President.

Directors.

Welland Canal Office, Saint Catharines, Dec. 31st 1830.

> No. 5. REPORTS

ROBERT RANDAL, Esq.,

WELLAND CANAL COMMISSIONER

With Estimates, de. of George Keefer, Jun., Civil Engineer.

First General Report from the Commissioners appointed under and by virtue of an Actipassed in

the Eleventh year of His Majesty's Reign, entitled, "An Act to grant a further Loan to the Welland Canal Company, and to regulate their future operations."

To His Excellency Sir John Colborne, K. C. B., Licutenant Governor of the Province of Upper Canada, Major General Commanding His Majesty's Forces therein, &c. &c. &c.

At an early period after the passing of the Act authorising and appointing me to examine the Welland Canal and to report to Your Excellency "all such" "facts and information" as I might "deem useful in aid of forming a correct opinion" of that work; "its progress, condition, and future usefulness."—I proceeded to Port Dalhousie, and from thence along the whole line of the Dam at the Grand River, and personally inspected as far as the state of the weather could admit, the Harbor on Lake Ontario, the Deep Cut, the Locks, the Aqueduct, the Feeder, the Dam, and the Excavation generally.

#### DEEP CUT.

As the 13th Section of the Statute requires a very minute and particular examination of the Deep Cut to be made in order to ascertain as far as practicable "the probability there is of the stability or instability of the banks," I have visited and inspected that section of the work from time to time, since the beginning of April, carefully enquiring into and noting down such facts and occurrences as I considered likely to prove useful.

Several slips in the left or west bank have taken place this spring; the surface area of one of them, perhaps exceeding half an acre; but the soil thus deposited in the Canal has partly filled up the vacant space below the new bottom level, and by widening the summit level rather benefited than injured the navigation.—I was informed that at the place where the banks had chiefly given way, during the present year, the workmen on the Canal had first discovered the soft clay bottom, and on further digging arrived at a stratum of quicksand.

An opinion is very generally entertained by per-sons residing near the Canal that the margin will give way in other places along the line of Deep Cutting, and it is indeed probable that such will be the case, for the banks that remain unbroken are apparently in the same unstable condition, as were those places which have already fullen in, the quality of the soil is the same, and they are equally steep; but I do not apprehend any very serious consequences from this state of the banks, for there are now eight, ten, and in some places twelve feet of water and vacant space, in the Canal below its present base level, where the margin has not caved in; and, unless the banks were to give way on both sides the soil (judging from the experience of the last 15 months) would not be likely to fill the Canal any farther than to its base level, and scarcely, if at all interrupt the navigation. The slips that have taken place since the Welland river level was abandoned, have occasioned very little additional excavation or trouble, I found a few laborers employed clearing out a bottom channel of twenty feet width for a short distance, the cutting was neither deep nor extensive....

The banks on the towing puth side are steep but have thus far, shood the test of the seasons, except

 $\mathbf{E}_{5}$ 

in a very few places. When the canal is filled with water, there will be much less chance of the sides giving way in this section, than there is in its present state, and looking at the subject in this its worst point of view, I can decidedly express my opinion that the anticipation of such an event ought not to be allowed to prevent or hinder the completion of the canal, or be received as an argument against its utility as a permanent public work. Were the soil to cave in, so as to stop the passage of vessels, it could be cleared out and placed at a proper distance at no great expense, and without much loss of time, and that is the worst that can happen.

It is to be regretted however, that more precaution was not made use of by the principal engineer employed on the canal, before the sum of eighty-five thousand pounds had been sunk in excavating this stupendous ravine. Had more pains been taken to ascertain by deep boring at short distances, the nature and quality of the substratum, on which the banks were intended to rest and which was to form the bottom level of the canal, a vast saving would have been effected to the colony and the canal by this time, probably open for ships from Eric to Ontario.

I visited the deep cut so late as Tuesday last, and found it open and almost clear of every obstruction.

#### GRAND RIVER DAM.

The idea of obtaining an ample supply of water from the River Ouse, for a ship Canal to connect Lakes Erie and Ontario, is not a new one-it occurred to the Commissioners of internal navigation as far back as 1823, as appears by their valuable report made to your Excellency's predecessor, in the month of February, in that year, and lately republished at Kingston, under the direction of the Gentleman who had been President of the Board. The same means of obtaining a supply for the Welland Canal was proposed to the Board of Directors in 1827 by Mr. Barrett, then Engineer; but was not then acted The dam thrown across the Grand River is nine chains in length and raises the water about 5 feet above the former level. The dam is said to have gradually settled down 12 to 16 inches since last June, the soil is favorable being a clay bottom; the base of the dam is 100 feet, and for a foundation, whole trees were cut down, drawn and laid lengthways into the stream with their branches on; gravel and stone were next thrown in and the work finished with alternate layers of brush and gravel. It is well timbered throughout, and the timbers in the abutment at its south end are well framed, and the workmanship substantial. The north wing of the dam is in want of repairs; it should be filled in, to prevent the river breaking round, and raised with a breast work of timber, brush and stone. 2 or 300 cords of small stones and gravel, if thrown on the top, would mix with the brush-wood and greatly strengthen the dam. South of the dam an embankment has been raised; its height is 9 feet, 12 feet at top; with a slope of 2 to 1; its length 22 chains, I consider the top unsafe in its present state, and would recommend that it be faced with timber and raised 3 or 4 feet higher than the summit level of the river above the dam at high water mark. this Embankment is an artificial channel which is to be filled up, there are also 2 waste wears, on the same side of the river, the apron of one of which is

180 feet, and the other 200 feet, the waste wear farther down, stands in need of repairs.

Persons residing at Dunville informed me that the River rises from two to three feet, that being the range between high and low water level above the dam; last winter's ice did no material injury either to the dam or the embankment. At this season of the year the waters of the River flow over the dam, but it is believed that about one fourth of the stream is lost in the dry season, a great part of which waste water could be retained, were the dam tightened.

According to the best information I could procure, the space open in the dam, at low water last year, through which the stream passed, was two and a half rods wide, and the average depth ten or twelve feet, with a current of five miles an hour. Thence may be inferred the immense extent and value of the water privileges on the Canal in a dry season. Below the dam the river forms one vast harbour four or five miles in length, six hundred feet average width and of a mean depth of twelve or fifteen feet. At the village of Dunnville (so named in honor of the President of the Canal Board, who has greatly exerted himself to bring the undertaking to a successful termination,) the Company have already rented water privileges to three Saw Mills and one Grist Mill, arks loaded with Flour, Pork and Whiskey had arrived from Brantford on the 15th instant at the Feeder, and were awaiting the opening of the navigation to cross the Peninsula to Port Dalhousie. The erection and maintenance of this great Dam across the Ouse is unauthorised by any Legislative Act of this Province; the lands of individuals situated on the banks of the river for a distance of about ten miles. are overflowed without the consent of the owners and without recompense having been afforded them according to the award of a jury of the country, fish are prevented from ascending the river, and neither ark-gap, lock nor apron has been constructed or maintained of a sufficient width and depth to admit boats, arks and rafts.

Application might have been made to the Legislature before or since the building of this dam for authority to maintain it during the pleasure of parliament, and to regulate the mode of compensation to persons aggrieved, &c., but it has not been done. will be for the Legislature to determine now far the circumstances in which the company were placed could be considered as an excuse for their violation. of the laws which assure and protect the rights of persons and property in this province. Had the dam been built at the mouth of the River it would have tended to render the country more healthy—as it is, the lands below Dunville will long continue to stand in the way of the comforts of the inhabitants," much of this level piece of water" (observed Mr. Geddes) "is bordered by a sedgy shore where rotten vegetables are acted upon by the fluctuations of the lake, and the beams of a hot sun; and from this decaying mass rises a vapor that makes the lower part of the Grand River Valley unhealthy—covering this amphibious description of shore with a body of water that will remain permanently upon it, will doubtless act with great effect in improving the health of this sickly region of country and will be hailed with joy by those living at the naval depot."

# THE FEEDER OR BOAT CANAL.

From the Grand River Dam to Broad Creek, a distance of five miles, the feeder is 26 feet wide at top, 10 feet at bottom, and from 4 to 5 feet deep, when filled, it will overflow a considerable portion of the surrounding lands unless an embankment is thrown up on the berm or west side, and the surplus waters conveyed through, below the canal, by means of a culvert into the River Ouse.

I was informed that the country here is sickly, but that after passing Brond Creek into the Tamarisk Marsh, it becomes healthy and free of fever. In this section the water used is tinged with the bark and leaves of the Tamarisk, to which the workmen ascribe their healthful state. From Broad Creek to the main curve, the point where it is supposed that the feeder will intersect the ship canal, the excavation is twenty feet wide at the bottom, thirty-six feet at the surface, and upwards of four feet deep, this section is 14 miles and 50 chains in length, and perfectly straight-It forms one of the most magnificent avenues in the world.—On this line, at the village of Matshville, there are two miles of cutting upon the old route of the width of a ship canal, which have been abandoned-It is said to terminate in an excellent mill site, but I did not examine it. I will go over it some time during the summer and see whether or not it could be employed in any way, so as to defray in some degree the heavy expense of its excavation. Marshville is but four miles distant from Lake Eric, it is the centre of the Company's 13,000 acres of land. From main curve down to the aqueduct, where the waters of the canal pass over the Welland River, the distance is three miles 30 chains, and the feeder is constructed with 20 feet bottom, a slope of 2 to 1, and is from five to six feet deep, wherever there was low cutting it is the full width of the ship canal, and the alleged object in making it deeper near the Deep Cut is thereby to draw a more plentiful supply out of the Grand River. From the aqueduct to the village of Beverley, at the commencement of the Deep Cut, a distance of three miles, the same general dimensions are continued. The plan of the feeder is four feet water in the Canal at the dam; thence to Marshville, a gradual descent of 6 inches; thence to Helmes Creek, other 6 inches; thence to Carl's ravine, 6 inches; and thence to the Deep Cut, 6 inches, in all a descent of two feet; natural reservoirs being provided at each 6 inches of descent.

The carpenter work of the Bridge over the seeder at or near the dam, is well done, but the abutment wants repairs; from thence to Broad Creek, there are two waste wiers, and tow-path bridges over them, the carpenters work of which is sufficient, also at Broad Creek, a flume, the carpenter work of which is not good; the gates are insufficient and some puddling is required—the bridge and waste wier at Helmes', are in good order.

#### THE AQUEDUCT ACROSS THE WEL-LAND.

This is an excellent piece of workmanship, and a monument of the superior skill and ability of, M. Marshall Lewis, the Builder and Contractor.

THE WORKS AT OR NEAR CHIPPEWA.

The swing bridge across the Welland at Chippewa village, is a substantial piece of workmanship,

and admits the passage of ships or steam boats of 40 feet beam, that part of the original bridge which has not been repaired by the Company is in a decayed state.

The towing path on the banks of the Welland, is incomplete, as is that from thence to Fort Erie.— The Canal or Cut across the point at the junction of the Niagara and Welland Rivers, has been completed with the exception of some dredging at each end. This work is extremely well done, and adds to the safety and convenience of the navigation greatly; the depth of water in the cut is 8 feet. It is proposed to build a steam boat at Chippawa, to navigate the rivers Welland and Niagara, and sail between Beverly at the Deep Cut, and Fort Erie, making one trip each way daily.

## THE LOCKS, WASTE WIERS, &c.

Locks No. 1, 2, 3, are 32 feet wide and 130 feet long—above St. Catharines, the locks are 120 feet in lengsh by 22 feet wide in the clear; in lock No. 7, at the lower corner on the west side, the joints have started down the stream a little but not so as to injure the lock or the navigation.

In lock No. 5, the timbers inside have sprung inwards about 12 inches, the width therefore is only 21 feet; locks 8, 9, 10, 11, 12, are in good condition, some puddling will be required at No. 12.

Lock No. 13, has sprung in the width at top, but not so as to injure it, at the lower corner the joints have sprung open a little. Lock No. 14, bilged out like No. 13. Lock No. 15, requires some puddling or filling in, and the gate post will have to be re-paired, some other repairs are wanted, but it will not prove an obstruction to the navigation. Lock No. 16, bilged out like 13 and 14, No. 17, a good lock, and in good order. Locks No. 18, 19, 20, 22, 24, these are all in good condition—some puddling is required at No. 18; Lock No. 21, is bilged out as much as 26 inches wider.—There is a bridge across the canal here which is in good repair. The lower corners of lock No. 23, are not well put together-lock No. 25, is in good condition, at this place is the commencement of rock excavation between locks 25 and 26, the rock is full of chinks and the water leaks through at bottom, to the serious inconvenience and damage of the farm adjoining, which is owned by Mr. Ker, a settler from Scotland-No. 26, is a good lock of fine workmanship, the lower end of this lock and of No. 25, are handsomely faced with stone, laid up in dry wall.

The carpenter work of lock No. 27, is not well done; Lock No. 28, same as 26. No. 29, a good lock of fine workmanship. Lock No. 30, the same. The waste weir apron is too narrow. Lock No. 31, in good condition, a waste-weir between, and No. 30, and a waste-weir above, both in good order. Between 31 and 32 a highway and bridge across. No. 32, is a fine lock, the same may be said of 33 and 34, close by 34 is Mr. Keefer's gristmill, and a growing village of 15 or 20 dwelling houses. No. 35 is a good lock, and there is a bridge over the canal in this place, between this and the road from Decou's mill, is a waste weir in good order. On the Beaver Dam road there is a bridge which wants raising on the pivot. Between Malatt's and Upper's are 4 culverts in excellent condition. No. 36, is a complete lock, except the paddle gates which the

Company are about to alter, some puddling required, waste-weir good. No. 37, is a good lock, from this upwards about a hundred yards of excavation will be required of nearly a foot in depth, a short distance above the Lock there is a Saw Mill, and a flume is in progress for the purpose of draining the Deep Cut whenever it may be necessary to do so.

The Carpenter work on the whole line from the Harbour to St. Catharines appears to be substantial and in good order, except two Tow-path bridges.— The Towing-path Bridge at Lock No. 10, requires some repairs. I have availed myself of the experience of a Muster Carpenter in matters appertaining to his line of business, and obtained the advice and assistance of professional and other persons in whom I could place confidence in all such matters as seemed to me to require counsel and information, great deal of doubt has been thrown on the stability of the Locks and perhaps some of them may give way-but I have not had reason to apprehend such casualty from any thing which came under my observation. I examined the Locks one by one very carefully as required by the Act, and consider them upon the whole as fine a specimen both in design and workmanship as any others which have come under my observation on this continent. I ascertained, by enquiring at the carpenters that the timber employed has been cut down at a proper period of the year, and not when full of sap, and that it was afterwards The Lock gates, however should be made sensoned. of sunk oak, or timber that has been immersed some time in water and afterwards thoroughly dried, such timber is very difficult to work, but makes a superior job, and it is well known that Canal Lock gates are in Canada exposed to great changes of climate, being from the duty they perform neither wet nor dry.

## PORT DALHOUSIE.

This harbor has an advantage over that at Burlington in being less exposed to the storms on the luke; and the soil which is a fine tough clay is far more favorable for the purposes of canal navigation. The piers, dam, waste wiers, entrance lock, and other works are in good order, having withstood the freshets of the creek from within and the storms of the lake from without, without suffering any material injury. Inside the lake lock, above the waste wier, there are from 10 to 12 and in some places 15, feet of water in the channel for nearly two miles up the valley of the 12. I ascertained the depth of the water in this harbor at two different periods; the first was in the beginning of this month, and the last time on Monday last, the lake was culm on both occasions, and the depth of water about the same. On the lower sill of the lock I found 131 feet of water, and outside the lock between the piers, the soundings were from 81 feet to 10 feet 11 inches, two machines were in operation deepenig the channel.

Beyond the piers in a line with the entrance the depth of water ranged from 10 feet 9 inches to 12 feet 6 inches, until upon the bar where the soundings were from 9 to 10 feet. Farther out in the lake about a hundred yards in the same direction I found fourteen feet of water. The bar is about a chain in width, and in the two intended channels the least depth upon it is nine feet. It is intended to extend the main pier sixty feet further into the lake, and to place another pier across the bar in the same line

from the lake, excavating the channels sixty feet in width and eighteen inches deep across the bar. The other ship chunnel, north of the main pier head, is to be excavated to the same depth, and a buoy placed on each side of the entrance for the guidance of the mariner. For his guidance also two lights will be placed in a line with each other, and in a line with the main channel, at a proper distance. It is of consequence to the prosperity of the canal that this har-bor should be speedily deepened and improved so as to ensure the regular reception of Steam Boats. A western merchant, after his property has arrived at Fort Erie, can depend upon its being forwarded to Montreal by a given day if sent over the portage and by steam boats from Queenston. To ensure confidence to the Welland Canal it is obvious that it should possess the same facilities for the regular transit of property by steam navigation that are enjoyed on the Queenston route. Lake Ontario is now understood to be between 15 and 24 inches higher than its level at certain seasons of the year, and its waters rise and fall not less than 3 feet, taking one season with another in a period of five or six years. I think it will be found necessary hereafter to widen the entrance lock, so as to admit steam boats of the size now navigating Lake Ontario, into the great dam, and if it should be determined to make this alteration, the lock ought to be placed at the first turn, about a hundred yards above its present scite, which would leave a large and convenient basin for steam houts and other large craft, the space outside the lock between the piers being too much confined. On the dyke of the great pond a mill with a horizontal or "reaction" wheel has been erected for years which I was informed had done considerable busi-Already has the anticipated commerce of the canal begun to attract capital to port Dalhousie. They are building houses and stores and erecting granuries, and one merchant has established a wholesale store with a heavy stock of British goods. road from this place to Ningara is much wanted.

The towing path from Port Dalhousie for several miles up the creek is an artificial mound of earth raised on the left bank of the natural channel. It follows the windings of the creek, and will have to be stoned up to prevent it from washing away, as will many of the artificial embankments on the line. The Eric Canal had to be stoned up on each side for many miles to prevent the soil from filling up the channel, but these improvements can be made in the winter seasons, when experience shall prove them to he necessary after the canal is completed. A floating bridge is made through the towing path, about two hundred yards above the entrance lock to enable vessels, raits, &c. to pass from the canal into the grand basin. Should it be considered expedient to widen the present entrance lock instead of removing it further up the canal, I would suggest the propriety of placing another floating bridge on the towing path immediately above that lock.

## WATER POWER.

The advantages possessed by this line of canal for impelling machinery are very great. At the grand River Dam there is water enough to spare for impelling a number of mills. At whatever place on the lake the Ship Canal shall terminate, there will be a fall of probably six or seven feet, with a never failing supply of water for mill purposes—a most

important acquisition, should the navigation terminate in the Sugar Loaf settlement—for on the lake shore in a distance of forty miles above Fort Erie there is but one mill seat, which though an indifferent one was obtained by laying upwards of six hundred acres of fertile land under water many years ago presenting an unpleasing spectacle to the eye and generating fever among the settlers. At the ground plot of the village of Beverly, where the Canal locks down into the Welland River, there is a descent of about sixteen feet with a large reservoir into which the feeder Canal will discharge its waters, and where manufactories requiring water power might be carried on to great advantage. north end of the deep cut, after the commencement of the mountain descent, a waste wier turns the superflous water around two locks, a fall of sixteen feet, after which it enters the Canal again, and may be used for any manufacturing purpose whatever. Then, at Thorold, it is conveyed around four Locks then around thirteen Locks until it re-enters the Canal on Shaver's furm below the mountain ridge, then around locks until it enters the Canal at St. Catharines. By this contrivance, the mills and machinery that may be hereafter erected in the course of this descent can be continued in operation even at such times as the locks or sections are undergoing repairs.

Mr. Keefer of Thorold, has built on the line of Canal an excellent grist mill of the most durable materials, the walls are of stone and the machinery is worked by cast Iron wheels. It is calculated for eight run of stones, and has four run of French Burrs completed, this mill is one of the finest establishments of the kind in the colonies. Six mills have been erected along the line of canal, four more are now in progress and applications to the Company for water power to turn other fifteen grist-mills, saw mills, carding and fulling mills are now under consideration.—These hydraulic privileges will prove a never failing source of revenue.

#### UNFINISHED WORK.

A considerable outlay will yet be required to complete the Welland canal. The line of cutting to its termination in Lake Erie, with the expense of improving a harbor there; the alterations and improvements at Port Dalhousie, the lock and other additions at the Grand River dam, the widening the feeder to boat canal size, from Dunnville to Broad Creek, the stoning up of the banks where it may be found needful, and the erection of a weighing lock, are some of the principal items. Unforeseen accidents may likewise occur, and swell the list of expenses; but I have stated the grounds of my apprehension wherever I considered a possibility of danger or risk to exist.

# TERMINATION OF SHIP CANAL ON LAKE ERIE.

The "future usefulness" of the canal will partly depend upon the skill and judgment that may be displayed in the selection of a place at which to carry it into Lake Eric, and as the Legislature have decided to defer that part of the work until the several routes shall have been examined, and reported upon; it is my intention in the course of the present summer, carefully to examine the coast; and, being assisted by professional men in whose skill and integrity I can

place full reliance, to collect all the information necessary for enabling the Legislature to decide upon the advantages and disadvantages of the several proposed harbors and lines of canal, and to report the same to Your Excellency. Early in the present month I traversed part of the country between Marshville and Lake Erie, and found it favorable for canal purposes, so far as an examination of the surface could enable me to form an opinion. I visited the coast from Gravelly Bay up to Kinnaird's Bay, which latter is situated in that beautiful tract of country known as the Sugar Loaf settlement, 4 miles from Marshville. Graybiel's bay is 24 miles above Fort Erie, 20 from Chippawa village, between 6 and 7 from the acqueduct over the river Welland, and about 6 from the nearest point on that river, due north; abundance of gray freestone may be had within a mile, and hard wood is abundant, the bay is sheltered on the west by Point Industry; and, according to the information received from Mr. Craybiel, its bottom is hard clay, covered with a layer of sand and gravel, from one to four feet in Gravelly Bay, otherwise called Steele's Bay, is about four miles below Mr. Graybiel's house, and  $5\frac{3}{4}$  miles distant from the line of canal or feeder, it is protected both on the East and West by ledges of rock which extend a considerable distance out into the lake. If on due examination it should be found that Graybiel's Bay possesses as many natural advantages for a harbor as Gravelly Bay, it is (taking the two only into consideration) otherwise entitled to a decided preference—the country round the latter being low and unhealthy, while the lands in the neighborhood of the former are pleasant and salubrious, affording most desirable situations, on which hereafter to build a village or city.

The settlers informed me, that from Sugar Loaf up to the Grand River, the ice in the lake and bays breaks up much about the same time, and that this year it began to give way on the first day of March; and finally cleared out from Graybiel's Bay on the 22nd of that month. From such information as I been able to obtain, I learn that the ice left Buffalo harbor this year on the 19th day of April, a month after the lake was open from Gravelly Bay and upwards on the British side. Last year the Grand River and Lake near it were open and clear of ice on the 11th of April; and it is stated in a supplementary report of the Board of Directors of the Welland Canal, that no vessels could have entered the port of Buffalo from the upper parts of Lake Erie that season, earlier than the 14th of May. By means of the boat navigation, termed "the feeder," the main canal will be placed in communication with the Grand river, which is now navigable for 12 miles above the dam; and it appears by the evidence afforded to a select committee of the House of Assembly, during the session of 1828, that a moderate expense it can be opened for boat navigation many miles higher up, passing through a rich and populous section of country, abounding in timber of all descriptions, and which now exports annually a large value in flour, ashes, pork, whiskey, lumber, gypsum, and other produce. By the feeder, the main canal will be placed in communication with the main canal will be placed in communication with the waters of the Grand River, below Dunville, as soon as a lock shall have been erected in the dam; and with the Niegara River above the Falls, and the populous and woolthy southements on its banks, it is

connected by the River Welland, which is also navigable for at least eighteen miles beyond the Deep Cut, into the interior of the Niagara district. The canal intersects nearly 30 miles of country, fertile and well settled, and is accessible from Lakes Eric and Ontario with schooners. Being chiefly intended for schooner navigation, the shortest possible route to its grand western termination that offers a safe and convenient harbor ought to be adopted.

The attention of the Legislature of Upper Canada appears to have been early attracted to the importa t subject of uniting Lake Erie with the Oceanin 1821 a statute was passed authorising the appointment of a commission, "for the purpose of exploring, surveying, and levelling the most practicable routes for opening a communication by canals and locks between Lake Eric and the Eastern boundary of this province"-that commission reported early in 1823, in favor of a ship navigation throughout; and considcred it of the highest importance that the assistance of Lower Canada should be obtained. Of this line the Welland Canal is the only part which has been attempted to be opened, and it is gratifying to perceive that the undertaking approaches towards a successful termination. To Mr. William Hamilton Merritt, the Superintendant, great praise is unquestionably due, for his indefatiguable exertions to accomplish the work, though often placed in very difficult situations. I heartily concur with Capt. Basil Hall, in the opinion he has expressed "that to" Mr. Merritt's "rorseverance and knowledge of the sub-"ject, as well as his great personal exertions, this "useful work stands mainly indebted for its success."

#### A COMMERCIAL EMPORIUM.

It is a circumstance greatly to be regretted that Upper Canada remains destitute of a commercial emportum under its control, and to which its rich and growing commerce could be directed. The trade of The trade of this colony being attracted to Montreal and Quebec, diffuses its "genial warmth" over the whole of the sister Province, adds to its wealth, its productive industry, its power and its population, and yields a rich revenue over which we have not that efficient control to which it appears to me that we are of right The means of paying the interest and ultimately the principal of a Loan which would be sufficient to continue the navigation of the Welland Cunal, unbroken, to the Ocean, is in the hands of the sister colony, and chiefly arises out of the commerce of the ports of Montreal and Quebec. A further claim on the Legislature of Lower Canada for assistance to defray the cost of the Welland navigation, seems to me under those circumstances fair and reasonable.

Provided the produce of the upper Lakes within the territories of the U. States, shall be allowed to pass through the Canal, the tolls will be greatly augmented, a considerable traffic created, and the countries on its borders enriched; it is by far the best and cheapest route even to the New York market, and will of course receive a preference. The expenditure upon the Canal has given a large and wholesome circulation to money and ensiched many. Villages are starting into existence upon its borders and new employment is created for individual industry. New capital is attracted and put in operation; settlers are induced to purchase lots and commence improvements, and the additional value of their skill

and labor will add to the wealth of the Province and the strength of the nation. In proportion as this Canal will enable the agriculturist, in countries beyoud it to bring produce to market, and carry merchandize back into the interior at a cheaper rate of freight and by a speedier mode of conveyance than he formerly possessed, in like proportion will it augment the value of property in these countries, and induce capitalists, enterprising men, to form settlements where without such improvements in the means of transit they would not have been thought of. The migrations of the productive class from Europe to the United States and especially to the state of New York, of late years, have been considerably augmented by reason of the Canals and Railroads carried on in different parts of the Union. To the commerce long established, carried on with the north west territories, great additional facilities will be afforded in the means of transporting goods and stores upwards and furs downwards, a region will be opened to the inquiries of the active and enterprising which is as yet but little known to Europeans, "Upper Canada" according to the statement contained in the report of the Joint Committee of the Legislature of this Colony of 1825 on internal navigation " contains an area of about 50,000 square miles" "regarding only those parts of it within the great waters which appear to be capable of cultivation," "the soil of which is with very little exception most favorable to agriculture, and the climate being equally propitious, there is no doubt that when sufficiently peopled, its productions and consequently its trade must be immense." The character and happiness of the people is intimately concerned in the extension of agriculture and the increased productiveness of the soil, and hereafter the wheat raised on the banks of the Lakes Huron and Ontario will enter into successful competition in the markets of Great Britain with that of New York and Baltimore, of Dantzic and Odessa, and a commerce be established through the Welland Canal alike important to the Merchant and beneficial to the Agriculturist: With the pecuniary affairs of the Canal, the system of letting out Contracts, the mode of measuring the excavations, and of conducting its business generally, I have but a very slight acquaintance, but shall endeavour to inform myself on these points before transmitting to your Excelleny my concluding Report upon its condition. The Tolls during the present season will not be a fair criterion by which to calculate the commerce of future years, large quantities of produce have already passed downwards by the portage at Queenston, the owners being generally anxious to reach the market as early in the season as possible. In the Ohio, one house alone was prepared to have sent through the Canal to Oswego four or five thousand barrels of Pork had the navigation been open on the 15th inst. Economy in the expenditures of money, moderate rates of toll, and a prudent careful mangement of the affairs of the Canal may enable the Stockholders before; long to divide a fair percentage annually, after paying interest, on Loans and the necessary charges for officers and servants. The future usefulness of the Welland Canal will greatly depend upon the removal of the obstructions which now impede the navigation of the Saint Lawrence below Prescott:

In time of war the Rideau Canal may be eminently serviceable and the expenditure laid out in its construction is enriching the colony it but it is to the Saint Lawrence we must look for the cheapest and best mode of conducting to the Montreal and Quebec markets the produce of the vast countries bordering upon the great Lakes, and of receiving the most bulky and heavy of our imported merchandize. the shortest and most direct route to the Atlantic, and the natural channel of the countries on its banks.-When a Schooner can take in a load of wheat on Lakes Erie or Huron, and proceed to Montreal without transhipping her cargo until she is placed at the side of the vessel that is to convey it to Europe, an immense benefit will have been conferred on these colonies, and a stream of commerce directed, at a comparatively trivial expense, to the greatest emporium of British manufactures and merchandize in British North America. The expense of improving the Saint Lawrence is as nothing when compared with the advantages that its uninterrupted navigation would confer. Capt. Bazil Hall, in his observations on the Canals of Canada, scems to have been fully aware of the value of the Welland, and how much its future usefulness would be increased by the improvement of the St. Lawrence. The most obvious and natural, and which will soon be the most advantageous communication with the sea," observes Capt. Hall, "is that, by the river Saint Lawrence." One grand step towards the accomplishment of this object which is of the highest importance, not only to the Canadas, but to the parent state, has already been made by the construction of the Welland Canal, as it links together all the upper Lakes by means of a ship Canal with Lake Ontario. Were the navigation of the river Saint Lawrence unimpeded, during its course from Lake Ontario to the sea, there would he nothing farther to desire on that point, and Upper Canada would then virtually be what it ought to be, but what it certainly is not at present in any sense of the word : a maritime Province of Great Britain .-The advantages to the Colony, and also to the mother country, which would flow from the increased facility of commercial and other intercourse between them, which these channels would open, are more considerable than many people are aware of: "It may be worth while," therefore, to consider the means which it is proposed to adopt, in order to facilitate the direct intercourse between Great Britain and Upper Canada. The opening of a navigation which is now about to carry the ships of Lake Ontario to the rapids of St. Mary, and eventually to the remotest shores of Lake Superior, will form an important erain the history of Canada, "futurity will disclose the benefits it will produce, and experience will pronounce an unerring decision." A vessel arriving at Buffalo or Black Rock with goods or produce for New York, transfers her cargo in the Canal Boats, from whence at Albany they are transhipped into Schooners or Tow Boats and pay treble freight.

The Welland Canal will carry produce from the most remote inlet, on Lake Huron to the Port of Prescott; and as soon as the Saint Lawrence shall have been improved, to Quebec or Halifax in the same bottom in which it was at first shipped. Men of business will readily, perceive what an important advantage will thus be gained in the saving of double or treble freight

In concluding this Report I beg leave very respectfully to congratulate your Excellency upon the prosperous and forward condition of the Canal generally, Lifeel that at will daily deservedly become more and more an object of public confidence and of

public interest:—and should this plain statement of facts prove successful in removing, in part, the doubts of some and the fears of others, with regard to the stability of the works, I would be pleased and gratified. When the Canal is opened and has practically manifested its usefulness; for strengthening the ties of social connexion, for promoting and encouraging the progress of the arts of civilized life, for advancing the great interest of productive industry, and for establishing the blessings of easy intercommunication within the Province, then will it be considered that the grand system of internal improvements has had a fair and successful trial amongst us, and that the policy of continuing the line from E rie to the ocean has obtained in its favour the test of experience. Should the junction of the great Lakes with the Atlantic, by the line of Ship Canals thus happily begun be accomplished during your Excellency's administration of this Government, your Excellency by promoting and encouraging the great work would descrive the lasting gratitude of the colonist, and the approbation of the British Nation.

ROBERT RANDAL.

Chippawa, May 31st, 1830.

> YORK, UPPER CANADA, 5th February, 1831.

I have the honor to trausmit to you for the information of His Excellency the Lieutenant Governor, the enclosed Report of the Welland Canal, being the second Report I have furnished as Commissioner appointed by the Legislature.

The various documents alluded to in this Report; are herein enclosed. In performing the various and arduous duties entrusted to me, I hope I have not failed to afford His Excellency every information connected with the Welland Canal, which has required my constant attention since I first commenced my duty as Commissioner, about the beginning of

"I have disbursed expenses &c. as per accounts and vouchers, the sum of £201 16 10 Currency; leaving a bulance due me from warrant for £200 of £1-16-10 Currency, Tibeg leave to request you will be pleased to call the attention of His Excellency to the favorable consideration of my services, and to direct such remuneration to be made me, as His Excellency may think fair, with a just view of the labor and responsibility which has devolved upon me I have the honor to be,

the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the s Your most obedient,

Humble Servant;

ROBERT RANDAL, Commissioner for the Welland Canal.

To his Ercellency Sir John Colborne, K. C. B., Lieutenant Governor of the Province of Upper Canada, Major General commanding His Majesty's forces therein, &c. &c. &c.

MAY IT PLEASE YOUR EXCELLENCY,

The report which I had the honor to lay before your Exceelency eight months ago, contains a full account of my proceedings under the authority of the Canal act up to that period. The following statements are a continuation of the same subject:—In November last I examined the Deep Cut, and found that its banks had sustained no additional injury but that they remained in the condition stated in my former report.

Since the month of July last, 797 cords of stone have been laid on the dam at Dunnville, in the Grand River-that work is now in good condition, substantiul and likely to prove permanently useful, it may possibly require a few additional cords of stone year-ly, for eight or ten years to come. The inclined plane at or near its centre, is 70 feet long, and 30 wide, having a full of one foot in ten; at each end of the dam is an abutment filled with stone. The embankment has been improved within the last eight months; it is now 1500 feet in length, 75 feet wide at base, and 15 at surface, 12 feet high, with a piling for a break-water extending from the dam threefourths of its length, three waste-wiers are placed at the south side of the dam, one of which is 150 feet, one 130, & the 3rd, 210 feet in length. At Dunnville there are three saw-mills, a grist mill, and carding machine, all of them in full operation. The state of the locks justifies the expectations I formerly expressed, with some little repairs they have been kept in good order during the past season, the feeder extending from Grand River to Robinson, is in length about 26 miles, and varies in depth from 4 to 6 feet, it also answers the purpose of a boat navigation. From Broad Creek to the aqueduct the width of the feeder or boat canal is from 36 to 44 feet at the surface. From the head of the Barefoot rapids, on the Grand River down to the dam at Dunville, there is a full of To obtain a feeder from these rapids for the Welland Canal, would, according to the estimate of Mr. Geddes, in 1828, cost upwards of £50,000. To make the Grand River navigable from Brantford to Dunville, for bonts, it is estimated by Cusack and Lewis, that 8 or 9 locks of 4 to 5 feet lift, would be required, with dams involving an expenditure of £17,500. A towing path is now in progress from the Grand River dam to the mouth of the river, a distance of 44 miles, the expense is estimated; at £500. From 5 to 6 thousand dollars are to be expended in a dredging scow, long bosts and ware houses, at the mouth of the Grand River by which to hasten the transit of goods and produce between Lakes Erie and Ontario at the opening of the navi-gation in the Spring. The towing path from the locks at the head of the Deep Cut to the mouth of the Chippawa Creek, will cost about £1,000, two-thirds of this distance have been completed. statement of the improvements made within the last 8 months; or in progress at Port Dalliousie, is annexed to this report, and marked A. In September last I accompanied Mr. Samuel Keefer, the Engineer, in a survey of the north shore of Lake Ereand the Ningara river; from the mouth of ther Grand River to the mouth of the Welland, the distance

being 61 miles 131 chains, the particulars of that survey are appended to this report marked B.

Messrs. McDonell, Barrett, Lefferty and myself were appointed by the Board of Directors a committee to examine and report on the damages sustained by the Indians and others in consequence of raising the dam at the Grand river; and as an enquiry into complaints made by individuals of injury done them by the operations of the Company became a part of my duties under the Canal Act,—I accompanied Mr. George Keefer, junior, and Mr. McDonell, in August last, on a survey and examination of the drowned lands on the Grand River up to the head of the Delaware flats. A copy of Mr. Keefer's estimates, with remarks, is herewith submitted to your Excellency's consideration numbered or marked C.

In the months of September and October last, I took soundings at the mouth of the Grand river, at the sand bar, at its entrance. The depth of the channel is 4 feet and it shifts its place-The width of the bar is a chain and a half; and twenty chains from the mouth of the River the depth is 15 feet on the bar; in other places than the channel, the depth varies from 14 to 34 feet. I examined the several bays and inlets on the lake, commencing with the Bay in front of Furry's let, Township of Moulton, Boulton's truct. At a distance of 300 feet from the beach or north shore, the depth; of water increases from 4 to 10 feet; at 900 feet distance the depth is 14 feet, and at 1600 feet it increases to 22 feet; this bay is much exposed to South West winds, its bottom is rocky. Boulton's Bay in the same township, is in front of lot No. 5, Boulton's tract; at a distance of 90 feet from the beach or north shore opposite Cranberry Creek, the depth of water is 4 feet; theuce out 150 feet, the depth increases to 54, 6 and 63; in the centre of the buy, at 300 feet 74 at 600 feet 9, at 900 feet 10, a quarter of a mile from the shore the depth is 14 feet, and 70 chains out it is 5 fathoms; this bay is well covered from south west and westerly winds by Bluff point, and by a small point below Furny's, it has a sandy bottom. An estimate of the expense of completing the canal to this bay, is attached to this report and marked F. My remarks on Kinnaird's bay, and Graybiel's bay, to-gether with estimates by the Engineer are entered in the Appendix marked D; and E.

Gravelly Bay is situated in the township of Humberstone, in front of Lots No. 26, 27, and 28. It seems formed by nature for a Harbor, being protected on the West and South East sides by rocky shoals, the first extending 550 yards from the shore into the Lake, and the 2nd 570 yards. Between the extreme points of these shoals there is a grand entrance of 620 yards into deep water, a capacious basin with a sandy bottom. A description of Gravelly hay with the soundings and distances, will be found on the map of the Ningara peninsular, which accompanies this report.—It will thence be seen that the depths of water, at the entrance of buy between the shoals, varies from 8 to 25 feet, Laving a channel adapted to ships of any burther: that the soundings in the bay from the north shoretime line to the entrance, 770, yards, varies from 7, to 25 feet; that from the beach at loc No. 27, traversing the curve of the bay to the South Eastern shoel, midway, the depths are 7, 10, 11, 12, 112, 104, 104, 11, 13, 12, 151; that our

posite Steele's Tavern, between lots 29 and 30, west beyond the bay, the depth of water 300 feet out in the lake is only 5 feet; that 450 feet out it is a fathom; 600, 7 feet; 900, 11 feet; 20 chains, 14 feet; 40 chains, 3 fathoms; and that 200 yards south of Sugar Loaf point, which lies in a south west direction from the North shore of the Bay,—the depth of water is 7 feet; 440 chains out, it is 10 feet.

The land adjacent to Gravelly Bay, is, first a narrow ridge or bar of sand; then descending to a marsh, beyond which is a swamp; Gravelly Bay appears to me to possess very superior advantages for a harbor at which to terminate the ship canal: it is the best and the deepest on the coast and also the nearest to the aqueduct. The line of cutting described on the map extends 5 miles 1320 yards to the nearest point of the ship canal, but as it is probable, that in choosing the most favorable ground for excavation it would be found expedient to depart from a straight course, the extent of Canal to be made might perhaps exceed in length six miles (see Appendix G.) I personally examined the route from Boulton's Bay across the country to the Canal feeder, also the surveyed routes from Kinnaird's, Graybiel's

and Gravelly bays, to where they intersect the Canal. I have reason to believe the Reports of the Engineers. concerning these routes, to be generally correct; with regard to the estimates of expense of excavation, they are at best conjectural. The distance that would be saved in navigating the Canal from Lake to Lake by oponing a sloop navigation, on the shortest route from Lake Erie to Lake Ontario, would be 41 miles 37 chains. I have examined into the mode of doing business, letting out and measuring work done by Contract and generally into the pecuniary affairs of the Canal and find no great cause of complaint. In the statements of the last annual Report of the Canal Directors I fully concur, and consider their intended application for a further Loan justified by the condition of the work and the advantages that are anticipated from its early completion.

This Report is accompanied by a profile of the Canal, a map of the Niagara Peninsula, and an official copy of the Report of the Board of Directors of the Welland Canal hereinbefore referred to.

ROBERT RANDAL.

October, 1830.

SAMUEL KEEFER

(C.)

At the request of the Committee appointed by the Board of Directors of the Welland Canal Company, to examine and report on the damages sustained by the Indians and others, in consequence of raising the Dam on Grand River, I beg leave to state, that, in September, 1829, when the water had raised two feet on the Dam, I made a survey of all the lands as far up as Norton's Flats, which had been or would be overflown by the water in the Dam. The grain then destroyed is submitted in Statement No. 1. The number of acres of land covered, as per Statement No. 2. In the month of August last (1830) in company with Messrs. Randal & M'Donell, I concluded my survey of all the drowned lands up to the head of the Delaware Flats, the water then being up to its full height, this is also continued in Statement No. 2. There also examined the claims of sundry individuals, presented by the superintendent of the six nations, on which I have given my opinion, on what appears just, to be allowed in Schedule No. 3.

# STATEMENT No. 1.

NAMES.	Amount.	REMARKS.
Joseph Downey, 20 bush. buckwheat at 1s. 3d John Lymburner, 40 bushels corn, at 1s. 10½d John M'Donell, 4 tons hay, \$3  Henry Docksteder, ½ acre buckwheat  Henry Docksteder, 3 tons marsh hay, \$3  Barton Far, ½ acres corn  Avary Burnham, 3½ acres corn  Avary Burnham, 2½ acres conts  Avary Burnham, 3 tons hay, \$4  Avary Burnham, 20 bushels potatoes	** s. d. 1 5 0 3 15 0 3 0 0 0 12 6 2 5 0 2 16 3 0 12 6 6 0 0 3 2 6 3 0 0 1 5 0	Marsh hay inferior quality, 20 bushels per acre, at 1s. 3d. per bushel. (D.)

Kinnaird's Bay is in front of Lot No. 19, Township of Wainfleet.

#### SOUNDINGS.

Distance from shore 300 feet out, from 4 increases to 8 feet.

300 to 450 depth 9 increases to 10 feet.

450 to 600 variations in depth 10½, 11½, 12, 14 18.

600 to 900 25 feet

900 to 1200 30 "

Soundings taken from opposite the mouth of marsh creek; centre of bay, a south course from beach.

Bay exposed to west and south west winds.

I also took soundings from the extreme point of a reef of rocks which project or extend out from Neff's Point.

At a distance of 300 feet from this reef, out in the Lake, the depth of water was 4 feet, thence 150 feet further out, 6 to 7½ feet, thence 150 feet further, 9 to 9½, 660 feet out, depth 10 to 11,900 feet out, depth gradually increases to 12, 13 and 14 feet.

For a quarter of a mile on the west side from the beach the bottom of the bay is rocky.

#### GEORGE KEEFER,

Assistant Engineer.

St. Cathabines, 3d February, 1831.

(E)

## GRAYBIEL'S BAY.

#### REMARKS BY THE COMMISSIONER.

Graybiel's Bay is in front of Lots 9 and 10, in the Township of Wainfleet.

Soundings taken by me, from the beach opposite the line between lots 9 and 10; thence south half a mile to a line ranging between Morgan's Point and Graybiel's Point.

From shore,-	Distance	, feet,	
-	60	depth	4 fect,
	" to	90	G
	90 to	150	8 .
-	150 to	240	10
	240 to	300	12
	300 to	420	14
	420 to	900	19
	900 to	1200	24
	half a m	ile out	43

From Morgan's Point, 900 feet south, there is 10 feet water. From Greybiel's Point, south 50 degrees west, 180 feet, 18 feet water. In the same direction 1200 feet from the Point, 24 feet water, half a mile off shore, 43 feet water. Sugar Loaf Point, distance from shore 600 feet, 10 feet water.

The bottom of this Bay is clay, the shore banks are composed of hard soil. The Bay is accessible by vessels in any wind except from the north going in. The ingress and egress are easy, adjacent to the curve of the Bay the Canal is level, and the soil and timber good. The Engineer's Report is annexed.

ROBERT RANDAL.

GEORGE KEEFER, Junior.

Assistant Engineer.

ST. CATHARINES.

February 1st, 1831.

House of Assemby, York, ) 4th March, 1831.

SIR.

I enclose a memorial to His Excellency with reference to the subject matter of my letter of the 5th ult., and as my stay in town will be but for a few days, I trust that you will be able to forward to me His Excellency's answer to the request contained in that letter and this memorial.

I have the honor to remain,

Sir, Your Obedient Humble Servant. ROBERT RANDAL.

To Z. Mudge, Esq., Sec'y to His Excellency the Lt. Governor.

To His Excellency Sir John Colborne, K. C. B., Licutenant Governor of the Promuce of Upper Canada, Major General Commanding His Majesty'. Forces therein, &c. &c. &c.

The Memorial of Robert Randal of Chippawa, in

the District of Niagara, Esquire,

HUMBLY SHEWETH,
That in the last session of last Parliament the House of Assembly passed a bill to grant a further loan to the Welland Canal Company, after your memorialist should have examined and reported to Your Excellency the Condition of the Deep Cut: the said Bill further imposed upon your Memorialist the important and laborious trust offully examining into and reporting to Your Excellency upon the condition of the said Canal, and every matter and thing therewith connected, and of obtaining all such facts and information as might enable the Legislature to form a "correct opinion of its progress, condition and future usefulness." The Legislative Council were pleased to concur in opinion with the House of Assembly in regard to the fitness of your memorialist to undertake this extensive and important trust, and that Honorable body most readily concurred in the appointment and agreed to the provisions of the bill. Your Excellency on the 6th March last was also pleased to signify your entire approbation of the appointment of your memorialist, as Welland Canal Commissioner, and by giving the Royal assent to the Statute Chapter 11, passed last session, graciously assumed the duty of remunerating your memorialist for his services and for the disbursements he might have to make in discharge of the very important duties of the said Commission.

Fully relying upon the faith of the Legislature as pledged to your memorialist by a solemn act of Parliament, and being aware that by the 14th section. Your Excellency had cheerfully undertaken to afford your memorialist that fair and reasonable recompense for his services, which it was the desire of Parliament he should receive. Your memorialist entered last spring upon the discharge of the duties of the office of Canal Commissioner, and was urged to hasten his first report by a notification that Your Excellency would make no order for money in favor of the Company until your memorialist had reported agreeably to law. Your memorialist understood from Your Excellency that the first report made by your memorialist was very satisfactory, and that report as well as the report made during the present year, having been by Your Excellency communicated to the House of Assembly, have been printed by special order of the House and, as your memorialist has ascertained, has given much satisfaction.

That on the 5th F. bruary last, your memorialist addressed a letter to Mr. Mudge, requesting that officer to call the attention of your Excellency to the consideration of your memorialist's services as commissioner (then terminated) in order that Your Excellency might direct such remuneration to be made to your memorialist, as the labor and great responsibility which has devolved upon your memorialist, might, in the opinion of Your Excellency be just and right. That to this letter your memorialist has received no reply although a month has clapsed from its date. May it therefore please Your Excellency to cause a reasonable remuneration to be made to your memorialist for his services as canal commissioner, agreeably to the provisions of the 14th section of the canal act.

And your Memorialist as in duty bound will ever pray,

ROBERT RANDAL.

No. 6. REPORT

OF

JOHN B. YATES, Esquire,

To the President and Directors of the Welland Canal Company.

In compliance with the request of the Directors I visited England for the purpose of disposing of the remainder of the stock of the Welland Canal Company, or to borrow from His Majesty's Government or individuals the sum of £25,000, at an annual interest of five per cent, in order to enable the Directors to complete the Canal, and further to make an effort by means of the explanation I was enabled and authorised by the Board of Directors to give, to induce His Majesty's Government to fulfil their engrement in 1826, to pay one-uinth of the cost of the Canal, in consideration of which, Government stores should be permitted to pass through the Canal without payment of any toll or duty to the Company.

On my arrival in London I called immediately at the Colonial office in Downing-street; and presented the Despatch of the Governor, containing the application of the Company and the Representation of the Commons' House of Assembly of the Province, and

was requested to call again the following week and make such additional representation as I was desirous or instructed to make in writing. I called accordingly, and left a communication to Sir George Murray, of which the paper marked A. is a copy.

I though from the manner in which the business was conducted, that there was no prospect of obtaining money from the Government, and therefore confined myself to the request that the one-ninth should be credited on the amount borrowed by the Company from the Government—I was then informed that I should be made acquainted with the decision of the Lords Commissioners of the Treasury whenever it should be communicated to the department.

It now became necessary in the accomplishment of my object to turn my attention to the disposition of the stock on hand or borrow the money. The attempt to borrow the money was first made, but I was met in this by an insuperable objection—the prior. lien on the property of the Company by the Govern ment for their debt of £50,000 sterling, and the debt ot the province of £50,000 currency. It therefore was necessary to rely on the disposition of stock solely, not having any power to enter into a negotiation for a loan sufficient to remove the lien of the Government. With the aid of the letters of introduction I took with me from New York, a subscription of 470 shares of stock was procured from the individual members of the house of Fletcher Alexander & Co., London, with power to draw for the money immediately, but two several negotiations at different times for the whole balance of stock I verbally closed were broken off in consequence of the unfavorable opinion decidedly expressed by the partners in a highly respectable commercial house in the Canada trade who for some cause have taken a stand against the Canal Company.

After this when I perceived that no hope could be entertained of aid from any of the former sources, my attention was thrown into small individual efforts, and in this I was much assisted by a friend with whom I had become acquainted, and in whose name a pamphlet was issued, explaining the object, progress, prospect, and state of the Canal, as far as the materials then in my possession would enable such information to be given.

By this means and the aid of Captain Creighton some additional subscriptions were procured, an account of which has been given by the ag. s in London. Of this the amount now in the hands of the agents for which the Directors are authorised to draw or have drawn—858 shares at £11.5s., sterling, £9652 10s. The amount of the subscription of Major Taylor, named by the agents as unpaid, was subsequently paid to them before I left England, of which they advised me by letter, and the house of Thomas Wilson & Co., have subscribed 50 shares in addition to their former subscription, for which they have either paid the agents or will pay when the agents shall be drawn upon for it—this subscription has been accidentally omitted in the agent's account.

There are also 50 shares more for which the Rev. Mr. Blacou, has subscribed; which have no doubt been paid for, through Mr. Dawson of Liverpool, before this time—the 100 shares put down as subscribed by Captain Creighton, are to be paid for in New York, and will be attended to on his return K.5

this fall—there is then an explanation to be given of the 100 shares of Mr. Ellice only.

When I saw Mr. Ellice he mentioned that he considered the delay of the Company in not immediately answering the terms of his former conditional arrangement with Mr. Merritt to have released him from all honorary and legal obligation to comply with them, and the person who was to have united in the engagement had utterly refused when they heard of the accident two years ago at the Drep Cut, considering the whole project, according to the representations then made, to have wholly failed; such was still the prevailing opinion, and nothing but an actual use of the canal would ensure confi-I called upon him afterwards for his subscription for 100 shares—his answer was that he did not want the dividends payable in England, he would rather receive them in Canada, and asked me whether I wished it paid in England or Canada—My answer was that it was wholly immaterial, the money was wanted in Canada, and if paid there would save drawing for it. He then told me he would order it paid there immediately, which I supposed had been done, no condition or qualification having been suggested to me, for if it had been I would have rejected the subscription as dishonorable to the other subscribers who had taken their stock without condition-I have been thus particular with this account of the transaction because I have been informed that some improper and subsequent condition has been appended to the payment in consequence of which it has been procrastinated. If these 100 are then considered as subscribed there will be 1108 shares to be deducted from 1667, leaving 559 shares :- those were left with Daniel Bell and Son, Stockbroker, London: but it is not probable any more will be sold until information has reached them of the state of the canal.

After being there so long a time without hearing any direct information of the state and progress of the canal, and the unfavorable account that reached us through the Montreal papers, my situation became exceedingly embarrassing in the disposition of stock. A species of personal responsibility was obliged to be assumed in the representation that no object of this sort ought ever to require, and which never fails to impair confidence in, if it does not injure the character of the person making it.

I therefore determined on abandoning any further effort at that time, and urge the Department for an answer to the application for the remission of the debt to the extent of one ninth of the cost of the Canal preparatory to my return. For which purpose I wrote a Note to Mr. Hay and received his answer marked B,—afterwards the official communication was sent, a copy of which furnished from the books of the Colonial Office, marked C, accompanies this, containing the information that the Government would abandon the right to pass Government stores without payment of toll or duty to the Company. I communicated my design to some of the principal Stockholders to return, and propose to the Board to give me power to negotiate a Loan sufficient to pay off all our debts and complete all the objects of the Company, so that any one debt due from the Company should not have precedence over another.—The plan was approved by all to whom I named it decidedly, and they suggested that it should be at-

plenty, and any offer of good security would insure good terms. There is another subject connected with the authority to negotiate a Loan. It has now become evident that in order to overcome all difficulty and render the Canal useful and the Stock profitable, three objects must be accomplished by the Company—a speedy settlement of the lands along the Canal, occupation of the Notation to Forwarding busines—adividual effort alone will effect the two first advantageously; but the business of forwarding, and preparation for it, which is of primary importance and in consequence of the power and privileges of the Company and opposition of capitalists elsewhere, must be started and attended to by them. It is therefore necessary that in the arrangements for any loan provision should be made for means to accomplish this object.

There are two forms in which this may be effected either by a reliance on the responsibility of the Company solely, or soliciting the Government of the Province to guarantee such engagements as the Company may make, for money, pledging the Canal and tolls to the province as their security. The probability is that the money can be procured without guarantee, but it will make a difference of perhaps one per cent annually in interest with us, and as the province is a partner with us, it is as important to them as to us that the money should be procured at the lowest rate of interest, if they are gale in lending their responsibility, which a lien upon the Canal will make them. Such responsibilities have been frequent for objects of public interest.

The province of Nova Scotia has guaranteed to the Stockholders of the Shubenacada Canal five per cent. per annum for ten years. The State of Pennsylvania has guaranteed to the Stockholders of the Union Canal Company, six per cent per annum for twenty years. The State of New York has loaned the credit of the State to the Hudson and Delaware Canal for \$70,000 dollars for 25 years, the Canal Company providing for and paying the interest on the loan. The State of Louisiana has loaned the credit of the State to a large Agricultural Association for 1,000,000 dollars, the Company providing for the payment of the interest annually. Indeed where individual capital has been hazarded in public improvements, it is not at all improbable that Government will aid in sustaining the improvement to the extent necessary, especially when there is a certainty of its proving beneficial.

I have since my arrival here been over the whole line of the Canal;—the workappears well done, and the dam at the Grand River is now an excellent work. It has cost more money than was originally contemplated, but it is now a permanent and substantial dam, and in my opinion the additional expenditure was necessary to render it safe.

There is a large amount of money still requisite to be expended to finish off the work and make the canal to Lake Erie. This ought to be undertaken as soon as means can be procured to accomplish it, but it should by no means be engaged in unless the funds are in hand. The Board as well as the original stockholders, have had embarrassments sufficient arising from contracts made on the strength of anticipating funds for the procuring of which no positive and certain provision had been made: If

no further loan is made, the funds which may now be realised had better be employed in preparation for an active use of the Canal as it now is, and dressing and smoothing the banks, than be expended in commencing a continuation or extension of the Canal, necessary indeed to derive full advantage from it, but which the funds are not adequate to accomplish.

I have ventured to offer an opinion on this subject, which is submitted to the Board with the utmost deference.

J. B. YATES.

No. 7.

LETTER OF JOHN B. YATES, Esq.,

TO THE

RIGHT HON'BLE SIR GEORGE MURRAY, AND ANSWER THERETO.

54, Regent Street, May 31st, 1830.

Sir,

I have the honor to submit for your consideration a statement of some facts connected with the application of the Welland Canal Company and the address of the House of Assembly of Upper Canada for one ninth of the cost of the Canal.

With the importance of the Welland Canal in its probable prospective commercial effect upon the interests of the country, you are fully acquainted. To this however I will take the liberty more particularly to refer when examining the subject of the petition of the Company in relation to the duties on produce.

It may appear singular that an application should now be made on the part of the Company for this sum, when the alternative was offered to their agent William Hamilton Merritt, Esq., either to accept the sum of £27,000 for the one-ninth promised to be advanced by his Majesty's Government on a loan of £50,000 and that the Canal should be mortgaged for its repayment. But in explanation I beg leave to say, that an unpleasant duty was thus presented to Mr. Merritt from which he could not escape. The unexpected difficulties in the prosecution of the work, had increased the expense, far beyond the original estimate and the £27,000 would not have been sufficient to place the Canal in such a state as to be beyond the danger of entire failure. It will also be borne in mind that the project, from a cause altogether inexplicable had many and virulent opponents, every possible effert was made to disparage the value of the stock in the estimation of capital-There was no good reason to expect farther aid from individuals in the then state of the work. Mr. Merritt therefore felt himself bound to accept the other alternative of £50,000 loan. There is another consideration which may have occurred to him, and appears to afford reasonable ground for his decision. That as the sum required and about to be advanced was much more than was ever contemplated by the Government and the promise of even the one-minth had been made on the condition that the work should be completed previous to the payment, it was not only perfectly proper but necessary for the security of the Government that all the property of the Company should be pledged for the whole debt; for without having received the loan, before the Company could have consistently asked for the payment of the promised one-ninth in advance they ought and probably would have been required to give security that the work should be completed within a reasonable time. It was therefore more easy and a less complex transaction, if even it was probable that the one-ninth would be allowed by Government, when the work should be finished, to place the whole in the shape of a Loan; more especially as the cost of the Canal, so as to determine the exact amount of the one-ninth was not yet known.

If this view of the subject be correct it follows that the evpectation might well have been entertained by Mr. Merritt, that the condition of the loan would be so far favorably modified, as to credit the originally contemplated grant, (one-ninth of the cost of the canal) on the debt of fifty thousand pounds when it should be completed:—I beg leave further to say, that the whole additional experimentary, has been owing to the effort, on the pa. of the Directors, to make a thorough cut through the mountain ridge to the Welland River. And although that attempt has failed in consequence of the obstacles encountered at the deep cutting last fall, yet it has been highly beneficial by giving a deeper and wider canal through the ridge than would otherwise have been made. The Company have also been embarrassed and delayed, as well as put to much additional expense, by alterations in their plans required by the interference of officers of the Government, especially at the Grand River. Commodore Barrie, the naval Commander on the Lakes, required the Company to remove the dam across that river five miles higher up the stream than the point at which they had commenced constructing it; which obliged the Company to make some miles additional canal not before designed. I do not intend to convey any censure by this reference to Commodore Barrie's interference; it was done in the performance of duty, and although the Company could not acquiesce in the soundness of the reasons for it, yet they felt themselves bound to submit to the order.

The Company have now overcome all difficulties! so far as to have the navigation opened; and they trust in consequence of the great additional expense to which they have been subjected and the importance of the communication as a commanding channel for commercial intercourse the one-ninth of the cost of the Canal, will be credited upon the amount of debt they owe to His Majesty's government. From the report of last winter mede by the Directors it appears that the sum of £272,795. Canada currency, had been expended, and that the amount required fully to complete the canal would make the. whole expenditure above £300,000, Canada currency. The one-ninth of this sum is about £30,000 sterling, while if credited would leave the Company indebted £20,000 sterling. The amount to the government is of no great moment, but to the persons interested in the stock of the Company it is of much importance, and the transportation of Government stores without examination or imposition of Toll on the part of a private company may in the course of time become an object of some consequence; I trust

I shall be permitted to say in closing my remarks on this part of the application in justice to the great attention and preserving efforts of the indefatigable Agent of the Company, Mr. Merritt, and the highly respectable gentlemen composing the Board of Directors by whom he has been uniformly sustained in his exertions, that a communication of such magnitude and importance to the country and perhaps it is not too much to say, the whole empire in a commercial view never has been accomplished at so small an expense and under such discouraging circumstances arising not from any faults in the management, but from causes entirely beyond the control of the Directors.

The greatest portion of the stock held by individuals is owned by very few persons, who have persisted in sustaining the work, notwithstanding the discouraging occurrences. Those stockholders saw in the despatch of Lord Bethurst, received in Canada in the winter of 1827, during the session of the Colonial Parliament, a very encouraging evidence, that the Government felt an interest in the successful progress of the work, and were induced to engage more largely in it in consequence of that conviction. The Directors have therefore in behalf of such Stockholders solicited that this promised loan may not be withheld.

The other branch of the application rests on a different foundation. An alteration in the rate of duties is a measure of policy, and I have great hesitation in making any suggestions on that subject. There are however considerations of a local nature which it may be useful to name.

The outlet which the Welland Canal will open to the productions of the United States, as well as the Province of Upper Canada, will be highly beneficial to the interests of both countries. That portion of the great New-York Canal lying between the junction with it of a canal now completed and in use from Oswego on Lake Ontario, and the western termination of the great canal at Buffalo on Lake Erie will be avoided by the Welland Canal, and the expense of a distance of 130 miles canal navigation saved in approach even to the New York market.

The advantage derived from the alteration in duties and making Port Dalhousie a free ware-housing port, for which the Company have petitioned, will enable American vessels to carry mixed cargoes of articles, that may be landed in part or whole and such as are intended for an American port and market continue to the destined Port. The canal will not only be aided by this measure, but additional employment will be given to the vessels on the Canada side.—Thus a cargo of wheat and tobaccomay be taken by an American vessel from Ohio, and the wheat a permitted article, be left to be manufactured into flour at the mills on the Welland Canal or transhipped to Montreal by Canadian vessels, and the tobacco, an article on which the duty is so high as to amount to a prohibition will be taken to a Port on the American side of Lake Ontario.

It is an important fact to induce this measure, that the facility afforded by the Welland Canal will be so great, that such produce of the country on the upper lakes, as shall be landed at Buffalo may be taken thence in boats through the Welland Canal by way of the Niagara and Welland Rivers and re-

shipped at any place on the canal or Port Dalhousie to Oswego and thence to New York at less expense than through the Eric Canal. As the law now is, every American Vessel with such mixed cargo, a part destined for New York and a part for Montreal or Quebec will be compelled to land that part of her cargo intended for New York, at Buffalo to be sent by the Eric Canal.

If this provision should be adopted it would hold out an inducement to land the Montreal part of the cargo at Port Dalhousie, and proceed with the re-mainder to Oswego for New York, thus giving the Canal the advantage of the whole lading, giving theowner a choice of markets at the cheapest rates, affording additional employment for Canadian vessels, and in no way injuring the revenue. If, therefore, it shall be deemed expedient to recommend the enactment of a law relative to duties pursuant to the proper to add a clause.—That from the peculiar local situation of the Welland Canal, it is expedient to admit the landing and the warehousing of any produce or property, or any part of a cargo, from on board any American vessel or boat from any American port on Lake Eric, or above it; and that it may be lawful for the property so landed and warehoused to be reshipped on board of any American or British vessel, and conveyed for the port for which it was originally intended in the same manner, as if it had not been landed,—such a provision is highly important to the Company, and would not impair any interest in Canada.

The peculiar and commanding situation of the Welland Canal is such that I cannot forbear one general remark as particularly applicable to the two commercial channels through the St. Lawrence and Hudson Rivers; every measure of restriction on either side of the boundary, bearing on the commercial intercourse through the respective Canals, must be injurious to the country adopting it, and will aid no one employment, but must injure it. Thus, if no one employment, but must injure it. Thus, if the State of New York should, in order to preserve the revenue from its Canal, impose an additional toll on the junction Canal terminating at Oswego, and thus attempt to force transportation through the whole of the Erie Canal, every cent of added toll would operate as a bounty in favour of the Canada trade; and not only would the toll on its whole Canal be lost to them by such a measure, on the production of the region of country bordering on the Upper Lakes, which can be sent to either market, but, what is of much greater consequence, its inhabitants would be deprived of the advantage arising from the employment it would require, and its com-mercial interests much injured. The same reasoning will apply in favour of a repeal of restrictions now existing in Canada.

I have the honor to be,

Sir.

Your obt. humble servant,

J. B. YATES.

The Right Hon. Sir GEO. MURRAY,

&c. &c. &c.

Answer to the above Letter, by the Right Hon. R. W. Hay.

Downing Street, July 2, 1830.

Sir, I have laid before Secretary Sir George Murray your letter of the 1st instant, requesting information as to the intention of His Majesty's Government with respect to the debt due by the Welland Canal Company; and I am directed to acquaint you that the subject has been brought under the consideration of the Lords Commissioners of the Treasury, and I will not fail to communicate the result to you as soon as their Lordships' decision is made known to this Department.

I am,

Sir,

Your most obt. servant,

R. W. HAY.

J. B. YATES, Esq.,

Cheltenham.

### IN THE YEAR 1831.

It became evident that the tardy and circuitous route by the Niagara River would not realise the expectation of the stockholders, consequently various routes to Lake Eric were explored, as will be seen by reference to the Reports of Marshall Lewis and Messrs. Yates & Warren-[Nos. 1 and 2.] An application was made to the Legislature, and a further loan of £50,000 granted, for the purpose of making the route to Lake Eric-see Act passed 6th March, 1831-[appended hereto, marked No. 3.] Contracts were entered into and the work commenced this summer. The Minutes of this year [hereto appended, marked No. 4] and the Report of the Directors [appended, marked No. 5] gives a full detail of the proceedings.

Documents referred to in the foregoing remarks. Report of Marshall Lewis to the President of the Welland Canal Company ..... marked No. 1 Report of Messrs. Yates & Warren. marked No. 2

### REPORT

## MARSHALL LEWIS, Esquire.

To the President of the Welland Canal Company.

SIR,

Having been requested by Wm. Hamilton Merritt, Esq., to write you my opinion respecting the best place for a harbour on Lake Eric, I beg to say, that I have recently had an opportunity of examining the mouth of the Grand River for that purpose; it is, no doubt, the most natural and best place for a harbour; and can have the channel secured across the bar with less expense than has formerly been anticipated, or estimated by others.

The project of the two harbours strikes me to be the best; it embraces the two great objects in view -the Grand River route for early navigation, by trans-shipping and boating-and Gravelly Bay for the schooner navigation, with the shortest towing that can be found between the lakes; and if harbors are of use to those sailing the lake, two will be better than one, and can be made at less expense than making the schooner navigation to the mouth of the river, which will cause the Canal to be useless for one season; but on the other plan, it can be done this summer and next winter, without interfering with or stopping the boating in the least.

Taking all things into consideration, I am led to believe that the plan of constructing both harbours is, by a great majority, the best that can be adopted.

Respectfully, yours, &c. &c.

## MARSHALL LEWIS.

St. Catharines, May 23, 1831.

P. S .- The inexhaustible quarries of the best kind of grey lime stone (in that neighbourhood) for locks or any other buildings where cut stone is required should not pass unnoticed.

No. 2.

### REPORT

## J. B. YATES AND JOHN WARREN, Esqs.

The Board of Directors of the Welland Canal Company having requested us to examine Gravelly Buy, and report the result of our observations relative to its advantages as a harbour for one point of termination for the Canal on Lake Erie-we present to the Board the result of such observations as we have been enabled to make.

The Engineer's Report of the soundings and depth of water, with the relative situation and bearing of the reefs of sunken rocks, appeared to us to have been made on accurate examination.

In its present natural state, there is sufficient evidence of the cause of terror the mariners on the lake must have had for this bay, without any buoys or marks to indicate the particular situation of the rocks; but this very cause of fear to mariners forms one of the strongest reasons for a decision in favour of this bay as a harbour.

The two reefs of rocks converge so far only as to leave a convenient space between their terminations for the safe passage of vessels in any gale on the lake; and the water is deep enough, until near the shore, to float all lake vessels. By raising piers on those reefs of rocks, a perfect shelter may be formed for vessels, and the entrance into the Canal completely protected. The bottom appears to be of clay, affording excellent anchorage; and the amount of expense to make a perfect harbour will certainly be far less than could possibly be anticipated, without a knowledge of the particular situation of the pears unobstructed and safe; we examined as far out as 22 feet water.

There are some important considerations which have been forcibly presented to our minds, after having satisfactorily ascertained that this can be made an excellent and safe harbour without much expense. The opening of the Canal, this year, has been prosperous—evidence has been given, that it will be generally used, and that in no event can its advantages, as a public work, be questioned. It would, therefore, be improvident, and, perhaps, might be deemed highly improper, without an evident necessity, to deprive the public of the advantages, and the Stockholders of the profits of the Canal for two years, when, by the selection of one point of termination that necessity would not exist, and in selecting any other it must be unavoidable.

It will also be recollected, that the particular care taken by the Legislative enactment to limit the amount of expenditure, so as to require even private security that it should not exceed a certain sum, also particularly demands, on the part of the Board, direct attention to the amount of relative expenditure.

The Legislature has, as it were, directed them to accomplish their object of reaching some eligible point or bay on Lake Erie, at the least possible expense. This we would not deem conclusive, if the excellence of the harbour was at all doubtful; but as it is not so, we think the consideration important.

The harbour at the mouth of Grand River can be improved, and the cut to and harbor at Gravelly Bay made, for about £10,000 less than the Canal can be increased in size and the harbour at Grand River made, besides the two years loss of navigation. It is, therefore, our opinion, that the Canal at Gravelly Bay ought to be made, in preference to any other on Lake Erie.

We saw most of the inhabitants who own the property on the line of the Canal to Gravelly Bay, and procured from them written stipulations to convey the necessary land, on such terms as we thought reasonable.

J. B. YATES.
J. WARREN.

St. Cathariues, June 1, 1831. No. 3.

## ACT OF PARLIAMENT,

1st Will. IV., CHAP. 18.

An Act to afford further aid to the Welland Canal Company, and to repeal part of and amend the laws now in force relating to the said Company.

[Passed March 16th, 1831.]

Whereas the Welland Canal Company are desirous of raising by loan the sum of £50,000 of lawful money of this Province, to complete the said Canal from the River Welland, to Lake Erie; and whereas it is expedient to afford public aid in furtherance of the said undertaking, upon security of the said Canal Company, as hereinafter mentioned; be it therefore enacted, Se. Se., That whenever the said Wel land Canal Company shall have executed a bond, under form of law, conditioned for the punctual payment of the interest and principal of such debentures as shall by this act he issued for their benefit; and shall also have executed a mortgage upon the Canal and the tolls thereon, as collateral security for the payment of the said condition, then it shall and may be lawful for the Governor, Lieutenant Governor or person administering the Government of this Province, to authorise and direct His Majesty's Receiver General of this Province, to give and deliver to the Directors of the said Company the debentures of this Province, to the amount of £50,000, in sums not less than £200 each, as may be required by the said Directors, payable to the order of the said Company at the expiration of 25 years from the passing of this act, with interest at the rate of 5 per cent per annum -payable half yearly in the city of London, at such place as shall from time to time be named by the President of the said Company for the time being, and published in two newspapers of said city at least three months before such interest shall become due, and whenever any change in the place of payment shall be made, such notice shall again be given in the same manner: provided also, that no part of the said sum of £50,000 shall be expended by the said Welland Canal Company in building boats or vessels, erecting warehouses, or in any other manner than in completing of the said Canal, and the towing paths, locks, and harbors appertaining thereto.

- 2. And be it, &c., That all such debentures as are hereby authorised to be issued, and the interest thereon, shall be, and are hereby charged and chargeable upon, and shall be repaid and borne out of the monies that shall come into the lands of the Receiver General, to and for the public uses of this Province, and at the disposal of the Legislature thereof.
- 3. And be it, &c., That it shall be the duty of the Directors in the appropriation of their toils, to make provision for the payment of the interest of the aforesaid debentures, pursuant to their tenor, sufficient for one year in advance, and to have that sum always at their command before any dividend of profits to the Stockholders shall be declared; and further, in their annual Report to the Parliament, they shall particularly name the place and manner in which the same is deposited or invested.
- 4. And he it, &c., That all such debentures with the interest thereon, and all charges incident to or at-

tending the same, shall be and are hereby charged and chargeable upon the fund provided by the securities given for the repayment thereof, by the said Welland Canal Company; and if at any time, satisfactory provision shall not have been made, in the manner named in the preceding clause, for the payment of the interest and the principal when due, it shall then be lawful for His Majesty's Receiver General of this province for the time being, and he is hereby required, in the name and on the behalf of His Majesty, to take possession of the said Canal, and appoint such agents, collectors, and other officers, as may be requisite to manage the same, and deposit and apply the proceeds thereof to the payment of the interest and principal aforesaid; Provided always, that no part of the said sum of £50,000 shall be advanced to the said Cempany, until personal security shall have been given to the satisfaction of His Excellency the Lieutenant Governor, to the amount of £25,000, that the said Canal shall be completed for ship navigation from the said River Wellund to some point in Lake Erie to be fixed upon by the Directors of the said Company for a harbor and that the said harbor shall likewise be completed without any further grant for that purpose; and that the said Company snall bear harmless, and keep indemnified the government of this province of from and against, the payment of one half of the said sum of £50,000; and the interest from time to time growing due thereon.

- 5. And be it, &c., That the President and Directors of the Welland Canal Company shall be permitted to occupy such portion of the Grand River, and the Land adjoining the same, from the upper part of the dam erected by the said Company across the same, and thence to the mouth of the said river, as may be necessary for a towing path, warehouses and other buildings or erections, and to improve the navigation thereof by the use of dredging machines and otherwise; and that the said Company shall have the privilege to extend their Canal for ship navigation to the said grand river, and to any other Bay or Harbor on Lake Erie to the Eastward from the mouth of the said River, and occupy the same as aforesaid, as they may think the public convenience and the interest of the said Company may require.
- 6. And be it, &c., That the 11th clause of the act to grant a further loan to the Welland Canal Company, and to regulate the further operations, passed in the 2nd session of the 10th parliament, by which the said Company are restricted from extending said Canal to Lake Esie, without further Legis lative provision for that purpose, and the 15th and 16th clauses of the Act passed in the 6th year of his late Majesty's Reign, entitled "An Act to repeal part of and to extend the provisions of an act passed in the 4th year of his present Majesty's reign, entitled, An Act to incorporate certain persons therein named, under the style and title of the Welland Canal Company," be and the same are hereby repealed.
- 7. And be it, &c., That John Warren Esquire, Samuel Street, Esquire, and David Thorburn, Esquire, shall be arbitrators to settle and award the damages sustained by individuals whose property has been injured by the operations of the Company, and whose property shall have been or may hereafter be, taken by the Company, and with

whom the Company have not agreed and cannot agree, and whose claims have not been adjusted under former laws; whose decision shall be final between the parties; and the said arbitrators shall be allowed for every day of their attendance to the duties of such arbitration the sum of 20s-

S. And he it &c., That the said Arbitrators shall be sworn before some one of His Majesty's Justices of the Peace, well and truly to hear and determine all matters submitted to them, and a true judgement

to give according to the evidence.

- 9. And be it &c., That the said Arbitrators shall have full power and authority to summon all witnesses that may be required by any of the parties to appear before them, and to swear the said witnesses to testify the truth, the whole truth and nothing but the truth, respecting the matters to which they shall be interrogated, and that they shall be allowed a sum not exceeding 5s. per diem, according to the discretion of the said Arbitrators, and that such remuneration shall be paid by the party requiring their attendance.
- 10. And be it &c. That a true, full and particular account in detail of the expenditure of all monies raised by the Welland Canal Company, from the debentures hereinbefore mentioned, be laid before the Legislative Council and House of Assembly by the President, Directors and Company of the Welland Canal Company, which account shall be veified by the oath of the President and Secretary of said Company, made before a Judge of the Ling's Bench or of any District Court in this Province, stating that the said account is a just and true account of the expenditures of the said monies.

# MINUTES OF THE BOARD,

For 1831.

March 10th, 1831.

Atameeting of the Directors, held at York, this day.

The Hon. John H. Dunn, President,
The Hon. William Allan,
Henry J. Boulton,
Robert Randal, and
Wm. Hamilton Merritt, Esqrs.

The Board being desirous of carrying into effect the intention of the Legislature without delay, and being fully aware of the necessity of having both routes into Lake Erie explored and laid out before the breaking up of the ice—

Resolved, That the Agent give immediate notice

after the passing of the Bill,

That proposals will be received at the Welland Canal Office at St. Catharines, on Thursday the 20th day of April, for enlarging the Canal from the Deep Cut to Hellens, about 4½ miles—thence to about the centre of the large Cranberry marsh, 12 miles—thence to Lake Erie, about 1½ miles, an entire cut into the Lake, and for the completion of the Harbor.

After receiving proposals for both routes the Directors will determine on the one they intend to adopt, and enter into Contracts accordingly, in the mean time the Engineers must be directed to lay out the route and furnish specifications and plans for the same.

By the present law the appropriation of £25,000 is limited to finishing the Canal and making the cut into Lake Erie, consequently the Directors have it not in their power to pay the debts due for the land and other damages due, for the purposes of the Canal-the interest on the Government debt or for any other purposes necessary for the successful operations of the Company.

Resolved, Therefore, that William Berczy, Esq. be requested to proceed to Lower Canada without delay, for the purpose of making an application for such aid as the Legislature may be disposed to loan, and that the Agent be directed to make out a petition for the signature of the President.

Resolved, That a letter be written to Mr. Yates enclosing a copy of the law of this Province authorising the Government to issue debentures for the sum of £50,000, payable in 25 years, with interest at 5 per cent, payable half yearly in London, together with such other documents as may be necessary, to enable him to ascertain upon what terms the said debentures may be negotiated.

Resolved, That a Board of Directors be summoned to meet on the first Thursday in April, and that the members be notified accordingly.

Resolved, That an application be made to the Bank of Upper Canada to prolong the payment of the drafts on Messrs. Yates & McIntyre for six months.

The undermentioned rates of toll between Grand River and Port Dalhousie were ordered to be published—viv:

Resolved, That the plan for extending the Harbor at Port Dalhousie by removing the Lock be approved and notice of the same published to receive proposals on 1st day of June.

Third-Resolved, That a berm bank and Culvert is necessary to drain the land from Broad Creek to Grand River, and also at Hellen's Creek, and that proposals be received for the same the 1st day of June.

Fourth-Decision of the route.-It appearing from the last Act of the Legislature that the termination of the ship Canal to Lake Erie was left to the decision of the Directors-accordingly on the 29th and 30th of April, and 1st of May, the Directors traversed the entire line of the Canal to Dunnyille, Grand River Dam, mouth of Grand River, Boulton's, Graybiel's, and Gravelly Bays, and on this day, the 2nd of May, after minutely examining the plans and estimates of the Engineers, and Marshall Lewis, who was employed to explore the different sites, found that to extend the navigation from the Deep Cut would cost as follows:

To Gravelly Bay, a distance of 12 miles.....£27,329 To Graybiel's Bay, a distance of 13 miles.... To Boulton's Bay, a distance of 18 miles.... 33,694 5 11 To Grand River, a distance of 30

miles..... 40,267 4 when from the saving expense as well as distance, the erection of an additional Harbor on Lake Erie, and the connexion of the Lakes by the least possible distance, the Board decided on the termination being at Gravelly Bay. But as the Grand River is likely to be open about two months earlier in the spring thun this Bay it is deemed advisable to open a Harbor at that place also, particularly as it can be done at a less expense than continuing the ship Canul to that Point, which will enable the owners of property on Lake Erie not only to avail themselves of the earliest possible navigation by a transhipment while the ice remains between the two Harbors, but gives them the best and shortest route between the two Lakes for the remainder of the season.

The President, Messrs. Allan, M'Donell, Randal, and Merritt, were in favour of the above. Mr. Boulton was opposed to it. On which Mr. Boulton proposed the following:-

Resolved,—That it is expedient to make a pier at the mouth of the Grand River, in order to ascertain whether a permanent harbour may not be constructed at that point which is open every year upon an average three weeks earlier than at any of the lower points, and, therefore, the completion of the ship canal is postponed until the harbour at the mouth of the Grand River has been tried; which was negatived. Mr. Boulton being in favour of the motion, and Mr. Allan, who agreed to a postpone-ment of the decision of the route, although he was decidedly of opinion the harbor at Grand River was not to be relied on, and thought it most for the public interest to secure the two harbors, and the shortest route—the other directors decided against the motion.

The President again put the former Resolution for the termination at Gravelly Bay, when Mr. Boulton alone dissented; but it was

Resolved, in order to give Mr. Boulton, or any other Director, more time to investigate the estimates, so as to form a more correct opinion on the subject, that the decision be deferred to Tuesday,

the 17th instant, or which time, if any Director dissents, he must give it in writing, otherwise it is to be and remain in force.

In consequence of which the acceptance of proposals was deferred to Thursday, the 19th instant, until which time they will be received.

Ordered, That John Warren, Esq., be furnished with the above Resolution.

No money having been advanced for some months for the purposes of the Canal, and the Bank of Upper Canada having refused to lend any money on the credit of the Company, the President was requested to endorse a note for the sum of £2000, at 90 days, which he did, and it was sent to the Bank for discount.

May 10th, 1831.

At a Meeting of the Board of Directors, held this day at the Steamboat Hotel, York.

#### PRESENT:

The Hon. John H. Dunn, President. Alex. Y. M'Donell, Vice-President.

Henry J. Boulton, Robert Rundal, John Warren, and Wm. H. Merritt,

Esquires.

A letter from His Excellency Sir John Colborne, inclosing the opinion of the Council, having been read,

Resolved, That the following letter be sent to the Lieutenant-Governor, viz.:—

- "The Board of Directors of the Welland Canal Company have had under consideration the correspondence which your Excellency has submitted to them in relation to the security required by the Act to loan the credit of the Government to the Company for £50,000. The question submitted to them is one of great interest to the Company, and delicacy on the part of the Board.
- "The loan is necessary to complete the Canal as a useful public work, and the evident object of the law was to obtain a reasonable security that the money is sufficient to complete the Canal, and that a sufficiency of income will be received from it to pay the interest and principal of one half the loan. The real estate of Mr. Merritt and Mr. M.Donell, is in the Province, and is continually increasing. It is represented to be worth of itself at present a sum equal to the whole responsibility required, or nearly so. The other person, who has executed the bond, is not a resident in this Province, but has a deep interest in the Canal, and the amount of his stock is more than the amount of security required.
- "This may not be considered by your Excellency as affording any additional security beside the bond of the Company, with the mortgage on the Canal. Mr. Yates is, however, represented to have a large real and personal estate in the State of New York; and the Board cannot but consider the bond sufficient for all purposes of security to accomplish the object of the law.

- "The individual members of the Board have not that pecuniary interest in the Canal to induce them to incur any personal responsibility, but they trust your Excellency will deem the bond as now given sufficient.
- "The Board have investigated the estimates for the different routes of the new cut. There are two under consideration, on which no final decision has yet been had. The mouth of the Grand River and Gravelly Bay. The most expensive of these routes will not exceed £40,000, as presented by the estimates. The £10,000 left is more than sufficient for any possible deficiency in the estimates, in the opinion of the Board.
- "A full Board of Directors have assembled at this place, and they cannot take any further measure in relation to operations on the Canal without the decision of His Excellency. Will you have the goodness to communicate that decision as soon as your convenience will permit."

Resolved, That the Board adjourn till tomorrow at one o'clock, to receive the Governor's answer.

11th MAY, 1831.

At an adjourned meeting of the Board, held this day—

### PRESENT.

The Hon. John Henry Dunn, President.

Alex. Y. McDonell, Esq., Vice-President:

The Hon William Allan, Henry J. Boulton, Robert Randal, John Warren, and W. H. Merritt, Esquires.

The answer of his Excellency having been received, acquainting the Board that the security would be accepted;

Resolved. That the President be authorised to execute a bond for the sum of £50,000 to the Government of this Province in pursuance of the actof the Legislature.

Resolved. That the Receiver General of the Province be requested to execute the debenture of the Province to the amount of £10,000 in sums of £250 each, pursuant to the Act.

Resolved, That a power of Attorney be prepared and executed by the President, authorising J. B. Yates, Esq., to negotiate a loan with any person or body corporate for the whole or any part of the loan of £50,000, authorised by the law of the last Session for this Company.

Whereas J. B. Yates, Esq. had authority from the Board on the 10th of March last to ascertain whether a loan could not be negotiated on the debenture of the Government, and on what sum a temporary loan could be effected, and Mr. Mates having negotiated a loan with the Bank of the United States to lendthe Company such sum or sums of money as they may require from time to time for the purposes of the Company, at the rate of 5 per centrer annuin on the bond of the Company, accompanied by an equal M5.

amount of the above Government debentures to be transferred and held as collateral security.

Resolved, That the requisite bond or notes be duly executed from time to time as the money may be wanted under the direction of the Board, and the money to be placed credit to the Company, and drawn under the direction, and by the authority of the Board.

Resolved, That the Debentures when executed, be deposited in the Bank of the United States, at the disposal of the Board.

Resolved, That Messrs. M'Donell, Randal, and Warren, be a Committee of Finance to examine and direct the expenditure of money, and to authorise such sum as may be required to be drawn out of the Bank as well as all expenditures on the Canal.

Whereas public notice having been given that proposals would be received for the purchase of all the real estate and hydraulic privileges belonging to the Welland Canal Company, and no proposal having been received so advantageous as the one made by Mr. Yates, it is therefore

Resolved, That the proposition of Mr. Yates be accepted, and that a contract be executed pursuant to the terms thereof, the interest of which is to commence on the 1st day of January, 1832, with the principal payable in ten years.

Resolved, That John Warren & J. B. Yates, Esqrs. be requested to examine the coast on or about Gravelly Bay, and if any shoals, rocks, or other impediments in approaching the said harbor at that place should exist, that a Report be made to the President, and that the last Resolution of the 3rd May be rescinded, and the acceptance of proposals he deferred to the 1st June, on which day a meeting sliall be held for the purpose of deciding thereon, but if no impediment should appear to exist, the said Resolution of the 3d May shall remain.

June 1st, 1831.

At a meeting of the Stockholders, held at the Welland Canal office, pursuant to advertisement for the election of Directors for the year ensuing-

### PRESENT :

The Hon. John Dunn, The Hon. William Allan, Alex. Y. McDonell, George Keefer, J. B. Yates, Thomas Butler, and W. H. Merritt, Esqrs., &c. &c.

The ballot being closed, the undermentioned gentlemen were duly elected, viz :--

The Hon. John Henry Dunn, The Hon. William Allan, H. J. Boulton, Alex. Y. M'Donell, and Thomas Butler, Esquires. FROM WHOM

The Hon. John Henry Dunn was chosen President, and A. M'Donell Vice-President.

June 2d, 1831:

At a meeting of the Directors held at the Welland Canal Office-

#### PRESENT:

The Hon. John Henry Dunn, President. Alex. McDonell, Vice President, The Hon. William Allan, Thomas Butler, Robert Randal, and John Warren, Esquires.

The minutes were read and confirmed.

The termination of the Canal into Lake Eric was taken into consideration. At the last meeting of the Board held at York, the 11th May, Messrs. Warren & Yates were requested to examine the site for a harbor at Gravelly Bay, it having been reported much difficulty would exist in entering it; those gentlemen, after making due examination submitted their Report :-

1st Resolved, unanimously, That Gravelly Bay be adopted as the most advantageous route for the terminution of the canal into Lake Eric.

2nd, Resolved, That contracts be made for building the harbor at Grand River and Gravelly Bay, and for excavating, &c., the different sections of the Canal ;-the following being the best and cheapest, proposals were accepted as follows :-viz.

Pier at Grand River . . . Lewis, Garrison, & Little.

7, 8, 9, 17, & 18, Monson, H. N. 10, 11.....L. Newlove. 12, 14,.....G. Hexson. .....F. Galbraith. 15, 16, 19, .... Lewis, Garrison & Little.

J. B. Yates having negotiated a temporary loan with the Bank of the United States for the sum of £50,000 and the directors having made arrangements to raise this sum at the rate of 5 per cent., provided dehentures for the whole sum shall be deposited, which arrangement allows the Company their own time to sell them, as well as the opportunity of selecting the best market aided by the influence of the Bank, it is therefore

3rd, Resolved, That His Excellency the Lieutenant Governor he requested by the President to direct the proper officer to issue to the Company the whole amount of dependines, amounting to £50,000, in such amounts as the said Directors shall require, and that the same shall be deposited in the Bank of the United States.

4th. Resolved, That it is expedient the debentures be issued in sums of £250 each.

5th, Resolved, That the proper instrument or instruments be duly executed in behalf of this Board from time to time, pledging such amount of Government debentures as have been or shall be ordered by the Board to be pledged to the Bank of the United States-That the seal of the Company be fixed thereon, and the same signed by the President or Vice President in behalf of the Board.

6th, Resolved, That the note of the Board for ten thousand dollars payable on the 16th of March next, to the order of the Cashier of the Branch Bank of the United States at Buffalo, with interest, at the rate of 5 per cent., per annum, be executed on account of the loan for which debentures have been pledged to the Bank, and that the same he signed by the President or Vice President, and countersigned by the Secretary.

711, Resolved, That from the accumulation of husiness on the Canal it becomes necessary to apportion the various duties of the servants of the Company as follows:-

The Agent, William Hamilton Merritt, Esquire, who is now employed at a salary of £400 per an-Amended | num to carry into effect the orders of the Board from time to time to have the generation al direction of all the officers and servants of the Company, and in case any accident should happen on the line, or any urgent necessity for making repairs be required during the recess of the Board, he be empowered to order it to be done, although no specific order of the Board may exist at the timebut that the same be submitted on the next meeting of the Board for their approval.

Sth, Resolved, That Salmon Fuller he appointed Superintendent of the works on the entire line of the Canal at a salary of ten shillings currency per diem, and that he be responsible to the Agent for the safety of the same (who has power to remove him at pleasure) that he be fully authorised to employ such men us he may select under him, and have power to dismiss any one or more without reference to any other person, and that all reports respecting the works be made to him, who is to be alone responsible for them according to the following instructions :-

In the first place you will take the general direction of all the works on the canal, and be responsible for their being at all times kept in repair—the arrangement herctofore has been as follows, -Mr. Sanderson has charge of the harbor and lock including towing path to the furnace—his instructions is to keep every thing in repair,—to keep out all logs, drift wood, &c. &c. &c., from between the piers as well as the Canal,—to allow no vessel to remain between the piers during the night, or any staves, wood, or any other material, to encumber the passage of the harbor.

Mr., Turner has charge of the Locks from Furnace to the River Welland, waste weirs and all the crections appertaining to the Canal-the locks are let by contract besides this, four men are kept for keeping them and the Canal in repair.

· The most important point to which your attention will at first be called is the upper level, commencing as the Grand River. You will regulate the waste weirs so as to throw one inch of water over the aqueduct, and throw a sufficient supply over a waste weir you will creat Allanville at least 120 feet wide to supply the hydraulic works below; you will leave Johnson in charge at Grand River; his jurisdiction to extend to Cranburry Creek—he will employ as many liands as you may conceive necessary; and no more.—Perry is now employed at Broad Creek to

keep every thing in order from Cranberry to half way to Murshville-Windman at Marshville from Perry to curve near Hellin's waste weir—Buchanan from thence to Quaker read—Thomas Bell from thence to one half of Deep Cut, including the main canal to Chippawa—Campbell from thence to flume at Hall Davis', and thence to Thorold where the regular lock tenders commence.-Those men have agreed to be always on the work with a barrow their duty is to keep towing path and canal always in repair—to watch flumes, waste weirs, &c. &c., and to examine the whole of their charge as often as necessary; if you do not find they keep the canal clear of logs, and keep a man or themselves constantly at work, you will dismiss them and substitute other persons in their places. After you have regulated the upper level, or got the workmen at it; you will proceed with the next level above Mr. Keeter's the embankments are all to he raised one foot higher than the main land, so that if the water escapes it can do no damage; -the waste weirs you will so regulate as to throw the surplus water into the canal, and over the two now built at Hall Davis' and Marlatt's-these examine, and make every one of them on the line secure.

You will make it your business to pass the line frequently-take your time, and examine every part of it-spending most of your time where the work is going on -contract for repairs where practicable, and leave the contracts to be executed by the Secretary -your duty will be the execution of the work only.

W. HAMILTON MERRITT,

Agent IV. C. C.

ST. CATHARINES, June 1st, 1831.

9th. Resolved, That a forwarding Agent be appointed with the following instructions, and that he be alone responsible for that department, and that John Clark, Esq., be appointed to that office at 12s. Gd., per diem, during the navigation of the canal, and as long after as may be necessary to make up the accounts.

Instructions to John Clark, Esq., as per order Board, June 2nd.

You will take charge of the forwarding on the Welland Canal, and attend exclusively to that branch.

In the first place you will receive from Mr. Plack the names of all our Agents on Lake Erie-yon will take a statement of the prices of transportation, and make yourselfacquainted with the nature of our engagements with the different vessels.

Boats are engaged to run daily between Grand River and Port Dalhousie—they are allowed five days to perform the trip, and 17 bushel of outs and 30 lbs. of hay for each span of horses. The Captains are allowed \$ per month and \$7 per month for boarding men, and are allowed to hire their own men

You will open accounts with them and each boat -with each vessel-and draw for amount of each shipment, paying the toll to the Secretary—and the freight to defray the various expenses, of boats &c. &c: You will see horses provided, and attend to furnishing what may be necessary to keep them; up as well as horses for towing vessels for the season, provender, &c. &c.

A monthly return to be made of the transactions to the Canal office—an active correspondence to be kept up both with the forwarders below and the merchants above, answering all letters and giving every information respecting the canal.

You will in the first place have an immediate settlement of all accounts for forwarding up to this time and commence anew under your own direction.

### W. HAMILTON MERRITT,

Agent W. C. C.

10th, Resolved, That a Surveyor be employed to designate and establish the boundary of the Canal throughout, under the direction of Mr. McDonell, who will submit the plans of the same for the sanction of the Board as soon as completed.

11th. Resolved, That a deed of the above lands be made out to Alexander McDonell, Esq., at the request of J. B. Yates, Esq., he not being authorised to hold real estate in this Province, and that a bond and mortgage be made out and executed by Mr. McDonell for payment of the consideration and interest and that Mr. Yates execute the bond with him.

Whereas sundry debts remain due from the Company for the payment of lands and damages on the line of canal, as well as for the erection of storehouses and building of boats necessary for the operations of the Company, and the last act of the Legislature granting a loan of £50,000, having limited the expenditure of that money to the purpose of completing the canal and making the cut for ship navigation into Lake Erie only, it is desirable for the credit and interest of the Company that those claims be paid, and that the Company may have at their disposal a a sufficient sum of money to procure the building of as many vessels as may be necessary for carrying on their operations—Be it therefore

12th. Resolved, That J. B. Yates, Esq, be authorised and empowered to negotiate a loan not exceeding £25,000, payable in 10 years with a semi-annual interest of 6 per cent for the above purposes, and that the bond and mortgage for the lands and hydraulic privileges be given as a collateral security for the same.

13th. Resolved, That as it is important to establish a regular communication between the two lakes, the Steamer Peacock be employed to run for the remainder of the season at the sum of \$2000 if it cannot be procured for less—to run in connexion with the Chief Justice and Albion packet boats, so as to connect Fort Erie as well as Dunville, daily, with Lake Ontario—and that it be the duty of the forwarding agent to see that she is regularly supplied with fuel, &c. &c. &c.

14th. Resolved, That James Cummings, Esq., be paid £150 for his damages at Chippawa Cut, on his giving a deed for the land as proffered by him to Mr. Merritt, in August last.

15th. Resolved, That the grant of lease to Messrs. Merritt and Donaldson, for a dry dock, be confirmed.

16th. Resolved, That the drafts unpaid on Messrs: Yates & McIntyre be paid.—The President agreed

to make the necessary arrangement with the Rank for retiring them to the amount of £1750.

17th. Resolved, That in consequence of the hazard to which the books, papers, and property of the Company are exposed to in the present office, that plans and estimates be prepared for erecting a brick building for the better securing them, and for the general purposes of the Company, to be submitted to the Board as soon as possible

18th. Resolved, That Augustus Jones be paid for the stone taken from his premises as per estimate of Engineer.

Mr. George Smith submitted a charge to the Board of \$2½ per day (and allowance for a clerk) for collecting toll at Port Dalhousie and attending to the forwarding business at that place.

19th. Resolved, That Mr. George Smith be allowed \$2 per day during the navigation of the canal, and that no allowance be made for a clerk.

The Secretary was informed that the Canal was now so near its completion, the Board would not require his services for any length of time.

20th June, 1831.

At a meeting of the Directors, held at St. Cutharines this day,

PRESENT:

Alexander McDonell, Esq., Vice President, Thomas Butler, and Robert Randal, Esquires.

The minutes of last meeting were read and confirmed.

1st. Resolved, That the President or Vice President draw for the amount of the tolls and freight accounts deposited in the Bank to be appropriated to the payment of scows, storehouses, and other purposes of the Canal.

2nd. Resolved, That the several sums due for building storehouses, boats, and the outfit for forwarding, be paid out of the funds now in hand, a separate account of which will be rendered to the next meeting of the Board, so as not to be chargeable to the sum now appropriated by the Legislature.

3rd. Resolved, That the agent be instructed to visit the different ports on Lake Erie to ascertain the quantity of wheat and other produce likely to pass through this season, and after ascertaining the time the Steamer Peacock will be got off to change the route to Grand River and the British side of Lake Erie—if he conceives it will be for the interest of the Company to do so.

At the last meeting of the Board it was determined to employ a surveyor to designate and establish the boundary of the Canal, and Mr. George Keefer having a better knowledge of the Canal than any other person—

4th. Resolved, That Mr. George Keefer be employed upon the above duty until it is finished, and submit the result to the Board.

5th. Resolved, That Mr. Barrett he employed on the new line of the Canal, at one pound per day, or £365 per annum.

6th. Resolved, That Mr. Emery be employed under Mr. Barrett at £100 per annum.

Resolved, That the following letter be sent to each of the owners of vessels on Lake Erie, and if an answer be not received in one month, to direct the Solicitor of the Company to prosecute.

GENTLEMEN,

We are informed by our collector, R. Randal, Esq., at Chippawa, that the schooner belonging to you refused paying toll after passing the cut from the Niagara to the Welland River, as well as to give a manifest of the

We beg leave to submit for your consideration a copy of the 23rd clause of the Act of Incorporation of Welland Canal Company—we request you will forward to us a statement of the cargo of said vessel, and let us know whether you will be answerable for the amount of tolls, which is—Flour 1d—Pork 1½d—whiskey 1½d—ashes 2d—wheat per bushel 1½d—iron per ton 1d, merchandize—salt 1d—wessels under 50 tons 5s—above 10s -vessels under 50 tons 5s-above 10s.

If you do not comply with the above, we shall be under the disagreeable necessity of instituting an action against you for the amount, which we hope by a ready compliance with the law you will prevent.

By order of the Board

JAMES BLACK Secretary, W. C. C.

Sth. Resolved, That the sum of £5000 more be advanced, and that the Engineer and Secretary reexamine the estimate bills (after the former has been through the line) that a correct balance may be made with a view of closing the accounts of the Canal to this period.

All future accounts must be presented to and examined by the Secretary referring to the former accounts of each individual—the prices to be affixed by the Superintendent of works, and closed each,

The Vice President is requested to proceed to New York with the estimate and proceedings of this meeting for the approval of the President and Directors, as well as to obtain the President's signato papers, &c., ordered at last meeting.

Approved and signed the 20th June, 1831.

A. McDONELL, Vice President, W. C. Co.

JOHN H. DUNN. (Signed)

7th July, 1831.

At a Meeting of the Directors, held this day at St. Catharines,

PRESENT :

The Hon. John H. Dunn, President. The Hon William Allan, Robert Randal, and Thomas Butler, Esquires.

The minutes of last meeting were read and con-

The matter respecting resisting payment of toll at Chippawa was taken into consideration.

Resolved, That the case be laid before the Attorney General, and if he thinks it advisable the parties are to be immediately proceeded against.

8th July, 1831.

Resolved that the meeting of the Board in future Expungui 2nd be held at 3 o'clock on the first Thursday in every month.

Resolved, That on Mr. Clarke's presenting a statement of expenditure on account of forwarding, after examination by the Secretary, the President be authorised to draw for the amount.

The Schooners Prosperity and Canadian having been employed in transporting produce from Port Dalhousie to Prescott, and the freight belonging to those vessels having been blended with the tolls of the Welland Canal and included in certain drafts made to the Bank,

Resolved, That the President authorise the payment of the amount due to Mr. Merritt for the above from the Bank, on the Secretary forwarding the amount.

Resolved, That the minutes of all the meetings which have taken place be without loss of time fairly entered into the fair minute book and examined.

Resolved, That Mr. Black after that proceed implemediately to York to get the assistance of Mr. Wendam to have the books fairly balanced, and to have a balance sheet for the Board-and that a statement of the funds be laid before the Board monthly.

In consequence of the notice given to the Secre-tary at the meeting of the Board the 2nd of June, that his services would be dispensed with in a short time, he requested the President would inform him more specifically when he was to quit.—No period could be fixed upon, but as soon as the accounts. could be made up the arrangements now made would enable the Company to carry on their concerns with-out his aid; and therefore he might then leave. alan arak arabik danan Nordak Albarah arak Produk dan Januar arabik dan dan dan mengan

THURSDAY, August 4, 187

And the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of t

At a meeting of the Board held this day, is and PRESENT:

The Hon. John H. Dunn, President. Alexander McDonell, Esq., Vice President,

J. Warren, R. Randal, and T. Butler, Esquires.

1st. The Agent reported that during the past month the Grand River Dam was found to leak through the loose stones and under the crib placed on the brush last season, so as to lower the feeder at least 18 inches in dephth :—a force was immediately put on to remove the stones, break them up fill up the cavities with gravel, and put on a sufficient quantity of earth on the face of the dam to make it perfectly tight and prevent a recurrence.

The water commenced raising immediately after the main leak was stopped, from 1 to 1½ inches per day, and it now affords a satisfactory proof of an abundant supply in the dryest season.

The waste weir on the opposite side will be finished during the present month. The one at the Deep Cut, and four others on the line of the Canal repaired will regulate our supply of water. Driving piles at Bergers and Hellem's, and making two flumes at Cranberry Level and Broad Creek will finish the work for the season.

The locks require gravel near the timbers and the towing-path on the lower level, to be walled with timber and stone.

Resolved, That the above be approved, and the necessary repairs done accordingly.

2d. The following crections appear necessary for the security of the Canal this Fall, viz.:—

One guard lock at feeder near Grand River.

One guard lock before entering the ship canal at Hellems'.

One guard lock near bridge at Atkins', one foot below the level of ship canal.

One guard lock at each end of Deep Cut would add greatly to the security of the locks, particularly the one at North End.

Resolved. That the Engineer make out accurate bills of timber for the above, and advertise for proposals, to be given in on the 15th instant, for its delivery by the 1st November at the above places, to be hauled out and placed in the most convenient spot.

And also advertise for proposals for building the above locks, the parties finding their own materials.

Mr. Barrett presented a Report on the expediency of the above.

To the President and Directors of the Welland Canal Company.

GENTLEMEN

The following erections appear necessary for securing the Canal this Fall, viz.:—

add greatly to the security of the locks at North End......400

(Signed) ALFRED BARRETT.

Engineer W. C. Co.

\$4820

St. Catharines, Aug. 4, 1831.

3d. The object in view when the storehouses and boats were built was to assure the public the Canal.

could be navigated without risk or detention. The present season has fully tested the fact; it is, therefore, the interest of the Company to discontinue forwarding on their own account, and to prohibit any of their officers or servants to be interested, directly or indirectly, with any Transportation Company; or in any Commission business, but to throw open the same fully and fairly to public competition.

It is, therefore, proposed for the consideration of the Board (during the present month) that they give notice on the 1st September, that on the 1st Thursday in November proposals will be received for the rent of the storehouses at Grand River, Port Robinson, and Port Dalhouse, for not less than three, or more than ten years, and for the purchase of four boats, horses, harnesses, &c., and that the Company discontinue forwarding from the 15th November ensuing.

Notice should likewise be given that the navigation on the Canal will cease on the 15th November for the season, and that proposals will be received on the 1st November for excavating or deepening the Canal from the Deep Cut to Hellem's.

4th. From various causes—rain, difficulty of clearing, and want of hands—very little progress has been made on the new cut. The labour has been applied where not required, in the deepest digging at the end. There is at present 116 to 130 men on the line.

The following was submitted by Mr. Barrett, which was agreed to:—

To the President and Directors of the Welland Canal Company.

GENTLEMEN,

The contractors for the undermentioned sections having failed to apply a sufficient force to finish their jobs according to their contracts; therefore, in order to secure the completion of the said work by the 1st of April, 1832, it is necessary that the Board of Directors should re-let as follows:

2 chains of Section 3—W. M. Doty, Contractor.
15 chains of Section 4—Sixsnith & Co, Contractors.
10 chains of Section 5—Crague & Boyle, Contractors.

The whole of 7, 8, and 9—H. N. Monson, Contractor.

The whole of 12-G. Hixson, Contractor.

The whole of 15 and 16—Lewis, Garrison & Co., Contractors.

The whole of 17 and 18—H. N. Monson, Contractor.

ALFRED BARRETT, Engineer W. C. Co.

St. Catharines, August 4.

The number of hands required to finish this work by the 1st of May, 1832, will be 500—370 of which must be provided during the present month and brought on the work.

The re-letting to responsible contractors, with a positive assurance of completing the work by the 1st of April, will be attended with an additional ex-

pense of from \$8,000 to \$10,000; but if it can be accomplished, it is proposed to club the expense with each contractor in proportion to the amount of his work, and send to York, Prescott, Montteal, and Quebec, a responsible person to procure labourers, and send them up at once.

To re-let Section 7 to 14, with the understanding they are paid for ditching per yard—or so much per yard, and the Company to do the ditching.

At least one good log shanty (double) to be erected on each section, and the clearing to be done within two weeks of the letting.

Resolved, That the remaining Contractors be notified by the Secretary that if they do not put on sufficient force in the opinion of the Agent and Engineer within two weeks, to firish the work according to their Contracts, that it will be re-let

The price at which the sections are to be re-let shall not exceed 14 cents per yard—the proposals to be received by the Vice President and two Directors.

No. 5. It appears the accounts of tolls have been very imperfectly returned, and a system of credit pursued which prevents the Collectors making their returns with accuracy—there appears by as near a calculation as the Secretary can produce that more than £1000 has been collected up to 31 July.

Resolved, That the Collectors at Chippawa, Dalamended, Housie, Robinson, and Dunnville, have immediate notice that no further credit be allowed except on property subject to charges at the different Forwarding Houses on Lake Ontario and Merchants upwards, and that the balance now due be immediately collected—and no property to pass until the whole amount of toll due from the owner be paid.

No. 6. Resolved, That the Collectors at Grand River and Port Robinson keep the accounts and pay out all monies returned to the men for labor and repairs on that pair of the work—those from Deep Cut downwards will be returned and paid at this Office—the Superintendant only certifying to the amount of labor performed, and the Secretary to notify them accordingly.

No. 7. The Engineer recommends that two hands be employed on every six Locks, under one Superintendant to keep up and regulate Locks in preference to putting them out by Contract as at present.

Ordered, That Jacob Turner be employed at one dollar per day and board, and the men at \$20 and \$22 per month, including board.

Resolved, That the President be requested to apply to the Lieutenant Governor for debentures for the further sum of £10,000 on account of the £50,000 Loan.

Resolved. That the balance on Chippawa Bridge £87 5s. 5d., be paid.

Resolved, That a draft be signed for the sum o' £433 8s. 2d., for that amount advanced by the Secretary on account of the estimates in November 1830-the same to be paid by him to the Bank at Niagara, on account of notes received on account of Phelp's sale &c.

Resolved, That the balance now in the Bank United States, Buffalo, amounting to £1406 15s. 2d., or \$5627 03, be drawn on account of estimates, &c.

The following letter was delivered by the Secretary and read.

"St. Catharires, Aug. 5, 1831.

"To the President and Directors of the Welland "Canal Company.

"GENTLEMEN,

"As no answer has been made to my application to the President at the last meeting of the Board, as recorded in the minutes, and read and confirmed yesterday, I beg leave to tender my resignation of the office of Secretary to the Company—at the same time to prevent the inconvenience which might arise from my leaving before another person was prepared to occupy the situation I am willing to continue so long as may be required to examine and balance the accounts &c., but not to engage on any new concern.

## "JAMES BLACK, Secretary, W. C. Co."

Resolved, That Mr. Black's resignation be accepted, but that he be requested to continue until another person be appointed and sufficiently acquainted with the accounts, &c.

Resolved, That two Lock keeper's houses be erected, one at the Furnace, and one at or near the Bridge at St. Catharines, one story 14 feet posts, consisting of two rooms and one chimney.

Resolved, That Mr. Martell be employed as Collector at Port Robinson during the navigation of the Canal, at \$1 per diem.

Resolved, That the Company have no connexion with the Schooner Canadian—Mr. Merritt is therefore to settle her accounts.

Mr. Black, the present Secretary, having resigned his situation,

Resolved. That public notice be given that proposals will be received for a competent person to fill it until the 1st of September. He must be a good Book Keeper, and active man, his salary will be £150 per annum; in the mean time that Mr. Walker be employed during the present week to attend to the accounts and duties of the office.

It was afterwards Resolved, That the advertisement for a Secretary to succeed Mr. Black be post-poned until next meeting of the Board.

October 6th, 1831.

At a meeting of the Board of Directors, held this day at St. Catharines,

### PRESENT:

The Hon, John H. Dunn, President. Alexander McDonell, Vice President.

The Hon. William Allan, Henry J. Boulton, John Warren, Robert Randall, and T. Butler, Esquires.

The minutes of last meeting were read, and confirmed.

James Simpson's letter, 23rd July, respecting £125 due from Simpson and Pratt, and awarded to Monson, was read.

Ordered, That they be written to with a receipt for their signature, after which it is to be reconsidered.

Decow's letter, 4th August, read.

As his claim is before the Arbitrators, the Board cannot entertain it.

Colin McNelledge and Mr. Clark's letters, respecting allowance to vessels detained on the Canal were read.

Ordered, That the tolls be remitted on such vessels as were detained in consequence of the breachat the Aqueduct, or such portion as may be reasonable.

Mr. Otley's application for the situation of Secretary was read, as was also Mr. David Macnab's.

Ordered, That Mr. Macnab be written to, stating the duties of the office of Accountant, together with the salary of £150 per annum, and requesting him to attend at this office till the next meeting of the Board, when if approved of, he will be appointed.

The Vice President afterwards produced an application from Messrs. J. W. Keating, D. McDonell, and N. H. Baird, together with a letter from Colonel By, on behalf of Mr. McDonell to fill the said office—but as the Board had previously agreed unanimously to the preceding resolution, they could not rescind it.

Before there was an opportunity to copy thin, the Recr. Gent. required them and they were submitted.

And they were sent accordingly to him.

Ordered. to be entered on the minutes and deposited in a secure place.

Orson Phelps applied for £5 for going at various times to St. Catharines.

Ordered, That he be required to send a bill of his actual expenses, and that it be paid.

Sensabaugh's claim for securing timber in 1825— £5 5, submitted, and rejected.

Plan and estimate of Office submitted.

Ordered to be deferred.

The Surveyor General's letter respecting Lots 27 and 28 Humberstone, read—Ordered, That a letter be written to Mr. McMahon on the subject.

The Attorney General's opinion respecting tolls at Chippawa considered—Ordered, That application be made to next meeting of Parliament on the subject.

October 7, 1831.

At an adjourned meeting of the Board, held at St. Catharines,

### PRESENT:

The Hon. John Henry Dunn, President.
Henry J. Boulton,
John Warren,
Robert Randall, and
Thomas Butler, Esquires.

Mr. Wood's application to repair the buildings belonging to the Company, which will cost \$150, and

to rent them for four years in lieu thereof, and if the Company should require them before that period, to pay him for said repairs—Agreed to.

Mr. Barrett submitted a plan of Guard gates instead of Locks, which were ordered to be constructed.

As this plan is supposed to answer the purpose, and at a considerably less expense—Ordered, That it be adopted.

W. C. Johnson applied for payment of work on tow path Grand River (not estimated) amounting to 2000 yards. The Engineers have recommended that 1000 yards be paid for on certain conditions.

Resolved, That the Agent examine the above and report the same to the Board accordingly.

A letter was read from Mr. Bush of Ogdensburgh, requesting the Canal may continue open during the month of November.

This was afterwards altered to 15 November.

Resolved, That it be kept open till lst December.

W. C. Johnson's agreement to excavate &c., part of sections 3 and 4 of Gravelly Bay route, was submitted and—Agreed to.

The 3rd resolution of May 2nd last, was considered, so far as regarded the berm bank and culverts from Broad Creek to Grand River, when it was

Resolved, That the same be put into immediate effect and proposals be received on 15th November for the work—Engineers to estimate and prepare plans against next meeting of the Board.

Mr. Yates' account of Packet Boats, amounting to £180 6 9, was submitted and passed.

H. N. Monson's letter respecting J. Simpson (read at last Board) forbidding any money to be paid to said Simpson & Pratt on his account without consent was read.

Resolved, That it be not paid to any person at present.

A letter was read from Mr. R. Dickson respecting a claim of R. Campbell's upon the Company, and for which he has instructed Mr. D. to proceed against the Company.

Resolved. That the Secretary write to Mr. Dickson, stating that Mr. C. has no claim whatever.

Lewis Garrison & Little applied for payment of the 1 reserved under their Contract.

Resolved, That the petition cannot be complied with—the Contract must be adhered to

Resolved, That Wm. Hamilton Merritt, Esq., the present Agent of the Company, be appointed to the office of Secretary in the place of Mr. Black, resigned, at an annual salary of £400 per annum, to take place on Mr. Black quitting.

Resolved, That the office of Agent to the Welland Canal Company be abolished, and that in future the Secretary shall discharge the duties heretofore performed by the Agent, and that a competent person be appointed as accountant to the Company, who shall keep the books and accounts, and make such other entries in the minutes of the Secretary's office as may be required.

Moved by Mr. Boulton, seconded by Mr. Warren,

That after the next election of Directors a President shall be chosen who shall be resident near the line of Canal, and that he shall be entitled to a salary of £500 per annum, and that he shall assume, under a responsibility to the Board of Directors, the general management of the affairs of the Company.

Deferred to next Board.

The undermentioned resolutions were then carried.

1st. That notice be published to receive proposals for excavating the Shin Canal from Deep Cut to Hellem's, on the Gravelly Bay route, and for making a guard gate at the entrance of deep cut, on the 15th November.

2nd. That so much of the 3rd Resolution of the 4th August as regards the Company's discontinuing forwarding after this season, and for the sale of boats. &c., and letting of the storehouses, be carried into effect.

3rd. That the toll keepers' accounts, and all persons concerned in the Welland Canal shall at the end of each week. (say Saturday) make a full statement and return of all tolls, vessels, &c., and all matters relating to their respective duties, and the accountant lay the same before the first meeting of the Board in one general sheet.

4th That Mr. K. Emery be allowed £2 5s, in addition to his present wages as assistant engineer for the last two months.

6th. That American vessels forming a line from Expunded and Soptember, 1853 Oswego to Cleveland be permitted to pass the Canal by paying a duty of 5s. per ton and 3 cents per barrel on salt, and the vessels forming a line from Amherstburg to Prescott or Kingston only a toll of 5s. per ton on merchandise upwards.

7th. That Mr. Joseph Wenham be paid £50 for services to May 1827.

FRIDAY, 4th Nov., 1831.

At a meeting of the Board of Directors, held at St. Catharines,

PRESENT:

The Hon. John H. Dunn, President, Alexander McDonell, Vice President, The Hon. William Allan, and Robert Randal, Esquire.

The minutes of last meeting were read and confirmed, with the exception of that respecting the appointment of a resident President, which is to stand over until there is a full meeting of the Board called for the consideration of that particular purpose.

In conformity with the resolution of the last Board Mr. Barrett produced an estimate of the expense of Berm Bank and Culverts from Broad Creek to Grand River, amounting to £1,234 2 2.

The Board of Directors feel sensible of the importance of having the above attended to, but having no means at their disposal which would authorise the immediate commencement of that work, the £50,000 loaned by the last Legislature being restricted, it is therefore

Resolved, That the Berm Bank alluded to be made as soon as means can be devised to defray the expense of the same, together with one in Humberstone.

Mr. S. Street's letter respecting stone taken for the purpose of the Company.

Resolved, That Mr. Street be informed that the Company will allow him the same as Mr. Augustus Jones, viz: 4d per cord.

Resolved, That the undermentioned memorials be presented, viz:

1st. To the Legislative Council and House of Asembly, U. C., for the privilege of making rail roads, and to increase the capital of the Company for that purpose.

2nd. To the same, to amend the former act as far as regards the toll at Chippawa.

3rd. To the Legislative Council and House of Assembly, L. C., to allow them such aid as they may deem expedient to complete the works which their present means do not allow them to use.

Mr. Barrett presented a report on the Gravelly Bay route, to contract if not less than 20 feet.

Resolved, That the same be adopted.

William Galbraith and John Lax proposed to execute the work required from Deep Cut to Gravelly Bay route.

Resolved, That the same be received on the 15th inst., and be determined by the Vice President and Mr. Randal, together with all other proposals.

Mr. McKay's application for office of Secretary, was read.

To be considered with other applicants.

Mr. Robert Dickson applied for a copy of R. Campbell's petition respecting his claim.

Resolved, That Mr. Dickson be allowed to inspect the same at the office, but not to have a copy of it.

Mr. Martell having been allowed 5s. per day while Collector at Robinson, applied for an increase from the 9th ultimo of 2s. 6d. per day.

Resolved, The same be complied with.

Mr. Simpson and Mr. Monson's letter presented.

Resolved, That the resolution of the former Board be adhered to, both parties having required the amount to be withheld.

Mr. D. Thompson presented a notice of submitting his claim to the arbitrators.

Resolved, That the Board having once appointed a Committee to determine on the claims of Mr. Thompson, do not deem it expedient to again enter into the subject.

York and Conrod's claim submitted.

Resolved, That the same be referred to the Committee; on reference it was found to have been investigated and not allowed.

Mr. Clark's letter and statement of forwarding accounts were presented.

Resolved, That the Vice-President and Mr. Randal be requested to examine into the correctness of the same.

 $O_5$ 

The balance in Bank of United States being inefficient to meet the present demands,

Resolved, That the President make application to His Excellency for issuing debentures to the amount of £30,000.

At the request of Mr. Yates, John Clark, Esq., was nominated for the office of Book-Keeper to the Company, on Mr. Black's retiring from his present situation of Secretary-whereupon it was

Resolved, That John Clark be appointed Book-Keeper, with a salary of £150 per amum, upon his giving security in the sum of £1000.

Resolved, That Mr. Geo. Keefer, Jun., be authorized to negociate and settle with the claimants at Grand River for damages sustained by them, and that Mr. Keefer act by advice of, and after consultation with, the Vice-President and Agent.

The Toll Account was laid before the Board, amounting to £2051 1s. 2d. to October 1, 1831, viz.:-1830, £174 10s. 61d.-and 1831, £1876 10s.

Tuesday, December 23, 1831.

At a meeting of the Board of Directors, held this day at York.

PRESENT:

Alexander M'Donell, Esq., Vice-President.

The Hon, William Allan.

John Warren, i i) Robert Randal, and Esquires.

H. J. Boulton.

The minutes were read and confirmed.

The estimate, amounting to £2543 15s. 11½d., approved.

Whereas there are many contractors on the new route to Gravelly Bay who have taken the contracts at prices which will not enable them to complete the same, and as the contractors themselves are not men of responsibility, by reference to the Engineer upon the subject, he states, that by increase of price to a rate that will enable them to fulfil their contract, the original estimate given in by Mr. Barrett, as the amount of the new cut, will not be exceeded, many contractors having contracts at a less price than the estimated cost, and who, from the nature of the work, will be able to complete the same.

Mr. Randal's account for £100, as Collector at Chippawa. was deferred till Mr. M'Micking's account of tolls, £19 17s. 32d., which was to have been deducted, be further explained by Mr. Merritt.

The Resolution respecting the Berm Bank from Grand River to Broad Creek, passed the 4th November last, not meeting the approbation of the present Board,

Resolved, That the same be reseinded, and that the original Resolution, passed on the 6th of October, be carried into effect.

Mr. Jacob Keefer's account and letter to be reconsidered, it being stated that he was appointed Collector at Thorold to accommodate his father.

Mr. Merritt's letter respecting \$1000 to be advanced to Messrs. Smith & Macey on account of steamboat Peacock to be deferred for further information, or until the whole account is made up.

J. Coulter's bill, £7 13s 21d., on same account, ditto.

Mr. M'Micking's bill, £14 10s., ordered to be reconsidered.

Messrs. Grant & Duff's bill, £1, deferred.

E. Washam's letter and account, £30 5s. 6d., do.

J. C. Spence's account, 12s. 10d., to be paid from first receipt of toll.

Henry Bliss' letter respecting #50 interest due, to be ditto.

W. K. Emery's application to be reconsidered.

Garrison & Co.'s, Hixson & letters to be recon-Galbraith's, and Perry's ∫ sidered.

Mr. Clark's letter and enclosure considered respecting the appointment of Collector at Port Col-

Ordered, That a letter be written to Mr. M'Mahon on the subject, informing His Excellency that the Directors have not, nor do they wish to interfere in the subject. 210.

Mr. Merritt's letter respecting purchasing part of the hydraulic privileges read.

The Board leave the matter entirely to Mr. Merritt, who is at liberty to act as he thinks proper.

No. 5.

## REPORT

OF THE

### BOARD OF DIRECTORS

OF THE

## WELLAND CANAL COMPANY,

For the Year 1831.

The Directors are desirous to lay before the Stockholders, as early as possible, a statement of their proceedings for the past season.

The first object which occupied their attention . was the termination of the Canal in Lake Eric. As this important subject was left by the Legislature to their decision, and being one on which a diversity of opinion existed, they gave it every possible attention.

Various surveys were made from the present line of Canal to the mouth of Grand River, Boulton's Bay, Graybiel's Bay, Kinnaird's Bay, and Gravelly Bay. After which, [viz. : in the latter part of April,] the Directors examined the different Bays on Lake Erie in person. They likewise obtained the following opinions, in writing, from Mr. Barrett, their principal Engineer, (see Appendix A.,) and Mr. Lewis, who was appointed to make the surveys of the different harbours. In addition to which, in consequence of various reports circulated respecting Gravelly Bay. John Warren, Esq., one of the Directors, and John B. Yates, Esq., one of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the principal of the p pal stockholders, were selected on the part of the

Board, in May, to again examine it. At the ensuing meeting, after mature deliberation on the various topics connected with it, the Board (in the absence of Mr. Boulton, who was, and continues to be, deof Mr. Doutton, who was, and control of this route, unanimously resolved on adopting the route to Gravelly Bay—now Port Colborne. These surveys necessarily occupi-The work was not put under coned a long time. tract until late in June, which, together with the wetness of the season, has materially retarded its progress, and in consequence thereof, it will not be completed until the middle of next season. Not-withstanding the decision of the Board, to terminate the Canal for ship or schooner navigation at Gravelly Bay, on Lake Erie, (which, in their opinion, was required for the general benefit of the community, as well as the interest of the Company); yet, as it was evident that advantage might be derived from having a harbour at the mouth of the Grand River, also, both from the acknowledged importance of its more western position, and to increase the number of channels and case of access to the Canal; and as it appeared from the Reports that such harbour could be easily made, the Board authorized the expenditure of £3000 for this purpose—which, from the progress of the work, and expenditure already made, the Directors have good reason to believe will not exceed the original estimate. The extent of the Western Pier is 600 feet, and it appears quite sufficient for the purpose intended, as the channel is of suitable depth for the navigation of the Upper Lakes. Lake Erie was clear of ice above this port on the 10th of April; the Company had a dredge to keep open the bar, and a party of men to pilot in any vessel that might arrive; the Canal was likewise clear of ice and in good order at this period-while the lower part of the lake remained closed until the 8th of May. Notwithstanding this early preparation to do business, when the Canal could have been advantageously used for the double voyage by the Niugara River, owners of property were deterred from giving it this direction to market. A rumour, encouraged and circulated, if not invented, by some persons inimical to this useful work, that a slide of earth, or, as it was emphatically called, "an avalanche," had occurred in the early part of the season, at the deep cutting, and filled up the Welland Canal, had obtained general currency. It was believed more readily, perhaps, because a similar occurrence had taken place, when the Canal was nearly completed on the original plan. There was not sufficient time to correct this unfounded report, until the evil of its circulation had been severely felt, in the commencement of their operations. The fact, that, by the alteration of the level, (it being now raised 16 feet higher,) such an accident cannot happen again, was not then generally known; and not being aware or suspicious of any designed misstatement or imposition, many were misled, and made their arrangements to send their property by other channels, although they had previously designed to send it through this Canal. No improvement having been made at the mouth of the Grand River, the harbour was not deemed sufficiently safe, and mariners approached it with great caution, and under much apprehension. In consequence, probably, of the general want of confidence in the Canal and harbours, no previous preparations had been made by the merchants; to avail themselves of this route, although the inducement was great throughout the

latter part of April, and beginning of May. Directors have, however, great satisfaction in being enabled to say that public confidence is now fixed on both the harbour and this branch of the Canal by the summer's experience; and with the additional improvements made, and now in progress, no apprehension need be entertained of a recurrence of such injurious impressions.

Another great inconvenience, however, still continues to injure the business of the Canal; this arises from a dam thrown across the Grand River, some distance above Dunnville, near the rapids, which prevented the greater part of the internal trade by the Grand River from descending this route; and up to this period no preparation is making by the merchants in the interior to descend the river, in consequence of this and other obstructions-which we trust will be remedied during the present session of our Legislature; by granting a charter to a Company to make it navigable as far as Brantford. It must also be observed that no vessels or craft were constructed suitable for the double voyage on both Lakes, and for the Canal navigation-no regular lines of communication were formed between the different ports on Lakes Eric and Ontario; and only four or five hoats were in readiness to ply on the Canal. In addition to these unavoidable impediments, a breach took place in an embankment near the aqueduct on the upper level of the Canal, in September, during the most active part of the season, which gave a check to the business and caused an interruption of one month. A recurrence of such an accident will be prevented during the present month by strengthening the banks where required. The expenditure for the past season, out of the appropriation of the Legislature, is as follows :-

In payment of debts due various individuals last year, as per Report. £5500 0 0 and being the In payment on the work which was in progress,

which was in progress, but not estimated....£5500 0 0 11,000 0 0 0 Contingencies, Engineer's salaries, &c. 2,436 14 4 The expenditure during the past season, in finishing the main Canal, and on the new route on the new route ____. 11,172 16 5,

£24,609 10 9

There has likewise been expended, 2,315 18 2

Total.....£26,925 8 11

In order to deepen the Canal from Port Robinson [Deep Cut] to the beginning of the Gravelly Bay route, for ship navigation, it was necessary to draw off the water as early as the 15th Nov., of which the Board gave timely notice. This is much to be regretted as it has materially interfered with the fall business. It will be again open the first day of April, for the ensuing season. Impediments must necessarily attend the opening of all works of such magnitude; nevertheless, the Stockholders and the public have every reason to be gratified with the result. The real estate and lty draulic privileges belonging to the Company, occasioned much trouble and embarassment in their disposition, and it, was decided by the unanimous vote of the Directors, to dispose of them, in the year 1829. In pursuance

thereof, notices were published for six months in succession, in the Montreal Gazette, New York Commercial Advertiser, and several country newspapers. The best proposal offered was \$25,000, payable in ten years, with yearly interest of £1500. This proposal was acceded to, in the early part of the present season, and the title made out accordingly—the Directors considering it far more advantageous for the Welland Canal Company to realize £1500 per annum, at once, with a certainty of procuring the active exertion of another company, who must embark a large capital for the purpose of creeting machinery, &c., to make it profitable to themselves, which will bring a corresponding increase of toll to the Canal, than to keep the property in possession of the Company, increasing the objects of its attention not immediately connected with operations on the Canal, and rendering their affairs more complex in their management. This sale proves that the Canal has not only given an impetus to the general improve-ment of the country, but has created an actual in-crease in the value of property, far greater than the cost of its construction. Trade and commerce are seeking new channels—vessels are in the course of building adapted to its use, the demand for lumber far exceeds the supply, notwithstanding there are twelve saw mills in operation on and contiguous to the line of Canal—six grist mills are built and in course of building, besides various other machinery,—and a market is opened for the most bulky and useful articles, heretofore of little value. During the past season, three storehouses and a few scows or boats were procured by the Company, for the purpose of forwarding; a line of communication was kept open from Port Dalhousie to L. Erie, by means of a steamboat, which plied regularly between Port Robinson and Buffalo, and answered the double purpose of towing vessels up the Niagara river, and conveying produce from the American side; a line of packet or freight boats was likewise in operation between Port Robinson and Dunnville, thus forming almost a daily communication between Buffalo, Grand River and Port Dalhousie. This is now discontinued, and the attention of the Directors hereafter, will be confined exclusively to keeping the canal in distate of repair for transportation only, leaving forwarding, and all business connected therewith, open to individual competition. Within the past season there has been transported on the Canal, the following quantity of produce, viz: 30,081 barrels Flour, 8,600 barrels Pork and Lard, 1,795 barrels Whiskey and High Wines, 2,600 barrels Ashes,
210,1043 bushels Wheat,
4124 casks Tobacco,
91 kegs Tobacco, 307,718 Staves; with the victor small of the settlering of 986,888 feet Boards, 4,189 Saw Logs, 28,500 feet Square Timber, 14,182 barrels Salt.

wego principally wheat down, and salt, up., This trade is confined to Lake Ontario; and from the number of superior flouring mills recently erected, at Osmego, cannot fail of increasing to an immense extent, it is also evident, that we have not yet felt; the influence of the Canada Trade Act not 1000, bbls. 14,182 barrels Salt, and there was been been of flour having been diverted from Lake Erie to the 736 tons, 14 cwt., 2 qrs., 2 lbs. Merchandisc. Montreal market since the Canal has been in opera-tion. Much will depend on the enterprise of the Miscellaneous articles, such as potatoes, butter, cheese, grass seed, vinegar, oysters, brls. fish, bis-Quebec and Montreal merchants, who, we trust, will cuit, and various other items; are not included in the above: turn their attention to the subject as the advantages

From the best information we can collect, there has passed over the portage at Queenston this season—
65,000 Bushels Wheat,
11,035 barrels Flour,
650 barrels Ashes, 650 barrels Ashes,
4,139 barrels Pork and Lard,
300 linds Tobacco,
105 kegs Tobacco,
2,000 feet Walnut Boards,
450 tons Merchandise. Thus it appears; as near as we can ascertain, that prosent season of the Lakes, together, the prosent season of the Lakes, together, the prosent season of the Lakes, together, the prosent season of the Lakes, together, the prosent season of the Lakes, together, the prosent season of the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the prosent season of the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, together, the Lakes, the Lakes, the Lakes, the Lakes, the Lakes, the Lakes, the Lakes, the Lakes, the Lakes, the Lakes, the Lakes, the Lakes, the Lakes, the Lakes, the Lakes, the Lakes, the Lakes, the Lakes, the Lakes, the Lakes, the Lakes, the Lakes, the Lakes, the Lakes, the Lakes, the Lakes, the Lakes, the Lakes, the Lakes, the Lakes, the Lakes, t there has passed between the Lakes, together, the 1,186 tons, 14 cwt, 2 grs. 2 lbs merchandise. Which at our present rate of toll, admitted by all to be moderate, would amount to £4,150. It appears that in 1829, the quantity passing between those lakes was nearly as follows: 270 tons Merchandise,
5595 barrels Flour,
453 barrels Pork,
620 barrels Whiskey and High Wines,
476 barrels Ashes, 476 barrels Ashes,
508 hhds and 765 kegs Tobacco,
97 barrels Hickery Nuts,
5 barrels Tallow,
5 barrels Feathers,
23 casks Bees Wax,
97 kegs Butter and Lard,
2148 bushels Wheat.
Which would smount program to the sum of £375 Which would amount, pro rata, to the sum of £375 to £400, and shews an increase in two years of more than 1000 per cent. From these data we have good reason to infer, that the business created by the Ganal during the next two years will improve in a much greater proportion. In submitting this flattering statement of the prospects of this Canal, the Directors feel no little gratification in being able to state, that the increase alluded to is entirely exclusive of the New York trade, in Scarcely, a ton of which passed this route the last season, The transit is wholly from Upper Canada, and to and from Os-

to be derived from sending! American produce thro!

the Colonies are so apparent. Itwas never anticipated by the most sanguine, that this work would remunerate the Stockholders without drawing a portion of the trade of Ohio to and from the New York market. The experience of the first season proves a far more favorable result. The emigration to the Western part of the Province next year, we have reason to believe, will be great. This will continue with a rapidity heretofore unexampled; and in a few years the fruits of their industry will form no inconsiderable item to the general increase of that flourishing part of the country. The Ohio Canal will be finished throughout next year. New commercial houses are forming in Cleveland and other parts of Ohic, in connexion with those of Oswego, Ogdensburgh and Montreal. We have assurances of a regular line of vessels being formed between Oswego and Cleveland, to commence early in the season-which, when brought fairly into operation, cannot fail to draw a portion of the transit of Ohio, Michigan, and the country bordering on those Western waters, (which are rapidly and steadily increasing,) to and from the New York market.—The people of the Western country, generally express a warm feeling in favor of this route, and will not fail to avail themselves of the natural advantages it presents, when fully and fairly developed. In another season three different channels will be open between those lakes-the most western and easiest of access is hy the mouth of Grand River, where a good harbor is now in readiness—another, by the Niagara river, via Buffalo and Fort Erie-and the third will be entered at equal distances between the two, at Port Colborne where another new harbor will be made; this presents the shortest and best route between the Lakes. There is good reason to expect from the preparations now making that as much produce will pass the Canal by way of Grand River the first month of the ensuing season, as has gone through the whole of this. find the yearly increase of transportation on the Erie Canal, baffled every calculation made on the subject by the most sanguine, and we have every reason to expect a similar result. The Directors have given their personal attention, throughout the season, to the Canal, with far greater satisfaction to themselves than heretofore; as they have witnessed, from time to time, the result of their long and arduous duties.

JOHN HENRY DUNN, President, A. McDONELL, Vice-President. T. BUTLER, ROBERT RANDAL, Directors. J. WARREN, W. ALLAN,

Welland Canal Office, St. Catharines, Dec. 31st, 1831.

This Report was intended to have been published in November last; since then a bill to improve the Grand River has passed the Commons House of Assembly, and will no doubt become a

# APPENDIX

[A.]

To the Hon. J. H. Dunn, President of the Welland Canal Company.

SIR :- Being instructed, through William Hamilton Merritt, Esq., to give my opinion of the best

route for a sloop Canal from the Deep Cut into Lake Erie, together with my reasons for preferring the same, I beg leave to state, that I am decidedly of opinion the best route is the one terminating at Gravelly Bay. My reasons for recommending this route, are, that it is the shortest and most direct route across the Peninsula; it is the cheapest route we have been able to discover; it can be completed for \$60,000 less than the Grand River route, and is cleven miles shorter; and by adopting this route you combine the advantages of the earliest and shortest navigation. You will be able successfully to compete with opposition in the transit of property, by adopting the Gravelly Bay route. In proportion to the less amount of capital required in its completion, the less distance you have to tow vessels; besides the saving of time in passing from Lake to One further reason for preferring Gravelly Bay route, is,-that the whole work may be done without interrupting the navigation in the mean time; whereas, on the other, you either lose the use of the Canal the best part of two seasons, or very much delay the completion of the work.

I am,

Sir,

Your most obedient servant, ALFRED BARRETT,

Engineer.

CHIPPAWA, May 15th, 1831.

## IN THE YEAR 1832.

The greatest activity prevailed on the line this year, until interrupted by the Cholera, which carried off some contractors and many of the workmen. Notwithstanding which the work was nearly comoleted. The accompanying Report of the Directors for this year [hereto appended marked No. 1.] enters very minutely into details—I refer also to the minutes for this year [appended, marked No. 2.] and the Report of a Select Committee on the Welland Canal [appended, marked No. 3.], and also a concise view of the Inland Navigation of the Canadian Provinces, by A Projector [marked No. 4.]

Documents referred to in the foregoing remarks:

Report of the Directors for the year 1832, ..... marked No. 1.

Directors, viz:

John Warren, and Robert Randall, Esquires.

And the private Stockholders— The Hon. John Henry Dunn, Alexander Yates McDonell, Esquire, T. Butler, Esquire, Ogden Creighton, Esquire, and George Keefer, Esquire.

No. 1.

## REPORT

OF,

THE BOARD OF DIRECTORS

OF

THE WELLAND CANAL COMPANY

FOR THE YEAR 1832.

The Board of Directors have deferred the publication of their annual report beyond the usual period, that they might be enabled to announce to the stockholders and the public the completion of the Welland Canal, which will be in readiness at the opening of the navigation to pass vessels by the new route from Port Colborne on Lake Erie to Lake Ontario—the entire distance being only 28 miles.

The rapid manner in which the work progressed, until the prevailing epidemic reached the caral, will sufficiently support the statement made in the last Report, of 1831. That the new route, or continua-tion of the ship channel direct to Lake Eric, would have been completed at the time specified: but as soon as the cholera made its appearance the affrighted workmen fled from the scene of death. One doctor fell a sacrifice to his humano exertions, a second, hired at double pay, was seized with sickness, and obliged to return to St. Catharines. No competent medical aid could be procured at any price; and upwards of seventy laborers, who a few weeks before were in perfect health, fell victims to this sweeping scourge. When the disorder abated, and the work was returned, it was found too late for the contractors to finish their jobs before the close of the season—the accumulation of water and other obstacles occasioned by the suspension of the work, rendering the fulfilment of their engagements impracticable.

Before and during this interruption, on the new route, other important works were carred on with vigor; the canal and feeder underwent a thorough repair; the Grand River Dam was made permanent with stone and gravel; waste and stop gates were placed at Dunnville—head of the Feeder, Port Robinson, Broad Creek, Marshville, and the aqueduct, to prevent overpressure on the dam and banks by a regular discharge of the superfluous waters.

A berm bank has been erected from Dunnville to the new cut on the entire line of the feeder, on the recommendation of the arbitrators appointed by the Legislature to award damages to the various individuals residing on the line of the canal, who conceived it necessary to preserve the health of that part of the country—it will also reclaim a large tract of land which would have been overflowed. The embankments have been raised and strengthened on the entire line of the main canal, and the work throughout has been made as permanent as time and circumstances would permit.

The navigation was interrupted about one month last season, in consequence of the grass growing up in a part of the feeder, or Cranberry Marsh, unobserved by those having charge of the work, as well as the boatmen passing daily on the canal. The obstruction was removed in a few days, after the cause

was ascertained. No casualty of amount occurred on the line from any defects in the works during the season. The removal of this obstruction tended however to convince a committee appointed to investigate the cause of this long and serious stoppage of the navigation, that to insure an abundant supply of water at all times, it would be only necessary to deepen the feeder from near Broad Creek to the main canal, which they recommended to be done, and which was accordingly executed during the winter.

## PRESENT STATE OF THE CANAL.

The dam at the Grand River is a most permanent work. It was constructed in 13 feet water, 7 feet high, with a base of 150 feet, forming a tumbling way 9 chains in length. Waste weirs are likewise constructed on the right bank of the river, 10 chains in length, on a clay bank or point, which has an elevation barely sufficient to retain the water. In addition to this there is a length of about 9 chains cut down through this bank, so as to discharge the surplus water from the Grand River when it rises two feet above the natural surface; by which means a sufficient space is allowed to discharge any quantity of water, which is under perfect control, and regulates itself; so that with ordinary care no danger need be apprehended to any part of the works in this important part of the Canal, which may be considered the key to the whole.

An embankment is made from the right bank of the river, across the low lands, fifteen chains in length, slope two to one, with an elevation three feet above high water mark. A large stop-gate is constructed immediately at the mouth of the feeder, to control the water at its entrance into the Canal. A Culvert is placed under the Canal, about 200 yards below this, to drain the country from Dunnville to Cranberry Creek, 3 miles distant; and another waste weir and waste gate to draw off the water when necessary at Broad Creek. Thence to Marshville, 9 miles, no artificial erection is necessary. Here a waste weir and another stop-gate is placed; half a mile below this is a Culvert through which Mill Creek passes, which discharges the marsh water for on extent of nine miles; thence, for the distance of seven miles, no other erection is necessary, with the ex reption of a waste weir already erected, and a stop gate, which were intended to retain the water at full head in the feeder, in case of a breach occurring in any part of the main Canal. (The dimensions of this feeder are 20 feet bottom, 36 feet surface, 4 feet depth, and 20 miles in length.) This point is the termination of the feeder or Boat Canal, where it discharges into the main Canal seven and a half miles from Lake Erie.

Leaving the feeder at this point, we will, for the purpose of giving a more accurate description of the Ship Canal, commence at Lake Erie. First, with respect to Gravelly Bay, now Port Colborne. This may be considered almost a natural Harbor, two reefs of sunken rocks converge within 620 yards of each other, leaving a depth of from 8 to 22 feet water; the main channel being to the westward of the entrance to the Canal. The water maintains a sufficient depth to near the shore, and the Harbor is sufficiently spacious for all purposes. The bottom is of clay, affording excellent anchorage, and the approach

to it uninterrupted and safe. Piers are in progress, which will form a perfect shelter for vessels, and completely protect the entrance into the Canal.

A Lock of 6 feet lift, constructed of stone above water, brings you to the summit, which is supplied with water from the Grand River, by the Boat Canal or feeder before described. From this Harbor a towing path is made on both sides of the Canal, to the junction; one side of which forms an excellent carriage road, 30 feet wide. Two bridges and two culverts are constructed in this distance, which altogether forms as beautiful a line of Canal as any in America.

The Aqueduct over the River Welland, one mile from is, is constructed of wood, 600 feet in length, and serves as a waste weir to regulate the water to near the Deept Cut, four miles; where there are two other waste weirs and a stop gate. At the South end of the Deep Cut are two Locks of 8 feet lift each, by which you descend to the Chippawa or River Welland, on the route leading to the Niagara Proceeding two miles further, to the north end of the Deep Cut, another waste weir regulates the supply of water for the remainder of the descent to Lake Ontario. The water can be discharged from this level, at pleasure, into the Welland river. The first descent towards Lake Ontario is made at this point by two Locks of S feet cach. Thence one mile is a waste weir on the west branch of Beaver dam Crock and a culvert under the Canal. Thence two Creek, and a culvert under the Canal. miles is another culvert, to pass the middle or main branch, and a waste weir on the east branch of said Thence to Thorold, two miles, are two waste weirs, to discharge as much water from the Canal as may be required by the 10 mile creek, or to retain it in the main channel. Thence a continuation of waste weirs and Locks alternately on each level (except three, where they are also required) to the Harbor.

The water is taken out of the Canal, from the summit, in three different positions, for hydraulic purposes, so as not to interfere either with the navigation, or to obstruct it fro any necessary repairs.

From the Grand River throughout to Lake Ontario, the lands and waste weirs work well, and answer the desired purposes.

## REPAIRS AND ERECTIONS,

Recommended to render the Canal perfect for the navigation of vessels.

- 1. Dec ening the feeder from within two miles of Broad Creek to the main Canal.
- 2. Repairing two Locks on the main Canal, one of which was found defective at the close of the navigation, so as to render it necessary to take up one end from the foundation.
- 3. Deepening some parts of the Deep Cut, and extending the pier 100 feet at Port Dalhousie. The outer pier at Gravelly Bay is under contract, and will be finished during the season.
- 4. To construct a stop gate or feeder above the main Canal.
- 5. To strengthen the banks for the last time; to raise all those over ravines or low grounds, one and a half feet above the ordinary height, to prevent damage from sudden floods.

Those repairs would have been nearly perfected before this time, had the Board been provided with means; as the weather in the latter part of the fall and the commencement of the winter has been peculiarly favorable for such operations. [They are now in progress.]

### ALTERATIONS,

Recommended to command the entire transportation between the Lakes.

It must be obvious to the most casual observer, from the facility and certainty which steamboats offer, they will always command a great portion of light and valuable freight, as well as passengers; and without putting our harbors in a situation to receive those boats, the Canal cannot depend on receive those boats, the Canal cannot depend on receiving this portion of the transit. The Lock at Port Dalhousie was erroneously placed at the entrance of the harbour at the commencement of the work, before steamboats were extended to their present enlarged dimensions. It is necessary, therefore, to remove this Lock about half a mile up the Bay, so as to admit steam vessels with ease and facility, and leave a large basin on the same level with the Lake. Mr. Nathan Pawling, who owns the property at this point, has offered to make the alteration for £2,500, and not obstruct the navigation.

- 2. Extending the outward piers at Port Colborne, Lake Erie, and erecting a light-house.
- 3. Extending the main pier at Grand River, 500 yards, as originally intended; and one 200 yards on the east side, which will make it the most spacious harbor on the Lake. These alterations and improvements may be made in due process of time, without interrupting the navigation, and will not in all exceed £12,500.

## ALTERATIONS

That may be effected hereafter.

A very great difference of opinion existed at the time the slips at the Deep Cut occurred, many contending that the plan of making the Rivers Niagara and Welland the feeders and summit should be adhered to, and the slips removed, be the expense what it may. Experience has since proved the alteration then adopted in taking a higher level was judicious in fact the Canal could not have been constructed without it. By referring to the Report of the Directors for 1828, it will be seen that the Deep Cut was excevated to the bottom of the level at both ends, and that only a small portion of earth remained in the centre, a distance of 40 chains; and that with the force then employed ten days or a fortnight would have removed it so as to have drawn the waters of the Welland through into Lake Ontario. The bottom of this part proving to be quicksand, slips occurred, which rendered it indispensably necessary to resort to a higher level, which is now attained from the Grand River.

The middle branch of the twelve, or Beaverdam Creek, commences at the north end of the Deep Cut, and forms a natural ravine, falling off 40 feet below the present surface of the water in the Deep Cut. The Board has reason to believe that, by cutting the embankments and letting the water rush under this head, it would remove the sand from the bottom and deposite it in the ravine below, leaving a sufficient

cavity for the clay to form its natural slope. The embankments can be replaced in the spring without damage to the Canal.

The Board considered it due to the former as well as present Directors of this Company, to take a brief review of their past transactions. It was not their intention to have entered into this explanation until after the work was fully and perfectly completed in every respect according to the alterations and improvements recommended, but recent occurrences have rendered it necessary.

In the first place, it will be remembered that when this undertaking was commenced, in 1824, no work of a similar nature had been attempted in the Province. The object then in view was making a small cut to draw the waters of the Chippawa into the Beaver Dam and Twelve-Mile Crecks; improving or widening the beds of those streams to Lake Ontario, and descending the mountain by a wooden railway. The summit of the Deep Cut was apparently a level swamp, from whence the waters gradually flowed, both into the Welland River and Twelve-Mile Creck. The depth of this cut was supposed to be incensiderable. At this period there was not a person to be obtained in Upper Canada who knew the use of a spirit level. In August, an engineer was procured from the State of New York, who surveyed, levelled, and reported thereon.

In January, 1824, an Act of Incorporation was obtained, a part of the stock subscribed, and the work commenced on the 30th November. At this time the subject began to attract public attention. The stockholders applied for an extension of capital, with a view of enlarging the Canal for ship navigation. Mr. M'Gillivray and others, of the Canada Company, having taken an active part, the Directors were under the impression that Company would cooperate most cordially in promoting the object, and that the stock would be taken up in Great Britain through their influence. During this year surveys were made by Messrs. Clowes, Hall, and Roberts, who reported thereon—the last being one of the principal engineers employed in constructing the Erie Canal, and a gentleman in whom great confidence was deservedly placed.

It was discovered during this year that the mountain could not be descended on the original route with a canal of the increased dimensions contemplated, without a combination of locks; to avoid which another route was selected, at a great additional expense.

In 1826, an Act was passed, authorising the deviation in the route, and granting a loan of £25,000 by the Provincial Legislature. This sum the Directors had reason to believe would be refunded by the stock expected to be subscribed in England. In this expectation they were disappointed; and to this cause the difficulties and embarrassments that attended the undertaking may be attributed.

A great part of the private stock had been paid in; the work was all under contract, and in a state of forwardness; the only alternative was to prosecute the work with vigour, and make every exertion to obtain subscriptions for stock, and such other aid as could be procured; or abandon the work now committed to their charge. The Directors, happily for the Province and all concerned, decided on the for-

mer. They applied for and obtained, through His Excellency Sir Peregrine Muitland, a grant of all the waste lands in the Cranberry Marsh; and employed David Thomas, one of the principal engincers on the Eric Canal, to take charge of the work.

In 1827, the Legislature of Upper Canada subscribed stock to the amount of £50,000, and the Legislature of Lower Canada £25,000; and His Majesty's Government granted £16,360 on certain conditions, which were complied with on behalf of the Company. This year, Mr. Alfred Barrett was appointed principal Engineer, having been, since the commencement of 1826, a resident Engineer.

At the close of this season the Directors had every reason to believe that the work could be accomplished by the end of the ensuing year, provided means were at their disposal; to obtain which, in 1828, they made an application to the Home Government for assistance, and obtained a loan of £50,000, payable in ten years, at four per cent. Subscriptions for stock to the amount of £30,000 were obtained at the same time from private individuals. Every part of the work was pressed forward with the greatest energy, and placed in readiness for the early navigation, of the ensuing year by the Niagara River; and up to the 9th of November they were in confident expectation that their views would be realised, when an end was put to their hopes by the slips in the Deep Cut. This casualty was attended with the most scrious and appalling consequences, which no energy or exertion could fully counteract. The most serious evil was the delay attending the new plan they were compelled to adopt.

Every exertion was made to bring the feeder from Bearfoot Rapids, or from some point up the Grand River of sufficient height to avoid erecting a dam across that stream; which, after repeated attempts, was found, by the most experienced Engincers, (Mr. Geddes as well as Mr. Barrett,) to be impracticable at any expense within the means of the Company to command. They mention this more particularly as an opinion prevailed that this survey was never made.

The best situation for building a dam across the Grand River was about half a mile from the mouth; where the ground was marked out, the work placed under contract, and about £400 expended; when, by the representations of Commodore Barrie, a stop was put to the work, and the Company were compelled to select another situation five miles up the river, and cut an entire new feeder that distance, at an additional expense to the Company of at least £10,000.

Notwithstanding these obstacles, and their attend ant delays in 1829, an entire canal or feeder, 27 miles in length, a dam, of no ordinary dimensions across the Grand River, an aqueduct over the Wel, land, and four locks at the Deep Cut, were constructed, and the water let in by the 5th of October-To forward the work the feeder was excavated one, half its intended width, to admit the water into the main canal, to prove the levels, and satisfy the public that the plan would answer the desired purpose, which was generally doubted at the time. A vessel was passed through from Lake Ontario to Erie in November of this year. Another effort was made during this season, in England, and a considerable sum subscribed by individuals.

In 1830, an application was made to the Legislature for a further grant of £25,000, to pay off the debts and widen the feeder. A commission was appointed by the Legislature this Session, whose report we subjoin (see Appendix A.)

The navigation of this season, by the Niagara River, was quite sufficient to show that impediments existed of so serious a nature as to induce the Directors to recommend the extension of the ship canal to Lake Erie, by a more direct route; which was most fully concurred in by the Commissioners appointed by the House of Assembly.

In 1831, an application was made to the Legislature for a grant of £200,000 to extend the Canal into Lake Erie, finish it in a durable manner, and enable them to pay off all demands against the Company. This measure was recommended by a Committee, and at one time adopted by the House; although subsequently altered to a loan of £50,000, under certain restrictions. This alteration is to be regretted, as it has failed to accomplish the desired object.

From various delays in exploring the different routes, the work was not put under contract until late in the season; and very little progress was made in it, from the heavy rains which prevailed during that year, and the peculiar situation of the route, which could not be drained until back ditches were formed nearly the whole extent of the cut; in consequence of which, together with the low price at which the work was taken, every contractor on the line, with one exception, failed to finish his work, which had to be re-let to other contractors.

During the past season (1832) the work was prosecuted with a degree of vigour and energy equal to any former period.

It is not the intention of the Board to discuss whether this work has been sustained with that degree of public spirit with which similar undertakings have been prosecuted in other countries; or whether the embarrassments they have had to contend against, from time to time, are not principally to be ascribed to that cause. By those who have had any practical experience in the construction of canals, or works of a similar description, an excess of expenditure over the original estimate is considered a matter of course; by those who have never given the subject much consideration, the causes are not so readily comprehended. In the different estimates alluded to, the culargement and extension of the Canal is generally kept out of view.

The first loan granted from the Legislature of this Province, of £25,000, was supposed to be repaid out of the stock which the Directors had reason to believe would have been subscribed in London. In this expectation, as already shewn, they were disappointed.

The Stock to the amount of £50,000 was subscribed, on condition that the Company would pay the interest until the Canal was finished; and this was supposed sufficient to get it in operation, and open the navigation by the Niagara river.

The casualities arising at the Deep Cut compelled the Board to resort to the Grand River for a supply of water, and protracted the completion of the Canal nearly two years. This cause of itself greatly

increased the expenditures, besides accumulating interest and depriving the Company of any income. The loan of £25,000 was for widening and increasing the dimensions of the feeder; and the last loan of £25,000 was for a new object,—the extension of the ship canal to Luke Erie by the shortest and most direct route, thereby avoiding the Niagara river altogether.

It may be asserted without fear of contradiction, that including all delays, casualities, and unavoidable expenses, few works, in any country, have been constructed at less cost. It is notorious that the work has been constructed in the cheapest manner and with a degree of economy perhaps never equalled by any similar undertaking; as one instance we will merely mention that the Eric Canal, with four feet water, cost, from Lake Eric to Lockport, before descending the meuntain ridge, a distance of 28 miles, \$1,600,000. The deep cut, for one mile and three-fourths, was from 30 to 56 feet deep, and cost one half of the amount of the whole canal from Welland to Ontario.

The Board has reason to regret, on account of the Stockholders, that the completion of the Canal has been prolonged so far beyond the period anticipated at the time the work was commenced, as well as the great increase of expenditure beyond what was then contemplated. They alone are the sufferers: to their enterprise and exertions are the provinces indebted for the undertaking; and in no way have they derived any advantage from the work; the actual dividend hereafter to be made is all they can look for. Notwithstanding, those most deeply concerned have only expressed a desire to see the full and perfect completion of the canal; having every confidence that when completed as it should be it will meet their most sanguine expectations.

The British Government, and the provinces of Upper and Lower Canada, have different views and interests, and are already gainers by the work, which every person having any pretension to financial affairs admit.

In the first place, with respect to the British Government.—They have expended a large sum in the construction of the Rideau Canal. The completion of the Welland is indispensable for the profitable use of that communication, by drawing a great share of the transit from the Southern and Western parts of the United States of America through it.

 $\Omega$ 5

Secondly, the Crown Lands held by Government. adjoining Lakes Erie, St. Clair, and Huron, have been enhanced in value by its construction, to an incalculable amount, besides the indirect advantages accruing to the shipping interest, and the increase of commerce to Quebec, Montreal, and Great Britain.

Thirdly, Government has the privilege of passing the canal free of toll, with all government vessels and stores, secured by an act of the Provincial Legislature, in 1827.

The above act was passed in consequence of receiving the following Despatch :-

"Downing Street, Sept. 30th 1823.

"Sir-

His Majesty's Government having granted the sum of twelve thousand pounds in aid of the expense of constructing the Lachine Canal in Lower Canada, upon condition that all boats and vessels with public stores should be permitted to pass without the payment of any toll or duty; and considering that the Welland Canal, now in progress on the Niagara frontier, will afford great facility in forwarding stores to Lake Eric and the upper parts of the Province of Upper Canada, and that by constructing the Locks of the width of twenty two feet, it would become a work of much greater public utility; I am to desire that you will acquaint the Directors that His Majesty's Government would be willing to afford the same degree of assistance towards the expense of the Welland Canal which was given to that of Larequired in its completion; and as the estimated expense of the Welland Canal is one hundred and forty seven thousand, two, hundred and forty pounds, the sum to be contributed by the public for the privilege of forwarding government stores &c., would be sixteen thousand three hundred and sixty pounds.

In the event of the Directors agreeing to this proposal, it is necessary that a Provincial Act should be passed in which the Company shall engage to construct the Locks of the Canal of the width of at least twenty two feet, and securing the use of the Canal to all vessels and boats the property of His Mujesty; and also to all other boats and vessels, when engaged in carrying Government stores, without the pay-ment of any duty or toll, in consideration of the sum of sixteen thousand three hundred and sixty pounds; to he paid in four equal annual instalments, or sooner if the Canal should be completed at an earlier period.

was the I have the honor to be, harmful for on to have

ooga g**Sir**yaaanitti Hasiita Your most obedient

Humble Servant. (Signed) BATHURST.

MAJOR GENERAL, SIR PEREGRINE MAITLAND, **K.C.B.** 

Besides the above advantages, the Government has been accessary, although with the best intention, to increasing the expenses of the Company, by compelling them to remove the dam at the Grand River. It was expected at the time that Government would make this Harbour, which would in part compensate them; but they have been under the necessity of constructing it since, at their own expense.

In 1828 the Company made an application to the British Government for assistance to finish the work.

The terms offered were a Loan of £50,000; payable in ten years, at four per cent; or a grant of £27,000, payable in four yearly instalments. Their necessity compelled them to accept the former; knowing the Canal would be useless until in operation, the Company have at all times made that a primary object, and have been compelled to accept any terms to accomplish it. However, now that the main object is effected, the Board entertain no doubt that His Majesty's Government will carry their original intention into effect, and place the Welland at least on as favorable a footing as the Lachine Canal, by still making a grant of one-ninth of the actual expenditure.

With respect to the Province of Upper Canada, although the capital invested in Stock and Loans amounts to £150,000, the Company have kept down the interest from time to time on both; so that the outley by the Province in payment of interest, is about \$15,000. The duties from the United States, and the one fourth from Lower Canada, on the increased consumption created or caused by the Canal since 1824, we assume from the best information we can obtain on the subject, at £2000 per annum, for eight years,—which amounts to £16000. The present increased and flourishing state of the revenue of Upper Canada, compared to 1828 or 1829, will fully corroborate the above assertion.

The Province of Lower Canada has three fourths of the revenue collected at the Port of Quebec, the increase of which has been very great for the last few years. few years.

In 1829, the value of imports, on which two and a half per cent was paid a-

mounted to..... 874,082 

Shewing an increase in one year of .... £ 316,754

rear Wille agrantee his for madility to the trade of an extension of the Million mary to Without entering into a detailed calculation on the subject, it is evident that the increase created by the Welland Canal is abundant to overpay the interest on the capital expended by the Legislature of that Province in its construction, besides the advantages from the transit, commission, profit on foreign commerce, shipping interest, and all those indirect though positive advantages which every Port acquires by drawing an excess of produce to it.

The population of the two Canadas is about 750,000. We assume one tenth for the increase of that portion influenced by the Welland Canal, which cannot be deemed overated, as the district of London alone contains 42,396.

If those advantages are already felt, what will they be ten years hence?—It is evident a much greater extent of country lies to the south and west of the Welland Canal than to the north; and if so, a greater quantity of produce must be brought through it for the Montreal market than reaches that market at the present time from that part of the country now situated below the canalisation to destinon

During the past season the Board were apprehensive they would not be able to pay all demands against them on the completion of the work and made a timely representation to His Majesty's Government to relinquish the mortgage they held on a part of the property belonging to the Welland Canal Company, consisting of the hydraulic works, and

a large tract of land lying on the margin of the canal. The subject was left to the decision of His Excellency Sir John Colborne, Lieutenant Governor, who promptly acceded to the application.

This property, which is considered by competent judges to be of far greater value than the sum required, they offered as security to the Legislature, in order to obtain a sufficient sum to enable them to pay off all demands against the Company, and finish the canal.

The subject was fully discussed, and the same favorable disposition was manifested by a majority of the House towards the undertaking which influenced their decisions on former occasions; at the same time they deemed it most judicious to appoint a commission consisting of three gentlemen from different parts of the province, with power to appoint an Engincer to examine the works, and make a general report to lay before the next Legislature; and in the mean time to put and keep the canal in repair for the present season, for which purpose £7,500 was placed at their disposal, leaving the security proferred at the disposal of the Board to liquidate the debts already incurred. Those commissioners have already examined and reported on the efficiency of the canal, which in their opinion, notwithstanding the late period when the work was commenced, will be open by the first of May next.

The Directors also presented a memorial to the Legislature of Lower Canada, early in the season, praying for a loan of £12,500 to enable them to finish the harbors at each termination of the canal, on sufficient scale to admit steam boats of the largest dimensions now navigating, or which may hereafter navigate those lakes, as shewn in the former part of this report.

They have seen a document published by a committee of the legislature of that province, signed by Austin Cuvillier, Esq., Chairman, stating in the first place that they had received no information whatever on the subject of the canal; but after examining the various Acts of the Legislature of this province, shewing the several sums borrowed, they are of opinion that it would be imprudent to grant the loan.

On this subject the Board would merely remark that Reports have been published each year on the progress of the work, and forwarded to each individual stockholder, besides being inserted in different papers; in addition to which they prevailed on William Berczy, Esq., M. P. P., a gentleman living in the Western District, who possesses the most extensive information respecting the country above it, as well as the situation of the Company's affairs, to go to Quebec two successive years, 1830 and 1831, for the express purpose of affording the Legislature every information on the subject of the canal.

The different acts of Parliament, amount of expenditure, and the Reports of Commissioners appointed by the Legislature of this province, are public records to which every member of the Legislature of Lower Canada has access. The Board therefore feel it due to themselves not to puss over in silence an imputation or censure for withholding information which they have spared no pains or expense to communicate.

It would further appear by that report the committee did not fail to avail themselves of the informa-

tion alluded to, as they recapitulate, with much precision, the amount of debts for which the Company are liable.

We have shewn in the preceding pages that the province of Lower Canada has benefitted by the construction of the canal in a pecuniary point of view. At the same time the Directors never could have entertained a doubt that the Legislature would be actuated by those considerations; neither do they think so now, had the question been brought fairly before them. The Directors conceived it necessary only to submit the following facts for their consideration.

The Welland Canal commences near the same point with the Erie Canal; the one intended to draw the produce and commerce of the southern and wester world to the New York market, the other to Montreal.

The general government of the United States have laid out annually large sams of money, and are continuing to do so, in the construction of harbors at every feasible point on the south side of Lake Erie. Not less than \$200,000 have been expended on the harbors of Buffalo and Black Rock alone, by which facilities the commerce of their country is increased, and they obtain a return in duty at the port of New York in proportion to this increase. Whereas, while we possess the most decided natural advantages, they are lost for want of public spirit to improve them; for we maintain that if Lower Canada would contribute a portion of her means to effect those objects, she would be immediately repaid by the increased revenue which those improvements would create; and while that province is receiving three fourths of the revenue procured by our exertion, where could we or should we apply with more confidence for assistance?

The public advantages arising from the canal are at this period so generally understood that a further allusion to them may appear unnecessary. As a proof however, we would merely notice that at Dunnville, Grand River dam, (a place which before the construction of the canal was a waste, or not inhabited,) there are three lumber mills, one flour, fulling, and carding mill, three merchant's shops, three store houses, and some thirty or forty dwelling houses; and the lands in the neighborhood, formerly valuless, are now selling at from \$4 to \$8 per acre.—A small village, with a grist and saw mill, is springing up at Marshville, another is laid out, and will form a prominent point at the junction.

Post Colborne has been retarded in consequence of the Company not getting a title to the land adjoining the harbor. As soon as this difficulty is disposed of, a number of individuals are ready to erect buildings; and from its favorable position, a large town will suddenly supply the place of a sunken morass wholly unfit for cultivation; but which has, by the operation of the canal been effectually drained and rendered valuable. About 30,000 acres of land has been likewise reclaimed in the townships of Humberstone, Wainfleet, and Moulton.

Port Robinson at the South, and Allanville at the north end of the deep cut have not increased as rapidly as the situations warrant, in consequence of a general belief that the deep cut will be lowered to the level of the Welland. A small village is com-

monced at the former; and a grist and lumber mill building, and one in operation at the latter.

Thorold is rapidly increasing. The largest grist mill in the province; four lumbering mills, and a large village, are crected, where it was quite a wilderness when the canal was commenced.

The value of lands in the neighborhood of the canal increase in proportion, so that it would be diffi-cult to estimate the extent of wealth created by its construction.

Further, the price of conveying a barrel of flour from Fort Erie to Queenston, 28 miles, around the falls of Niagara, was formerly 2s. 3d. It is now conveyed from Cleveland to Prescott, through Lake Erie, the Welland Canal, Lake Ontario, and 70 miles down the River St. Lawrence, in all 500 miles, for 2s. 2d. This proves beyond question that no mode of conveyance can successfully compete with the double voyage, made without transhipment; as well as the great gain the province derives by lessening the price of transportation generally.

From the most anthentic information, we have reason to believe the continuation of the Rideau Canal (now finished to the Ottawa River) to the Luchine Canal, will be completed during the present season. The report of the Ohio Canal Commissioners is now before us, and unnounces the completion of that work from Lake Erie to the Ohio River, 308 miles in length, besides the tributary feeders; which will give an uninterrupted water communication from the Mississippi to the Gulf of St. Lawrence.

These facilities for transportation; of themselves, warrant the belief of a great increase of transit. It is hoped the British Government will place such a discriminating duty on cotton and tobacco, when re-ceived in the ports of Great Britain, as will insure a fair proportion of the transit of those articles through our Canals from the southern and western parts of the

The increase of transit from the American side during the past season, under all the difficulties and delays attending the round about and tedious navigation of the Niagara River, was 100,000 bushels of

The increase of upward freight was principally in salt, which amounted to 35,000 barrels, about as much as reached Lake Erie by the Erie Canal three years ago.

Information from various quarters on the American side sanction the belief that a great increase may be expected the approaching season; but very little from the Canada side, as the continued emigration consumes the greater part of the surplus produce now raised.

### RECAPITULATION

From the preceding Report it will appear that the aspersions so frequently cast on the Directors of this Canal, are neither just nor reasonable. There has been no want of exertion or skill in conducting, nor economy in executing, this arduous undertaking. The increased expense and tedious delays proceeded from causes not within their power to control, nor were they accountable for the consequences.

The changes made in the line of Canal, its increased dimensions, alteration of the original plan, and the removal of the dam after the works had been in considerable progress, involved the Company in great additional expense and loss, for which no allow. ance has been made in public opinion.

The Stockholders alone, who have paid closer attention to the subject, view the undertaking in its true light, and are entitled to the consideration of the country for the sacrifices they have made, and for the spirited manner in which they have sustained the work: They have laid out of their capital for many years, and have sustained a positive loss; while the British Government, and the provinces of Upper and Lower Canada are positive gainers.

The losses, delays, disappointments, and embar-rassments, against which the Company have strug-gled since the extension of the Charter for ship navigation, and the failure in procuring the stock in England, can only be known to those Stockholders who have examined the subject, and the former Directors, who are entitled to all praise for their patriotism and perseverance. We would name them individually, but it is unnecessary; the public knows who are and who have been the undeviating supporters of the undertaking, and by whose exertions the present Directors have the satisfaction to announce to both hemispheres (for both are deeply interested). that vessels fit to navigate the Atlantic; of 120 to 150 tons, can pass freely from Lake Huron, Michigan, St. Clair, and Erie, to Prescott, embracing an extent exceeding 1000 miles; and on the completion of the ship Canal, which is now commenced on the St Lawrence, may continue their voyage to Great Britain, or any part of the world,

## MINUTES OF THE BOARD FOR 1832

Thursday, 2nd, Feb., 1832

At a meeting of the Board of Directors, held at St. Catherines. PRESENT

Alexander McDonell, Vice President. Robert Randul, and
Thomas Butler, Esquires. The minutes of the last meeting were read and confirmed.

Resolved, That all claims be paid up to this date, including salaries, &c., but no further payment be made out of the appropriation of £50,000, except for labor on Gravelly Bay route (and the necessary repairs on the Canal) until that work is completed, and that the officers of the Company be notified accordingly.

Mr. Washburn having written for payment of £29 5s., allowed by the committee in full of Trotter's claim submitted to them.

Resolved, That the Secretary inform Mr. Washburn that Mr. Trotter has no legal claim upon the Company, but that the Company have agreed to pay him that amount (which is over and above his estimate) as recommended by the Engineer, when they have funds.

Resolved, That the President execute a bond and debentures for the amount of £10,000 for Bank of United States, Buffalo.

March 1st, 1832.

At a meeting of the Board of Directors, held this day at St. Catharines,

#### PRESENT:

Alexander McDonell, Esq., Vice President,

R. Randal, and T. Butler, Esquires.

The mintes were read and confirmed.

The estimates and contingencies, amounting to £1957 18s. 2½d., approved and a draft signed by the Vice-President for the amount.

Mr. Orson Phelps' account as Collector at Dunnville, from 1st. to 11th. October, 1831,—ordered to be paid from the toll account.

A letter from the President enclosing one from Mr. Dickson, respecting claims of Indians, was read.

Resolved, That Mr. Dickson be written to and referred to the Act appointing arbitrators to examine such claims and award accordingly.

Also respecting J. Trotter's claim for which he has sued the Company.

Resolved, That Mr. Washburn be written to by Mr. McDonell on the subject.

Mr. Hotchkiss' letters respecting Hathaway's suit were submitted.

Resolved, That the Secretary prepare a copy of the act of incorporation, and also the last act of the Legislature respecting the Company as required, and proceed to York to obtain the Secretary of the Provinces' seal and certificate thereto, and also the Governor's certificate that such Secretary is duly authorised to annex the seal, &c.

Mr. William Mylne's letter respecting a bridge over the canal—read.

Revolved, That Mr. Mylne be informed that the consideration thereof is deferred until a full meeting of the Board.

April 5th, 1832.

At a meeting of the Board held this day,

#### PRESENT.

Alex. M'Donell, Vice-President. And Thomas Butler, Esq.

In consequence of no other members being present, the meeting was adjourned to Monday next, the 9th instant.

Ordered, That Mr. Warren and Mr. Randal be written to accordingly.

9th April, 1832.

At an adjourned meeting of the Board of Directors, held this day-

#### PRESENT:

Alexander M'D'Donell, Esq., Vice-President.
Thomas Butler, and
Robert Randal, Esquires.

No estimate being made for March, the Engineer's recommend an advance to Contractors of \$3940 = £985.

Resolved, That in addition to the printed regulations of last year, it is ordered that no saw mill will be permitted to run on the line of the Canal until proper racks or floors are constructed to prevent the saw dust from getting into the canal, and that 500 copies of the regulations be printed.

Resolved, That a suitable person be appeared pointed at Chippawa to attend the toll bridge and keep a record of all vessels, boats, and craft passing in and out, with their loading, and that he be paid the sum of six pounds ten shillings per month for his services, and that the agent have the power of appointing him.

Resolved, That a Collector be appointed at Dunnville, whose duty it shall be to collect toll, make an entry of every vessel, and their loading from Luke Erie—all lumber passing up and down the Grand River or Feeder, and all articles cleared to Port Dalhousie.

Espunged Resolved, That a Collector be appointed and sept. I at Port Robinson, whose duty it shall be to enter every vessel, boat, raft, or craft of any description, with their loading, passing either up or down the canal; also to examine the cargoes of all craft from Grand River.

That a Collector be likewise appointed at Port Dalhousie, whose duty it shall be to receive all tolls on upward freight.

Expunsed and September, 1833. That Returns from each Collector shall be made to the Welland Canal Office on or befor the 6th day of each month for the precading month, and on neglect or refusal to do so, the Secretary shall report the same to the Board, and his situation be considered vacant.

Expunsed and September, 1821. That each Collector shall be personally liable for the amount of toll collected, as no account will be kept by the Company.

That the undermentioned persons be appointed Collectors:—

For Grand River, Orson Phelps.

For Port Robinson, Robert Randal, Esquire.

For Port Dalhousie, George Smith.

Expunged 2nd { Resolved. That the compensation to Collectors shall be as follows:—

25 F cent. till it exceeds £ 100 F ann.
15 F cent. till it exceeds £ 500 F ann.
10 F cent, till it exceeds £1000 F ann.
7½ F cent. till it exceeds £1500 F ann.
5 F cent. till it exceeds £3000 F ann.

Say till it amounts to 10s W diem at Dalhousie and Robinson, and at Grand River to 5s. W diem.

Resolved, That the above be communicated to all parties by letter.

Resolved, That the packet-boats be sold on the 15th to the highest bidder.

Resolved, That the payment of £300 to the Bank on account of Lewis, Garrison & Little be advanced, and to other contractors on the new route at the discretion of the Engineer, to be deducted from next estimate.

THURSDAY, May 10, 1832.

At a meeting of the Board of Directors, held this day

PRESENT :

Alexander M'Donell, Esq., Vice-President.
Robert Raudal, and
Thomas Butler,

Esquires.

The minutes of the 5th and 9th April were read and confirmed.

Resolved, That the Vice-President's draft for the balance in the United States Bank, Buffalo, which was given on the 4th instant, for £2514 6s. 5d., 5e approved.

Resolved, That the remaining £10,000 debentures be prepared by the President and Secretary, ready to issue when required.

Resolved, That the following clause be added to the first Canal regulations, viz.:—All vessels, boats, or other craft, shall be subject to pay whatever damage they may cause by injuring the lock-gates, bridges, or any other erections, by carelessness or inattention, before leaving the Canal.

Joseph Burger's letter respecting the balance due him, as awarded for damages, &c., removing his house, amounting to £241 11s. 3d., besides interest, and offering to take £200 in full of all demands.

Resolved, That Joseph Burger's offer be accepted, and that the amount be drawn for on the Bank of Upper Canada accordingly.

The undermentioned potitions, deferred last Board, were again deferred to a fuller meeting, viz:—

William Mylne, for a bridge across the feeder.

Calbraith & Saxe, to make good loss on contract.

David Trotter, for work on feeder.

Mr. Boulton, respecting Oliver Phelps.

Wm. C. Johnson, for compensation.

Raymond Baby's application for \$6 rejected.

Lewis & Little's application for £300 approved of.

Resolved, That the contingent account for April, amounting to the sum of £26 6s., and Secretary's salary to 1st May—£50—be approved and paid.

Messrs. Bush & Shepherd, of Ogdensburgh, applied for a reduction of toll upwards similar to the merchants of the Oswego line, to which the latter object, as it would be placing the former on a better footing than themselves, to whom it was granted, with a view of drawing a portion of merchandize from New York Market on the Canal.

Resolved, That the Ogdensburgh merchants be placed on the same footing as the Oswego, provided they come into their line, otherwise no reduction to be allowed.

No bidders having offered for the packet-boats on the day appointed for the sale thereof,

Resolved. That they be repaired and sold.

Resolved, That the Collectors be authorized to receive drafts for toll at 30 days date until the 1st of August.

Resolved, That the toll be remitted on the packetboat to Dunnville, on condition of carrying officers belonging to the Company gratis, until next meeting of the Board.

Mr. Clark having been required, by minutes of the 4th November, 1831, to give security to the amount of £1000, on taking upon himself the office of Book-Keeper to the Company, submitted the following:—

Job Northrup and Charles Ingersoll, Esquires, as his securities.

Resolved, That the same be accepted of and that he enter upon this office accordingly.

May 31, 1832.

At a Meeting of the Directors, held this day at St. Catharines,

PRESENT:

The Hon. John H. Dunn, President.

Alexander McDonell, Esq., Vice President,
Robert Randal, and
Thomas Butler, Esquires.

Mr. Phelps' business was submitted to the Board, which was considered of too much consequence to receive any decision of the present meeting, and it is therefore referred to a future and full Board of Directors.—In the mean time the Engineer is desired to state most fully the whole of the particulars in relation to those Locks done under the Contract of Mr. Phelphs of which there appeared to be a variety of opinions as to the mode of construction and deviation from the model laid down for adoption according to contract.

William Calbraith's application to have made good the loss on enlarging Canal from Port RobinsonReferred to Engineers, who have reported thereon—it was approved and ordered to be paid.

Submitted to the Board-

Mr. Nathan Pawling offers to remove the Lock at Harbor and make a Steamboat Harbour for \$10,000 payable as follows—\$2500 this season, and the remainder when the Harbor is finished.

Deferred to a full Board.

By experience it appears the Locks can be repaired with stone cheaper than with wood.—It is probable that three Locks may require renewing this season or the beginning of the next—Quere,—Shall the stones be prepared and a Contract entered into for it?—It can be quarried on the new route and delivered at a moderate price if taken in time.

## Plan submitted herewith.

The cost of Lock tending is at present per month:

For Harbour	\$15	Carling Street
Davenport	80	A Section of the second
Vanderburgh	192	Taria Maria Makabatan
Compheil	20	
Campbell	20	a truma nii aytu. Taranii
artings it will the		\$327, or £81 15.

whereas, if the water could be left on lower lifts it would be done for £50 per month, besides their durability.

Postponed to a full Board.

Monson & Camp refuse to pay toll at Grand River, in consequence of which all other vessels follow their example—this should be decided.

Referred to the Attorney General.

June 6th, 1832.

At a Meeting of the Stockholders, held this day at St. Catharines, pursuant to Act of Parliament.

### PRESENT:

J. B. Yates, Esquire,
A. M'Donell, Esquire,
W. H. Merritt, Esquire, and
Captain Creighton.

The ballot being taken and closed, the undermentioned were declared duly elected, viz:

The Hon. John Henry Dunn,
Alexander Yates McDonell, Esquire,
Thomas Butler, Esquire,
Captain Ogden Creighton,
George Keefer, Esquire.

The Directors present then proceeded to the choice of President and Vice President, when the Hon. John Henry Dnnn was chosen President, and Alexander Yates McDonell Esq., Vice President.

June 2nd, 1832.

At a Meeting of the Board of Directors, held at this place,

### PRESENT :

Alexander Y. McDonell, Esq. Vice President.
Thomas Butler, Esquire,
Captain Creighton,
John Warren, Esquire, and
Robert Randal, Esquire.

The minutes were read and confirmed,

Mr. Phelps' application was further deferred.

Nathan Pawlings' application to remove the Lock at Port Dalhousie was rejected.

James Sloan's letter of the 28th ultimo was read. Mr. Merritt is requested to answer the same.

The alteration of tolls was considered, and A. Bronson's letter read.

Resolved. That the toll on merchandize up be and sept. iss. reduced to one dollar per ton on merchandisc, and 3 cents per barrel on salt.

The Board having ordered an advance of the 5th of April of £1037 10, and also £317 18 3 on the 31st May—Resolved. That the same be estimated with the addition of £200, making a total of £1554 18 3, and that the Vice President draw on the United States Bank for the amount.

Marr having offered to sell his Farm through which the Canal passes for £450—£250 to be paid on execution of the Deed, and £200 in one year thereafter.

Resolved, That the same be complied with.

Resolved, That from henceforth the Board of Directors hold their meetings on the first Wednesday in each month at ten o'clock A. M.

Whereas it is requisite for the convenience of the Company that the Solicitor should reside near the place of ordinary meetings of the Board, therefore

Resolved, That Alexander Y. McDonell, Esquire, be appointed Solicitor for the Company.

Resolved, That upon the application of Mr. Phelps the mortgage on his property held by the Company be given up to him.

The line of the canal having been covered with water in consequence of the mill dam of Calvin Cook, of Humberstone, the following letters were addressed to him on the subject:

St. Catharines, 13th Oct., 1832.

MR. Cook,

Mr. Rob says that you ask \$300 per year rent for your mills—rather than have any further trouble I will recommend the Board to accept of it, and if they do not, I will pay you \$5 per diem for the time they remain idle

(Signed) W. H. MERRITT.

November 25th, 1832.

I am directed by Mr. Merritt to give you notice that you can raise your dam as soon as you please, as he is of opinion that the keeping it down will be of no further service.

ALFRED BARRETT,

Engineer.

It appears that Mr. Merritt called on Mr. Cook with Mr. Barrett after this for the purpose of raising the water, with a view of making use of it for the Company's benefit, in case the raising should injure the work—Mr. Cook refused to give up the mills, and has since refused to heighten the dam, although materially injuring the work, and now doing damage at the rate of five dollars per day—when it was—

Resolved, That Mr. Merritt's agreement of the 13th Oct., to pay Mr. Cook £75 per annum, or \$300, for the rent of his mill be confirmed, and that Mr. Merritt be requested to get possession of said mill and arrange with Mr. Cook for the rent and income of the same according to his agreement.

Mr. Cook having agreed to take at the rate of \$300 per annum for the above,

Resolved, That Mr. Cook be paid from 15th October to 6th December, 1831, the sum of \$42.

Resolved, That from thenceforth no estimate be made on the Gravelly Bay route until that work is completed, and that a committee be appointed to ascertain in the mean time the amounts necessary to be advanced to the contractors, to examine into the state and progress of the work from time to time, and to receive and accept proposals with the view of completing the work by the 1st of August—the committee to consist of the following gentlemen:

Alex. Y. McDonell, Esq., Vive-President. Robert Randal, Esquire, and Captain Creigton.

June 12th, 1832.

The Committee appointed by the Board, viz: Alexander Y. McDonell, Esq., and Captain Creighton, met at Gravelly Bay on Monday the 11th, examined the line of the canul as far as Ramie's bridge, accompanied by the Agent and various contractors, who were requested to examine the work and give in their proposals to complete it by the 1st of August.

The first object was the lock at Gravelly Bay, the foundation of which was not yet laid out, and but few hands employed; much difficulty appearing to exist in obtaining proposals, it was agreed between the Committee and Mr. Little, by an instrument in writing, that Marshall Lewis, the superintendent, shall have the whole management in building the said lock, both as to furnishing surplus materials, payment of men, and every direction respecting it; that the estimate on said lock be paid into the hands of Mr. Slate, the Clerk in Mr. Little's store—subject to the order of said M. Lewis, on this particular work only, until the lock is finished, when the surplus estimate, if any, shall be paid to Mr. Little, the Contractor.

The next work which appears most backward, and as such requires a greater number of men in a given time, is the rock excavation under contract to Lewis, Little & Co.

The only proposal which could be obtained for this work was from John Pascol, 4s. 4½d. per yard, and to have the water kept off from the present face this side of horse pump three chains this way.

Mr. Little having offered to give up the half of the rock excavation, and pay Mr. Pascol 4s. 4½d., and find him the use of a horse and pump, the Committee recommend paying him 3½d. per yard more out of the funds of the Company in order to complet the work by the time specified, viz:—Ist. Aug., next.

The third object was Section 14, abandoned by Hixson & Calbreath.

John Donaldson proposed to finish the work by 1st September, at 13 cents per yard, and the one fourth to be paid him which was retained from the former contractor.

John Boyle, 1 station at 14 cents, to be finished by the 1st of August.

Jacob Upper, half the section at 14 cents, to be finished by the 1st of August.

S. Hannah, — station at 12 cents, and the water pumped.

John Donaldson was again called in and requested to propose for finishing by the 1st of August, he accordingly offered to complete the section at 15 cents.

The Committee finally agreed with him at 14 cents, and he to have the use of the horse pump now erected by Calbreath.

Thursday, August 2, 1832.

At a meeting of the Board of Directors, held this day.

### PRESENT:

Alex. Y. McDonell, Esq, Vice President,
George Keefer, and
Robert Randal,

Esquires.

The minutes of the former meeting were read and confirmed.

Resolved, That the alterations and arrangements made by the Committee at Gravelly Bay be approved of.

Whereas it appears by the devastation made by the cholera at the Rock job the work is now abandoned, and unless the disease shortly disappears the work cannot be finished this year in time for the fall navigation; and whereas great difficulty and risque attends the present prosecution of the work on the said job as arranged by the Committee.

Resolved, That Messrs. Garrison and Little's proposal to relinquish that part of the work be accepted inasmuch as that it be notified that proposals will be received at the Canal Office on the first day of Sept. next, for the rock excavation at or near Gravelly Bay—the material now on the work to be taken at a valuation, a schedule of which will be furnished by Messrs. Garrison and Little; but that Messrs. Garrison & Little continue in possession of the work until it is so relet, and no responsibility to be incurred by the Company respecting it. The Board will, however, allow Messrs. Garrison & Little one dollar a yard for all taken out since the last estimate by Mr. Keefer.

Absalom Shade Esq. having applied to the Board on the 10th May for damages or remission of toll on

passing his property through the Welland Canal, which was rejected but not communicated to him, and whereas A. Shade Esq. wrote officially to the Board on the 4th June last presenting a detailed account of his damages, which was not laid before the Board in consequence of there not being a regular meeting at the time appointed from the indisposition of the President—and as it appears a writ has been issued for the recovery of the toll due without his being regularly notified from this Board.

Resolved. That the Solicitor be requested to informi Mr. Shade that in consequence of a reply not having been communicated to him before an action was commenced the Board will defray allocosts incurred on their part, and withdraw the suit in case Mr. Shade will pay the amount of tolls.

Agent for 1831 that the return of the Forwarding Agent for 1831 that the sum of £582 0s. 03d. accounts in favor of the Welland Canal Company remain unpaid.

Resolved. That the said accounts be put in the hands of the Solicitor with directions to write each a direction requesting payment within three months, and if not paid to institute an action against those from whom, in the opinion of the Forwarding Agent the domand can be recovered.

On a petition from sundry ship owners it was

Resolved. That the Collectors of Port Robinson and Port Dalhousie be requested to furnish the captains and owners of vessels with a certificate specifying such vessels as were in the canal on the failure of the water in July, and the amount of the vessel socialmed paid, for which amount each vessel is to receive credit on her future tolls.

David Trotter's application was submitted and deferred for Mr. Barrett's report thereon.

Captain Sloan's application was submitted.

Resolved. That Mr. Sloan he informed that owing to there not being a full Board his application could not be decided upon at this time.

Upon Messrs J. Strowbridge & Co's application-

Resolved. That they be informed that the tolls will be remitted on the vessel's present cargo, as per the resolution of this day—but no expenses to be paid.

Resolved. That Mr. Clark be authorised to accept orders from the contractors for amount of work done which is to be finished by the Engineer, and to give a due bill in behalf of the company for the same payable the ensuing estimate.

The fullure of the water in the canal at this time materially calls the attention of the Board to that subject.

It is therefore wantering a want to be O at W .

officed. That a committee be appointed to examine the dam and to obtain written information from practical men, and shose persons situated at or near the feeder from thence down to the ship canal, the Deep Cut, and all other parts of the canal as may require examination and alteration.

Resolved, That Messrs. Alexander McDonell, George Keefen Robert Randall, William H. Merritt, John Warren, and Marshall Lewis, do compose

said committee, and that they examine and report on the same, and affithey deem it expedient, make an agreement with Mr. McDonell to finish the repairs on the dam and excavation of the faeder forthwith.

The Board then adjourned to meet at Port Robinson on the 8th August 1832.

Ata meeting of the Board of Directors of the Welland Canal Company, held at the Canal Office on the 1st. September called by the Agent for the purpose of determining on the proposals for tre-letting the Rock job and the Present and the Present and the Present and the Present and the Present and the Present and the Present and the Present and the Present and the Present and the Present and the Present and the Present and the Present and the Present and the Present and the Present and the Present and the Present and the Present and the Present and the Present and the Present and the Present and the Present and the Present and the Present and the Present and the Present and the Present and the Present and the Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present and Present an

Alexander McDonell, Esq. Vice President.

Robert Randal, and Esquires. Thomas Butler,

Whereas, It appears by the minutes of August the 2nd a re-letting of the Rock job taken by Messrs. Garrison and Lewis was determined on and notices were circulated for receiving proposals this day the following were opened in presence of the Board, viz.

Price and Kennedy on their job ... 11s. 6d. Y.C.y John Donaldson for the whole .. 31 31 fr. John A. Benjamin, Section 3. . . . . 9s. 6d. Y.C.y

After examining the proposals, and taking the subject into: consideration, the Board unanimously agree that the best proposal is from John Donaldson it being the least of any responsible man offering:

it being the least of any responsible man offering.

It appears by the minutes in August, that from the devastation, committed by the Cholera the Board were then of opinion the work could not be finished the present season, but from what has been since done, and from the report of the Agent and Engineer of the quantity of rockiremaining the Board think it judicious to renew their exertions and make arrangements to finish the Canal to admit the passage of one vessel at least, if possible the present season.

The Contracts are to be drawn so as to have the whole completed by the first of November nexts.

Mr. Upper appeared before the Board and stated that in consequence of the unforeseen quantity of water arising on his job that a wall have all the

This will add £50 to the expense of the work in case it, should appear satisfactory to the Board that it has cost that sum in addition to the original Contract.

Mer Obrig randounding to the appropriate and the appropriate of the toward are arrived or the forest and the arrived are arrived to the frequence and the gain during the process range.

The Board met at Niagara on Wednesday the 5th Septr., in consequence of some of the Members being on the Grand Jury for the Assizes.

Alexander McDonell, Esq. Vice President and George Keefer,

Thomas Butler, and Surespott mineral)

Minutes, of former, Board, were read and approved of.

 $S_5$ 

The Report of the Committee appointed to examine the line of the Canal was read and approved of. Resolved,

1st, That on the close of the navigation, which is supposed will be on or about the 1st of December, the Agent be authorised to employ some competent person to open the flume at Hall Davis' and secure it. The embankment at Thomas Merritt's mill and have a substantial flume erected therein, and to take such other steps as may be deemed advisable to lower and widen the slips at the Deep Cut-and to keep the water running through the same at least one month—and that public notice be given of their

2nd. That notice be immediately given for receiving proposals for deepening the feeder from the Ship Canal to Broad Creek on or before the 1st of January next—that the Engineer make, out an estimate of the same and leave a diagram and specification in the Canal Office, the work to be commenced by the 1st of February, and finished by the 1st of April next. I Note Lets. a na gM far am 1

3rd. The Agent is requested to give notice, advertise for, and procure the delivery of stone at the Locks to make the necessary repairs next winter.

4th. The subject of the Lock and Harbor at Gravelly Bay having been taken into consideration, Resolved, That as there is no prospect of Messrs. Guirison and Little finishing the Lock and Harbour, in time, and as the Engineer reports that there is not a sufficient force on to complete it.

Ordered, That the same be relet on the 14th inst., and that Captain Creighton, Messrs. Keefer, Randal and Butler, meet at the Canal Office to receive proposals for the same, notices to be put up immediately.

... 5th. The Harbour at Grand River.—The Board feel the importance of extending the piers and deepening the channel, but will suspend any further operation until after the meeting of the Legislature

6th. Captain McMillan, Schooner Mary Anne, toll on cargo upwards when detained in Canal amounted to £426 or about—the coll downwards being much more, the Cantain requires further compensationwhich was rejected.

7th. Ordered, That a draft be made out for the balance now in the United States Bank, 1995

Sth. Ordered; That all accounts be adjusted and settled during the present month, the real many and in

9th. Ordered, That the tolls now in the hand of Mr. Clark, amounting to £--- be appropriated for the use of the work on the written order of the Engineer and Agent during the present month-

10th. Ordered, That a statement of all balances due the Contractors be submitted to the Board on the-inst., and a statement from the Engineer, shewing amounts that will be due after the new route is completed-when a Board will assemble at the Canal Office to investigate the same.

Captain Dockstader's letter was submitted, and was referred to the Agent

Ordered, That a contract be made out, and the work proceeded in immediately.

and I hadied Cods again 18th November, 11832. he

At a meeting of the Board held at the Parliament Buildings, in the town of York and the second room P.R.E.S.BIN T Deport of the Landing

The Hon. John H. Dunn, President, the source Robert Randal,
George Keefer, and edd Land Thomas Butler, Esquires. Thomas Butler,

The first subject which occupied the attention of the Board was obtaining money to discharge the laborers now about completing the work, and that an application be made to the Bank of U. C. for a loan.

The Board solicits the particular attention of the President to this subject, and if the Bank Directors are not satisfied with the security of the Company and repayment out of the tells—that the President be authorised to propose them further collateral security on landed estate, as the necessities of the Company at this time are urgent.

2nd. Resolved, That the perition to the Legislature of Lower Canada for a lown be adopted.

3rd. That the draft of a letter No. 3; to sundry communications—a copy of which is to be filed in the office be adopted. The street will assume at the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of the street of

4th. That the application from Mr. Decow being considered, the following reply be approved of:

York, 14th November, 1832

Sin, or an in month of or or probable is disable to Your communication respecting claims for damages has been laid before the Board of Directors, and I am requested by them to say that the award already; made shall be paid out of the first, money coming in two and troughers then be a selected as the relation

That with respect to obtaining land in compensation for further damages the Board can give no assurance at the present time; they are extremely desirous to satisfy you, and will do every thing in their power to accomplish that object; an application has already been made at the Crown Office, from whence reference has been made to the Government Office, and an answer may be expected during the present week on the subject.

# WELLAND CANAL PETITION.

The Committee to whom was referred the Petition of the President and Directors of the Welland Canal Company, praying for certain alterations in the laws relative to said Company; and also praying for such other aid, by way of loan, as, on example of the company of the company of the company in the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of ination, may be deemed sufficient to enable the said Company to complete the Canal to that point on Lake Erie most advantageously situated for the formation of a harbour—respectfully Report:

That your Committee have examined and considered the various matters referred to them, and they feel great satisfaction in being enabled to state that this work, so important to the commercial interests of the Province, has been so fur completed that a communication for vessels from Lake Ontario to Lake Erice is now opened by way of the Niagara River. Although this fund cannot be so advantage ous to the Province, or to the Company, as the onecontemplated by an extension of the Canal to a port on Luke Eric, yet it has already drawn so much at tention and proved the utility of the connexion bel tween the lakes so fully, that the necessity of a thorough completion of the work is, in the opinion of your Committee, a matter no longer to be doubted. In order, however, to effect this object, a considerable expenditure remains to be incurred and it appears, from the Report of the Board of Direct ors, that the available funds of the Company havebeen absorbed by the engagements of the last scason. Your Committee, fully aware that it is decidedly opposed to the interest of the Province to confine the Company to the one channel by the way of Niagara River, now completed, have had under their serious and deliberate consideration the manner in which the Company should be aided or idoh add

The estimates of the expenditure for the different outes differ materially, and there are various opinions in relation to the advantages of each. The amount of expenditure, within any reasonable bounds, is not so important as that the most advantageous harbour should be selected. The interest of the Province and the stockholders being the same, no better prospect of a judicious decision can be obtained when he is the contract of the prospect of a judicious decision can be obtained when he is the contract of the prospect of a judicious decision can be obtained when he is the contract of the prospect of the prospect of a judicious decision can be obtained when he is the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of the prospect of be obtained, than by leaving it to the determination of the Directors; themselves; the larger sum, there: fore, that may be required, for this purpose, should be provided. ....... or finitelities or an environmentally

There are, however, considerations of an important nature which have induced your Committee to propose an entire variation lin the manner of making the loan to the Company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the company of the compa

From the present debt due from the Company to the Province, there is no other security than such as shall remain after the debt to the British Government shall have been paid. The Company have already discovered that the prior lies upon the Ganal and the content of the company have already discovered that the prior lies upon the Ganal and the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the conten and its tolls has prevented their negociating a loan on their own responsibility, without providing for

the payment of that debt. It has been presented for the consideration of the Committee, that the Province, instead of affording specific aid for the particular object merely by borrowing on its own credit, and loaning the precise sum required, should adopt a measure that would prevent a pledge of its income, and enable the Company to restore to the Province the security which it ought to hold, either for the money louned, or responsibility assumed. In doing this, the Committee have also considered what sums might possibly be required by the Company, in order to produce an advantageous and profitable use of the Canal. As the Province will, in the event of the recommendation being adopted, be the sole creditor of the Company, and hold a lien upon the Canal, which shall prevent the Company ever looking to any other quarter, it is necessary that, in the arrangement, a sum should be provided for within the bounds of perfect safety to the Province, and sufficient for all the exigencies of the Company.

Your Committee, therefore, propose that authority shall be given for the issue of the debentures of the Province for £200,000, in sums not less than £200 each, to the President and Directors of the Welland Canal Company, bearing an interest at the of rate 5 per cent. per annum, payable half yearly in London, the principal to be paid in 25 years in the same place; and that the said debentures be not issued to the said Company until security shall have been duly given for the punctual payment of the interest and principal of these debentures, as your Committee have particularly provided for in the bill which they have prepared. The Committee have been governed, in naming this sum, more by the conviction that the security which will be given is abundantly sufficient for the Province, than by any opinion that this whole amount will necessarily be used by the Company.

The result of the examination they have given this branch of the subject, enables them to state the following as as the probable situation of the Company, subsequent to this arrangement.

The debtto the Imperial government, £55,555 10 0 The debt to the Province, ..... 50,000 0 0

Expenses of extending the Canal to Lake Erie, including harbor and

50,000 0 0 contingent expenses, say ...... Provision to be made for one year's

interest on the £200,000 in ad-

m. The amount of balance thus, left will not be more than may be required to enable the Company to give the requisite aid to forwarding, by being prepared to pass vessels and bonts with the necessary despatch.

This statement is exhibited to show what may be required afrom the Company, and that the sum of £200,000 currency, is not too large to put under their command. Should the Imperial government do what may reasonably be expected, the Company will then be enabled to retire the amount they shall allow under their former contract to pay a part of the debt incurred by this engagement.

... The Committee have had presented to them correspondence and other information that give assurance of immediate business on the Canal, at least sufficient to pay the interest on the whole debt.

They feel thereford confident that whe province; by making this arrangement; will be in a better situation than it now, is, and the operations of the Commust embarrass their proceedings, subject them to exactions, otherwise to be avoided, and renden aldesirable result doubtful which may thus be made cer-The Committee have bestowed upon this branch of the application much attention, and have treated it more fully, owing to its great, importance. The other objects embraced in the petition of the Directors they have also examined, and are of opinthat the prayer of the petition in relation to them, ought to be granted.

The difficulty which has occurred, in some few in stances, with regard to compensation to owners of property, ought to be provided for so far as Legislative enactment will conduce to that object. A clause has therefore been added with a view to remedy the inconvenience complained of.

The Company will also, if the aid recommended by the Committee shall be afforded by the Legislature, be released from pecuniary embarrassment, and enabled promptly to pay to individuals the amount of damages assessed, which heretofore they could not do for want of means. A was saved as head.

The Committee have prepared a bill to meet these various objects; which they beg leave to present with this report.

All of which is respectfully submitted, man is sugar to true with it BOURTON, made

in exclusion of and the proposition of the A concise view of the inland navigation of the Canadian Provinces; the improvements, already effected, and the inferences to be drawn from their full and practical accomplishment and practical value. 11832 6 30, 14000 in he stat and the life is allow

The present moment is an important crisis to these provinces; and to Upper Canada it is more especially so. The prosperity and progress; the rank and relative importance, of this great division of North America, depend upon the intelligence and decision with which the capabilities of UPPER CANADA are appreciated and pursued. Not only our immediate interests and our relief from an immense commercial burthen, will be insured by a due regard to these; but our future claims as a well informed community, honorably ambilious of the wealth and influence exclusively held forth to us, are pending upon our exertions Our interests are now brought so clearly within the most accurate estimate, that it only requires a general; and I should add obligatory, attention, in order to rouse provincial enterprise and to inspire the people of Upper Canada with the highest confidence in their own energies and resources."

To avail ourselves of the advantages placed within our power, the province is now called by every motive which should influence an intelligent and encorprising country, capable of estimating the indirect burthens which weigh so heavily on it, and the means of removing them, when so bountfully pressed upon our acceptance by the natural position of the province. It was said by a German traveller in America some years ago, that the settlers often paid more commercial taxes through their storekeepers than the subjects of the most despotic governments did to their rulers.

Many persons, from contracted and erroneous conceptions, may perhaps imagine that we have already attained the whole, or a sufficient measure of the objects of improved inland navigation.

I am far from wishing to underrate those highly beneficial works which have been accomplished; they are valuable and important in themselves and honorable to a young and rising country like ours; and those effected by the British government are eminent proofs of its liberality and favor. But I estimate them from more extended considerations.

The human mind is ever in advance of the means of realising its views, of attaining the consequences of its discoveries, or accomplishing its projects, however conclusive the force and accuracy of its arguments. Hence it is that the first proposers and promoters of great and beneficial undertakings are almost universally compelled by prudence from offering to the world their original and conclusive persuasions. These they are obliged to relinquish partially, lest proposing and promising too much, their projects might be rejected as chimerical and wild. They are thus led to compromise their own decisions and judgment to promulgate what they believe will be accredited, and to ask what they trust will not be refused. They bring their speculations to the level of the existing ideas, and the probable enterprise of the country.

As this seems something of a final law in our nature, it is needless to linger on its provisions, either to reason or regret.—So far it fulfils, and we cannot doubt but in the most beneficial manner, the end in view. It has effected the commencement of good. The works already finished or in progress have engaged us in the grand emulative strife of internal improvement; they have made us feel our strength; they have brought victory and unlimited success within our grasp. When the level of public opinion is raised, we may then speak in the language of fact and demonstration, without being suspected of visionary or perhaps designing extravagancies.

Nor will the candid and liberal mind construe these aggrandizing and extending schemes of public benefit and interest, into a changeable and erroneous incompetence, when the causes of this seeming inconsistency are rendered so obvious and undeniable, and brought home to the understanding of every man. Let the public at large then, and those whose habits of inquiry have led them to anticipate general opinion, alike forget this no doubt wise law of our progressive faculty—Let us rejoice we have passed through the first stage of improvement, and that we are prepared to take our highest degrees in the school of experience.

From the imperfect and irregular information which has been from time to time communicated to

the public of Upper Canada, a very incorrect and insufficient estimate is generally entertained on the extent of those indirect burthens which we sustain from not possessing an uniform, adequate, speedy, and consequently cheap internal communication with the seaboard; by which the rate of transport would be diminished on our exponted produce and imported wants. These facts, as I shall make appear, admit of such incontestible proofs, and their amount is so formidable, that these alone, were the incitements to advance our prosperity laid aside, should be enough to unite the province in zealous' co-operation towards its attainment. Every man who knows the loss of time, the injury, accidents and expense he suffers by the length and badness of his market town road may by comparison infer the accumulated, increase of expense which now oppresses our com-merce and produce. The enlargement and completion of the line of communication, in progress or projected on a scale suitable to the wants; prospects, and resources of the provinces, and placed under an uniform system of well calculated regulations, becomes the universal and paramount interest of every settler in the province.

As it is my purpose to offer merely a brief and plain view of the improvements now more or less. effected; their present practical value and influence; together with the extended and unclouded prospect of what remains to be done; of what is, indeed, forced upon our perception, and commands our attention, I shall not allow myself to be led aside by attractive and distant speculations, however naturally they may intrude on the minds of those who have given any commensurate application to these subjects in their more remote consequences: Most of those who have addressed the public have perhaps erred in this. It cannot indeed excite surprise; yet I think the realities within our immediate reach and reckoning, if we will bestow on them due consideration, are quite adequate to employ hoth our practical and speculative faculties. Every one knows the immense, and in common parlance, unlimited regions, of which our lakes are the centre and market way. The scale of everything here is indeed great-great in extent and magnificent in its proportions. The progress of these territories has been no less remarkable, and the prospective rate of their advance, is in accordance with the grandeur of their lineaments.

We possess in Canada, an undoubted and pre-eminent superiority in controlling and directing the productive industry and growing wealth of the western territories. This we may claim without any invidious encroachment on the joint pretensions of our neighbors. The variety of the projects, and the combination of efforts, which they are now making, while it does infinite credit to their untiring enterprise, plainly proves that the master key of the Lake regions is not theirs, that while they are seeking by schemes at an exhorbitant expense, to until the Gordian knot, the triumph is reserved for us; and that we have only to fulfil the conditions of the prediction by one decisive and shear cuts So long ago as the time of Washington, our superior natural claims had been scrutinized; and in one of the letters of that distinguished individual, (written in 1788) Premark, that in speaking of the projects which even then began to engage speculative men on internal navigation; he uses the expression, "if we mean to aim at

 $T_5$ 

the trade of the Lakes;" and adds, "I think we should open all the rivers, and lay them open and free to all."

Such indeed are the extraordinary prospects of the country, in question in extent and value, that the Americans, with the knowledge of the odds against them, have been, and now are, vigorously acting and calculating on the share they can carry off in the partition of these advantages. Perhaps too they reckon something on our comparative supineness. In the first we wish them good luck; but in the last we most assuredly will only look the more vigilantly to our baskets and our own stores, to our obligations to our posterity and to our country. To this we are led with increased confidence and alacrity by the assurance that we hold the vantage ground; that in opposition to their desultory and difficult projects we have to oppose the unalterable superiority inherently belonging to the Provinces by the possession of the St. Lawrence. We may with confidence make claim not only to our full lot and share in this amicable contention, but to that surplusage which will become the reward of natural superiority, united with active measures. Our assurances are crowned by our forming a favored portion of the empire, advancing under the auspices of England, and aided by her wealth and connexion; by holding a free and direct intercourse with the unequalled productions of her skill and industry, and her yearly augmenting demand for all our produce. With this plenitude of circumstances in our favor, all that remains is to open the channel in which they are to flow. require but our own decision to commence this noble scene of mutual benefits, and to draw into our inland seas and the deep and fertile bosom of teeming and luxuriant regions,

"All the tide of wealth,
That swells upon the high shore of the world."

The division of the Canadas into two Provinces has created a false and unnatural idea that there may exist in these disunited portions some separate or opposing interests. Politics do not form the channel in which my speculations run; but I may remark that power and the feelings it may create have some unfavourable effects on the best minds. Legislative bodies begin to enjoy it as the miser does his goldas a reality and blessing in itself, not for its uses to human good. I shall but summarily observe on this point that this division was made at a time of extreme political embarrassment and agitation when the benefits and blessings of peace appeared suspended for an indeterminate period. Government legislated for the feelings of a loyal and respectable section of the empire, and I am not disposed to any inquisitive scrutiny into those favorable circumstances which were or may be supposed attendant on the arrangement. By this division however, and the line of demarkation fixed upon, Upper Canada was cut off from the co-equal claim she possessed to remain a maritime Province. The Legislative and provisional agreement adopted to remedy this political error has been partially and temporarily satisfactory: but the period has more than arrived when Upper Canada is entitled to reclaim her birth right-a free and unshackled egress and ingress with the Atlantic. By what final Act of the Provincial or Imperial Governments the injurious oversight is to be radically. removed I shall not stay to suppose, or whether a

commercial union, as regards this common interest. may be formed. But the time is past when doubt and uncertainty can be longer indulged. We know that it is from the Western territories of Canada-that riches are to descend, like the rains of Upper Egypt, to cover the interjacent Province with vigor, beauty, and opulence. Lower Canada must know this, nor can we suspect her of being too proud to receive the benefits of neighbourhood, and the overflowing bounties of a favored land .- Still less will we imagine that she would litigiously seek to dwell on the letter of the law, or "clothed with a little brief authority" to retain a vexatious power "which not enriches her," and which, could she by any miracle accomplishint, would "make us poor indeed." It is the desire and guiding principle of that great country of which we form no unrespected portion, to maritimize, if I may use the expression, her whole empire. Commerce and improvement are the basis of her dominion, and must ever continue the principles of its preservation.

As the views and estimates which I am about to lay before the people will, I believe, contain evidence that the system and scale of improvements to which they refer, will in their progress be relieving the burthens of our commerce, and at the same time almost from the negotiation of the requisite Loan, commence to meet the interest, and with accelerating advance enter on the redeeming the principal, I shall but passingly allude to the somewhat strange scrupulosity in regard to what must be a temporary and self liquidating debt! As if we, in accomplishing a great work, fundamental, and indispensable to our prosperity, were not in fact leaving to posterity a magnificient legacy, for the neglecting of which we should most certainly obtain a very liberal share of their animadversions and disrespect

I have thus attempted, in a general manner, to re-call the chief interests and impediments with which our prospects are likely to interfere; the efforts of the United States; our connexion with the lower Province; and our endeavours, as liable to a distrust in our own internal ways and means, and some partial and inconsiderable opposition. The accomplishment of what remains to be done must appear to every candid and intelligent mind the true and all engrossing interest of Upper Canada. It has nothing of a local or dubious character, which talents and perseverance may sometimes render specious and attractive. It concerns one great, obvious and practicable common interest—a system of inland commu-nication affecting the whole Provinces, on which all future combined or individual enterprises must depend, and without which all other exertions, works, or speculations are but the scattered and lifeless members of a great system, deprived of their vital principle, without power and without use.

[Nors.—Although no claim is made to originality, in the leading principle on which these views are based—viz; a Ship navigation from the Ocean to the Lakes, it may be proper to recall that same systematic regard towards this object which was suggested by R. Nichol Esq. some years ago, to the Legislature; and it was on this suggestion that the dimensions of the Welland Canal were determined on, by reference to the usual depth of the Harbors and Rivers on and above Lake Eric.]

## SECTION 1

The present state of our inland improved navigation is as follows :...

- 1. In the British Government commenced the improvement of the St. Lawrence by erecting Locks at the Cascades and Cedars in Lower Canada. They were constructed to admit Batteaux and Durham Boats from 12 to 13 feet wide.
- 2. In ___the Lachine Canal (from Montreal to Lachine,) was completed by the Legislature of Lower Canada. The Locks were of increased dimensions, being 100 feet by 20, with 5 feet depth of water.
- 3. In 1825 the Welland Canal, connecting Lakes Erie and Ontario was commenced by a private Company on a still increasing scale; the Locks 100 feet by 22 with 8 feet depth of water.
- the Rideau Canal connecting Lake Ontario from Kingston with the tide waters of the St. Lawrence, was begun by the British Government; the scale of its Lockage presents a still farther enlargement; the dimensions being 120 feet by 33, with 5 feet depth of water.

Thus, it will be seen, we have three canals (leaving aside the Ridcau for the present) of irregular construction and dimensions, and under three separate systems of regulation. The St. Lawrence, under the control of the British Government; the second, under the control of the Legislature of Lower Canada; and the third, under the management of a private Company, in a canal line of 28 miles. These three are now in operation; and are, in addition to their local uses, intended to compete with the Eric Canal, connecting Lake Erie with the Ocean by Hudson River; which canal is wholly under the control of the Legislature of the State of New York.

By a comparative statement of the tariff of tolls on these rival works, we may draw our conclusions on the present system of our inland navigation.

On Lachine Canal (9 miles.)

Flour, \$\psi\$ bril. 3d. c'y. (5 cis.)

Boat, 12s. 6d.

On Eric Canal (9 miles.)

Flour, \$\psi\$ bril. 1½ cents—1

(nearly.) Boat, 27 cents.

Making the amount three times greater on the Lachine than for an equal distance on the Eric Canal.

On Canal at Cascades (1 mile.)
Merchandize, \$\P\$_ton, \$\P\$_1 \\
Durham, Bont (over 9 tons) \$14

Bares, \$10. Durnau. Barge, \$10.

On Welland Canal (28 miles.)

Fleur, \$\P\$ barrel, 7, cents.

Marchandize, \$\P\$ ton, 5s. c'y.

Merchandize, \$\P\$ ton, 84 cents.

This tabular view at once makes manifest our inability to compete successfully with our neighbour's enterprise so long as the scale and irregular dimensions of our improvements, and the divided system of control to which our inland navigation is subjected, exists. And it equally and manifestly suggests the remedy, viz: -a systematic line of communication, N WARTING

placed under the sole direction of the Legislature of Upper Canada, and under regulations framed to advance the internal interests of the people. alone can render us successful competitors with the ". s / 160." United States.

Fully to comprehend the means of accomplishing the above, and the magnitude of its objects, and as sured effects, requires some degree of inquiry and attention, but certainly very trivial, when we reflect on the singular importance of the subject, and the interest of every individual, more or less, must or should have in its completion and results.

## SECTION, 2.

A glance at the Map of North America will shew that the St. Lawrence and the Mississippi are the two grand natural outlets for the products and commerce of the immense territories surrounding the lakes; both possess relative advantages, which it is unnecessary at present fully to discuss.

From various causes connected with the natural circumstances of the United States, and the commercial preponderance of those States bordering on the Atlantic, a variety of communications are in contemplation or in progress, with a view to direct a portion of the products of the valley of the Ohio to the castern sea-board, viz.:---

The Pennsylvania Canal and Railroad from Pittsburgh to Philadelphia, in Delaware Bay; the Chesapeake and Ohio Canal, intended to connect the Ohio with the Bay of Chesapeake; and the Baltimore and Oliio Railroad.

These stupendous works, constructed at an expense of many millions of pounds, reflect every credit on the enterprise and patriotism of the States, Companies, and individuals, who have undertaken them. But when we reflect on the prodigious obstacles they have to surmount—the crossing the Alleghany Mountains, (extending from the St. Lawrence to the Confines of Georgia,) which are over 2000 feet above the tide waters of the ocean—together with the trans-shipment and shifting required in this arduous and forced system of transit, we can feel no apprehension of rivalry from that quarter.

The Mississippi, however, has undoubtedly some great natural advantages, particularly in the winter season. It has also unfavourable circumstances in rapidity of its current, the dangers of its obstructions, and the annual overflowing of its banks, rendering the immediate adjacent country of little avail in facilitating and contributing to the benefits of navigation. Still, by the extraordinary and numerous efforts of the Americans, and the natural advantages alluded to, it becomes indispensable on our part to employ our whole energies, and to place our improvements on a scale, insuring; our superiority and success.

# SECTION 3.

The St. Lawrence is no less distinguished by its magnitude than the natural advantages which peculiarly adapta it for a safe and permanent navigation. While it presents us a port in the summer season, in a direct line with European commerce, our immense lakes, acting as so many reservoirs, prevent those

This communication is now open from Kingston to Bytown on the Ottawa River, a distance of 130 miles; and according to report will be finished to Eachine the onsuing season.

sudden risings of water to which most great rivers are liable.

From the ocean, vessels can at present ascend the St. Lawrence to Montreal.

From Montreal to Prescott, a distance of 120 or 130 miles, the river is obstructed by rapids.

From Prescott any depth of water may be found to the Welland Canal, a distance of 270 miles.

The Welland Canal, with the dimensions stated, and affording 8 feet of water, a distance of 28 miles.

By the Welland Canal we reach the level of Lakes Erie, St. Clair, Huron, and Michigan, and communicate with their extended shores and tributary streams.

It will be observed that the only obstruction of moment from Montreal to Lake Erio, in a distance of 418 miles, is in the St. Lawrence; and from the best information to be obtained it is found that the distance necessary to construct a canal does not exceed  $37\frac{1}{2}$  miles.

With these facts before us, principally drawn from the surveys of Messrs. Clowes & Rykert, and of Mr. Alfred Barrett, can we without extreme surprise reflect that such extraordinary and obvious advantages should have been allowed to remain dormant; or can we be astonished that other countries should look on our supineness with still less commendatory feeling? It is true, attempts have been made during the last two years to obtain legislative aid for improving the river for the passage of hoats, and no doubt a very great reduction in the expense of transit would be effected; but as this plan subjects property to trans shipment, it is liable to very serious objections.

On the completion of the Rideau Canal it is probable likewise that barges will be constructed with sails, drawing 4 feet water, 90 feet in length, and 19 feet 6 inches beam. These may leave Quebec by steam for Montreal; thence through the Lachine Canal, towed by horses or by animal power; from its termination to Kingston by steam; proceed by steam or sails to Welland Canal; passing which, by horses to Lake Erie, they will thence reach Cleveland by sails or steam; making the entire transit without trans-shipment.

The chief objections to this mode which have been urged are—the increase of distance—the late opening in the spring—the small size of the craft to be employed, not being adapted for lake navigation, and the great amount of capital required to form and keep up such an extensive and numerous line of steam tow-boat establishments.

#### SECTION 4.

The most sure and exclusive method of inquiry to determine on the best system of communication, is to compare the relative rate of tolls and transportation on the different routes and canals now in use; a careful and strict consideration of which will also dispel the visionary ideas of those who imagine railways could ever compete with our lakes in transportation.

From Great Britain to Montreal, a distance of 3,200 miles, we pay from 7s. 6d. to 15s. currency per ton.

From thence to Prescott, 120 or 130 miles, from £3 15s. to £4 10s. per ton.

From Prescott through Lake Ontario, 270 miles, 12s. 6d. per ton.

These facts confirm the commonly admitted truth, the wider and deeper the water communication, the cheaper the transportation.

The transit on flour down, and merchandisc up, from Cleveland to Montreal, and vice versa, at present are as follows:—

# On the St. Lawrence.

dist.	pr bbl.	per ton.
Cleveland (Ohio) to entrance		
Welland Canal, 150	71	12.6
Through the Welland Canal, 28	9 9	10.0
Lake Ontario to Prescott, 270	10	12 6
St. Lawrence to Montreal, 120	2 6	3 15 0
Miles, 568	4 81	5 10 0

When the Rideau is completed, supposing the same toll to be exacted on the Eric Canal, that is, 3 cents per ton per mile up, and 1½ cents per ton per mile down, transit 1½ cents either way, we may anticipate the following prices by the Rideau route:—

# On the Rideau,

dist.	Flour	merch.
Cleveland to Welland Canal, 150	7.1	12 6
To Ontario, through Welland	n ivi	4000

Canal through points and over land (say).		40	down	_	1				3 <u>1</u> S1

The effect of opening a ship channel, connecting large bodies of water, so that a vessel can pass from the one to the other without trans-shipment, is to lessen the price of transportation throughout.

But, on these improvements as a means of diminishing the rate of tolls, we can only form a suppositive opinion so long as these Canals as above stated are subject to the control of separate authorities, and consequently may be varied and increased according to the views or caprice of their Directors under the Imperial Government—the Legislature of Lower Canada, or the Welland Canal Company. Thus introducing uncertainty into all the etimates of commercial men, subjecting our commerce to embarrassments, and leaving it in the power of one or the other of these authorities, by raising the toll within their control, to destroy the intercourse and trade through the whole transit.

### SECTION 6.

Let us now recall the great general object in view—the connecting Lake Eric with the ocean by the hest and cheapest communication for the public benefit; and let us ask "viho are the most interested in this communication?" Those who are suffering a continual and oppressive tax from the present inadequate navigation—the people of Upper Canada. If so it is most natural that they should first turn their attention to it; and feeling at once the immediate injury which every man sustains in his property and means, and the convincing evidence of the checks existing upon the advancing prosperity of the province, that they should come forward, resolved to rest satisfied with nothing short of the full attainment of their wishes and their rights.

Nor, as it may have already appeared, can there be any hesitation or contrariety of opinion on the best system to attain our objects; it suggests itself as naturally as the waters flowing from Lake Eric to the ocean aid and point out the only elegible and unerring route to be adopted, insuring us a thorough relief from the burthensome commercial taxation we labor under, and enabling us not merely to compete with the American undertakings, but, as far as can be predicted, to obtain a decisive and permanent superiority.

If our interests, therefore, prompt us to make our inland communications on a scale adequate to these inseparable objects, (as whatever accomplishes one necessarily includes the other) our only secure and sound policy also is to have it placed under the direction of the Legislature of the Province. By this provincial control of the entire communication from

the ocean, the tolls would be regulated with respect to the great objects in view.

#### SECTION 7.

Our burthens can be removed and our prosperity insured only by constructing a ship canal of not less than eight to ten feet depth of water; and thus rendering Lake Erie's territories, and the shores of the upper lakes on the same level, a Sea Coast.

The different tributary streams which disembogue themselves into this immense line of communication may be then brought into navigable purposes by private companies or individuals on the plan now in progress on the Grand River; or as in other sections of the province, by rail roads, where similar advantages from natural water courses do not present themselves; and thus in a very short period, if a proper spirit prevails, every part of the province will largely participate in secondary benefits, while they are sharing the general relief and prosperity.

## SECTION 8.

It cannot be denied there are seeming difficulties in the way—local prejudices to be removed, and unanimity required throughout the province to effect this grand design.

It has been suggested that as Lower Canada has an equal interest in the undertaking, deriving almost exclusively the benefit of all the foreign commerce it will create, she should bear her share in the expenditure. True; but Lower Canada not feeling the inclination, we have no power to compel her into the measure. And it has been added that as Lower Canada possesses about 30 miles of the line of communication, it is in her power to prevent our making it. This objection must be held merely as a supposable and temporary difficulty; for if the Legislature of this province address that of the Lower Province asking permission to construct a canal from the boundary line to the tide waters, it is not reasonable to imagine it could be refused. If the Legislature of Lower Canada should act so inconsistently with her interest, and justice to us, there can be no apprehension but that by her refusal the absolute necessity of Upper Canada possessing a port by extending her boundary line, would be made manifest, and that an address to the Imperial Parliament to that effect would ensure its attainment.

#### SECTION 9.

It may now be asked, "Does Upper Canada possess the means to effect so gigantic an undertaking?" This is the only serious question for consideration, and shall be now pretty fully met.

 $R_5$ 

We have the authority of Messrs. Clowes, Rykert, and Bennett, who have estimated the cost of a steam boat canal from Prescott to Cornwall to state the expense of that portion of the line at £200,000. This forms more than one half of the entire distance, and the sum given is considerably over the strict estimate.

The Welland Canal embraces a length of nearly 50 miles, with three harbors, and almost two miles of the deepest cutting in America (with one exception) and with 340 feet lockage. The entire cost, when finished, will not equal £400,000.

There is no deep cutting on the whole line of the St. Lawrence. You can gain a summit at pleasure, and choose your depth of cutting; or by continuing in the river reduce the length of cutting within forty miles, with 200 feet lockage. There is therefore no reason to suppose, comparing it with similar works, it will cost over £500,000.

But let us grant that it may cost £1,000,000; this province is as well able to construct it as the British Empire; and so far from creating a tax on the people, it would relieve them from a most oppressive one on the produce and imports of the province, which they are now paying.

By subjecting the question to calculation, it will stand thus: The dimensions being determined on, a loan is negotiated for the whole amount, to be redeemed in 20 years, at 4 per cent., and to be paid in as the work proceeds.

1st. year—£100,000 paid in. Interest thereon, £4,000, to be paid from the principal.

2nd year—£200,000 paid in. Interest, £8,000, to be provided for in like manner.

At the close of this season the Long Sault, and the distance from the cote to the Ottawa, will be completed, and boats be enabled to pass through the entire route.

3d. year, £400,000 expen. Interest ..... £16,000
300,000 expen. 1st &2d.yrs.do. 12,000
£700,000 £28,000

The income this year may be safely stated as follows:—

Tolls on 50,000 tons descending, at 5s.,.. £12,500 do., 20,000 do. ascending, at 18s.. 14,400

(Rates of the Erie Canal, N. Y.)... £26,900

This revenue will nearly meet the interest of the current year, and effect the following saving to the country:—

On 500,000 barrels of flour, at 1s.,.... £25,000
On 20,000 tons of merchandise, at 50s.,.. 50,000

£75,000
4th yr. £300,000 expended. Interest,... £12,000
700,000 do. 1st,2d, &3d yrs.do. 28,000
£1,000,000 Interest,... £40,000

The increase this year in tolls may be supposed one-fourth on the income of the preceding.

3rd year,	•••••••	£26,900 6,725
		£33,625
Interet due the 4th year Income for the 4th year	,	£40,000 33,625
For the 3rd year,	Deficit,	£ 6,375 1,100
	$(x_1, x_2, \dots, x_n) \in \mathbb{R}^n$	£ 7,475

At the close of the 4th year we suppose an uninterrupted ship navigation effected from the ocean to the Sault St. Marie, at the outlet of Lake Superior, and a debt incurred of £40,000 interest.

#### SECTION 10.

From the manner in which the public returns in Lower Canada are made, it is impossible to get at either the quantity in tons or value in pounds, shillings and pence of our imports. Without such specific returns we cannot designate what articles would bear an additional duty and not increase the price, or the amount which such a duty would produce. One or two articles may be remarked on.

Present Freight and Transport- ation.	By the proposed Canal.
Iron-Liverpool, # ton,	Iron, &c.
£6 0 0	æ6 0 0
Freight to Mon-	Do. 0 10 0
Freight to Lake	To Lake Eric by new Ca-
Erie, from £5@600	nal 2 0 0
£11@£12 10 0	£8 10 0

On the article Iron, it will here be seen, the transportation is from £5 @ £6 \$\P\$ ton; consequently a duty of £1 or £2 \$\P\$ ton might be imposed, and still effect a saving. In like manner, Salt would show a diminished expense of transportation and price.

Present Freight and Transport-	On the proposed Canal.		
Salt, Liverpool, # ton,	Salt, &c.	7.7	_
£0 12 0		£0 12	.0
Shipping Charges, Com. 0 0 6	Do.	0 0	6
Freight to Mon-	Do.	0 10	0
treal 0 10 0	To Lake Erie	2 0	0
To L. E. £5@ 6 0 0	* .		٠.
l)			
£6@£7 2 6	100	£3 2	- 6

One ton of salt is equal to 40 bushels, which would bring the article, on Lake Erie, to 7s. 9d. # barrel, whereas the lowest price it can be afforded at now, by the Erie Canal, is 8s. 9d., without duty. I have adduced the above, merely to show that the most necessary articles in use can be imported cheaper than from a foreign country, and will even bear a duty here, if necessary. If so, what will be the extent of the general trade created? Our exports, consisting of heavy, bulky, and cheap articles, and our imports, principally light and valuable, the return or upward freights will always be proportionably cheap, as we now witness by the return freights across the Atlantic.

In addition, we will merely observe, that the imports for the Canadas alone nearly doubled from 1820 to 1830.

#### SECTION 11.

On the subject of Canal Revenue, we may suggest, that it would be unnecessary and impolitic to impose one farthing of duty on any article for the repayment of interest or capital of loan; as the immediate incre to of transit, created on opening the ship canal, will be amply sufficient to meet the expenditure; and that, too, principally on foreign articles, which will be drawn through this channel. While at the same time, as we have shown conclusively above, we can raise a revenue out of the articles imported, and still reduce our present burthens.

The State of New York imposed a duty of 12½ cents on each bushel of salt manufactured in the State, to meet the interest on their Canal debt; notwithstanding the reduced transportation, after the completion of the Canal, brought the article much cheaper than it was sold before; and although we contribute to that duty on every bushel we consume, we are, in common with them, gainers.

The trade already created by the opening of the Welland Canal has greatly increased; and from a quarter from whence we never obtained a single article before. From the experience and progressive results of the Eric Canal, during the following years, we may have a sure ground for the most calculable expectations; but great as they are, it is not too sanguine to say, that we are not bound to take them as the measure of ours.

The increase on the Eric Canal was as follows :-

In 1821\$	2,220
In 1822	44,486
In 1823	89,988
In 1824	319,320
In 1825	521,345
In 1826	750,759
In 1827	847,759
7. 1828	897,265
To 1829	771,685
T. 1000	1,056,922
In 1831	1,193,435

What the amount of the trade will be, that must be brought into existence and drawn by superior advantages, on the opening of a ship canal, is beyond our calculation. Before five years from the completion of the work, the income cannot be less than £250,000, should the Legislature think fit to continue the toll!

The primary object of the Canal, undoubtedly, is to benefit the inhabitants of this Province. Lower Canada and the Mother Country will participate. But we should be actuated by far more noble and philanthropic views of its consequences. At least

2,000,000 of people will partake of the benefits flowing from this great work; great, when brought into comparison with our youthful country, but almost insignificant when we look to its far spreading blessings—its progressive and inculculable effects, and its duration!

#### SECTION 12.

By the supineness and want of public spirit in the Lower Canada merchants, very little, if any, advantage has as yet been derived from the Canada Trade Act. The apprehensions entertained by a portion of the Canadian agriculturits, that the effects of this Act would be to depreciate the value of our produce, have been completely dispelled by the state of our markets. These apprehensions were in some measure occasioned by the novelty of the considerations required to see its true bearings; but still more from the erroneous ideas industriously circulated at the time the Act came into operation.

Experience proves that the markets in all seaport towns improve in price by the quantity of the article kept constantly on hand, and are not subject to those great fluctuations which we have so frequently felt in Quebec and Montreal; that is, if the market depends on foreign consumption. The reason is obvious. The owners of ships, and those engaged in foreign commerce, direct their vessels to that port where they know a supply can be relied on, either for purchase or freight.

If our flour and wheat were wholly consumed in Quebec, then an additional supply would of course lessen the price; but as we are wholly dependent on foreign ports for our demand, it is there where the article is consumed that we must look for competition. I shall quote the illustration of this subject by a celebrated statesman, the familiarity and clearness of which every farmer must comprehend.

"Suppose a barrel of flour raised in Ohio, and another in the London District. The former finds its way either to Liverpool or Jamaica, by way of the Erie Canal; the latter by the way of the St. Lawrence. Or suppose the Ohio barrel should accompany the other, side by side, to the same place, where they are consumed. Could it make any difference to the Canadian farmer who sold his flour in Upper Canada? We cannot lose by drawing American produce by this route to the ocean, but stand every chance to increase the price, by keeping at Quebec a constant supply, and arresting the attention of foreign commerce; besides the indirect advantages gained by every class, in the transit, commission, shipping," &c.

As many may doubt the very great increase we anticipate, on the other hand, there may be some who will predict evils to arise, from the great quantity of produce, &c. which will be drawn from the western and southern States. For instance, "that we may manufacture their wheat and send it to Great Britain as Canadian, and that this may create alarm in the agricultural interest in England, and produce some law injurious to us, directed against this evil."

To meet every possible objection, I will observe, that very little has been done in the trade as yet; that the prices in New York keep nearly up to the

Montreal market; and, farther, that all we can possibly draw from that quarter, will never be noticed in the English markets.

The competition we have to fear, is from the Baltic, and those grain countries so much nearer the great mart of England.

But it is obviously the policy of Great Britain to admit our grain free from duty, as well as to give a competent discriminating duty on all articles passing through our waters from Ohio, over the same articles in the united direct from any port in the United States. By this means she would not only obtain employment for her shipping, cauals, &c. in the transit, but create a demand for her manufactures. The shores of Lake Erie, on the Ohio, are destined ere long, to become a great receptacle of manufactures for the southern markets. They can be imported direct to Cleveland, via. Montreal, on completion of this work, far cheaper than by New York; and will be bartered for cotton and tobacco, the former of which already enjoys a discriminating duty of 5s. 6d. per cwt.

The above views, founded on facts and necessary deductions, I submit to my fellow countrymen—the people of Upper Canada; confident that it only requires their attention and consideration to awaken one and all to a full sense of the leading and all-embracing object to which they tend. That being obtained, we have only to adopt means of concentrating the wishes of the Province, and to hasten, as fur as possible, the period of their fulfilment.

For this purpose there is but one way; let our Representatives pass an Act in the approaching Session, "To render our inland communications a thorough and efficient ship navigation from the ocean to the lakes, by the completion and construction of the works required."

The time is short, but it is sufficient. All that is required is zeal and unanimity, to ensure success; and by rendering the frontier of Upper Canada A SEA BOARD, we will reap, within a very limited period, all the advantages and prosperity which it must command.

## A PROJECTOR.

St. Catharines, November 1832.

## IN THE YEAR 1833.

An Act was passed on the 13th February of this year authorising the Province to subscribe for the Stock unsold, and £7500 was placed in the hands of Commissioners. These Commissioners were appointed for expending the same, and for the purpose of examining the Canal and reporting thereon—and to this end Judge Wright, an Engineer of eminence from the State of New York was employed by them. His Report to the Commissioners enters very fully into every subject connected with the Canal, and reference is made thereto.

In page 6 of his Report this gentleman makes the following remark:

"It appears by the last Report of the President "and Directors of the Welland Canal to the Stock-"holders, that the expenditure upon all their works "on main Canal—feeder, dam, Harbor, branch by

"Welland River to Niagara River, damages for injury done &c., up to March 1833, was £356,955,
and viewing the work at all these various places,
it appears to me that there must have been good
conomy to accomplish so much as has been done
for the sum above stated."

Who is the best judge of the expenditure—Judge Wright, or the Directors of 1835? The minutes of this year give a detail of the pro-

ceedings of the Directors.

Documents referred to in the foregoing Remarks.

This year the Government appointed the following Directors—viz.:

William Elliot,
Charles Duncombe, and
William Chisholm.

And the private Stockholders.

Wm. H. Merritt, Alex. Y. McDonell, George Keefer, Thomas Butler, and Ogden Creighton,

Esquires.

No. 1.

# ACT OF PARLIAMENT,

3RD WILL, IV., CHAP. 55.

An Act for affording further aid towards the completion of the Welland Canal, and for other purposes therein mentioned.

[Passed February 13th, 1833.]

Whereas it is expedient to grant the sum of seventhousand five hundred pounds in aid of the Welland Canal Company, for the purpose of deepening the feeder from the Grand River, and keeping the Canal in repair during the current year:—Be it therefore enacted by the King's most excellent Majesty, by and with the advice and consent of the Legislative Council and Assembly of the Province of Upper Canada, constituted and assembled by virtue of and under the authority of an Act passed in the Parliament of Great Britain, entitled "An Act to repeal certain parts of an Act passed in the fourteenth year of His Majesty's Reign, entitled "An Act for making more effectual provision for the Government of the Province of Quebec, in North America," and to make further provision for the Government of the said Province," and by the authority of the same, That it shall and may be lawful for the Governor, Lieutenant Gover-

nor, or person administering the Government of this Province, to authorize His Majesty's Receiver General of this Province to raise by Loan from any person or persons, bodies politic or corporate, who may be willing to advance the same upon the credit of the Government Bills or Debentures authorized to be issued under the authority of this Act, a sum not exceeding seven thousand five hundred pounds, at a rate of interest not exceeding five per cent, and that as soon as the said sum, or any part thereof, shall be so raised, it shall and may be lawful for the Governor, Lieutenant Governor, or person administering the Government of this Province, to issue his warrant upon the said Receiver General for the same in favor of the Commissioners hereinafter named, whose duty it shall be to superintend the expenditure thereof.

II. And be it further enacted by the authority aforesaid, That the said sum of seven thousand five hundred pounds shall be paid, applied and expended in and towards the deepening and enlarging the feeder from the Grand River; in repairing and in keeping the Locks and Canal in repair during the current year, and in making the Surveys and Reports hereinafter mentioned.

aforesaid. That Absalom Shade, William B. Robinson and John Macaulay, Esquires, shall be Commissioners under the provisions of this Act, whose duty it shall be to superintend the expenditure of the said sum of money according to the directions of this Act; and to cause a complete survey of the said Canaland all the works connected therewith to be made by a competent Engineer, and to make a detailed Report of the state of the said Canal, of the improvements necessary to be made for completing the same, with the estimate of the probable expense of finishing the same, and to suggest any alteration which it may be thought advisable to make in any part of the route of the Canal, or in any of the works constructed thereon.

IV. And he it further enacted by the authority aforesaid, That immediately after the passing of this Act it shall and may be lawful for the Governor, Lieutenant Governor, or person administering the Government of this Province, to direct His Majesty's Receiver General to subscribe Stock in the Welland Canal Company to the amount of the said sum of seven thousand five hundred pounds, which Stock shall from thenceforth be held as, and deemed to be public Stock, and that the Government of this Province shall as the holders of such Stock be subject to the same conditions and have the same powers, advantages and privileges, as other Stockholders in the said Company.

V. And be it further enacted by the authority aforesaid, That the three Commissioners above named, together with Samuel Street, and David Thorburn, Esquires, shall be appointed to arbitrate and determine the amount of damages due by the Company to the different individuals on the line of the said Canal, under and according to the provisions of an Act passed in the first year of His present Majesty's Reign entitled, "An Act to afford further aid to the Welland Canal Company, and to repeal part of and amend the Laws now in force relating to the said Company"—and that the award of a majority of the said Arbitrators shall be final.

No. 2. REPORT

OF

THE COMMISSIONERS

 $\mathbf{0F}$ 

THE WELLAND CANAL COMPANY.

To His Excellency Sir John Colborne, Rnight, Commander of the Most Honorable Military Order of the Bath, Lieutenant Governor of the Province of Upper Canada, Major General Commanding His Majesty's Forces therein, &c. &c. &c.

The Commissioners appointed by an Act of the last Session of the Provincial Parliament, ontitled, "An Act for affording further aid towards the completion of the Welland Canal, and for other purposes therein mentioned"—

RESPECTFULLY REPORT:

That they met at York on the passing of the Act in the month of February last, and found that the principal duty assigned them was to apply a sum of money, not exceeding seven thousand five hundred pounds, "in and towards deepening and "enlarging the feeder from the Grand River; in "repairing, and in keeping the Locks and Canal in "repair during the current year; and making surveys and reports of the state of the said Canal; of the improvements necessary to be made for completing the same; and to suggest any alteration which it might be thought advisable to make in "any part of the route of the Canal, or in any of the "works constructed thereon."

In the discharge of the duty thus prescribed, the first object of the Commissioners was to ascertain from Mr. Merritt, the Agent of the Welland Canal Company, (who was then in York) and from such other sources of information as were available, the actual state of the Canal, and the nature and extent of such repairs as were most urgently demanded, and were within the compass of their means.

Mr. Merritt having, when questioned, given it as his decided opinion, that the immediate attention of the Commissioners to the repair and improvement of the Canal was necessary, it was resolved that two of their number (viz: Mr. Shade and Mr. Robinson) should proceed without loss of time to inspect the whole line of Canal, and make such arrangements as circumstances should be found to require. They accordingly repaired to Saint Catharines, where they arrived on the twenty-second day of February, and on the following day, accompanied by Mr. Merritt and Mr. Elliott, one of the Government Directors, commenced the inspection of the Canal at Port Dalhousie, and from thence proceeded along the whole course of the Canal to Gravelly Bay and the Grand River, stopping at every point where any work was required to be done, and obtaining all the information from the Lock Keepers and others that could be collected. On their return to Saint Catharines, they entered into contracts with different persons, who were recommended to them, for re-building two of the Locks, and for deepening such parts of the Canal and Feeder as appeared to require it. They then engaged Mr. John Donaldson, a person recommended by the Welland Canal Company, to procure the necessary number of men to begin the work as early as the season would permit, and complete it with all possible expedition. They also visited the quarry, and saw that measures were taken to draw the stone required for the Locks while the sleighing lasted.

Having made these arrangements, the Commissioners thought they would, by an occasional visit during the season, discharge their duty according to the intentions of the Act; but before they left St. Catharines, a letter was received by them from the Directors of the Welland Canal Company, stating the necessity that one of their number should give his personal attendance on the Canal until it was rendered navigable, in order that every exertion might be used in making the various repairs and improvements, and in preventing delay. It was accordingly determined that Mr. Robinson should return and personally superintend the work at all points on the line of the Canal, as soon as the weather would allow it to be commenced.

In conformity to this arrangement, Mr. Robinson arrived at St. Catharines on the fifth day of March, and remained until the repairs were so far completed as to enable vessels to pass through the Canal, which occurred on the twentieth day of May. He then went home, but soon returned, and with two other short intermissions, continued his personal superintendance of the Canal until the twenty-ninth day of October. This sacrifice of time and convenience on the part of one of the Commissioners was called for by the situation of the Canal, and was sensibly felt by Mr. Robinson, by whom it was incurred. consequence of his having assumed this charge, he made individually all the necessary contracts, and managed the disbursements. He also took particular care to visit the whole line of the Canal, (including the Feeder, which the Commissioners were required by the Statute to enlarge and deepen) once a week, and saw that nothing requisite for the welfare of the Canal was omitted on the part of the Board, or the persons acting under them. Among those persons, the Commissioners feel it proper to mention, was Mr. S. H. Farnsworth, who was engaged in the month of March to assist in superintending the repairs required at the two Locks near St. Catharines. He was strongly recommended by the Vice-President of the Company, and was besides personally known by Mr. Robinson. With his services at the Locks, and in the execution of all other duties imposed on him from the time when he was taken into their employ. ment until his severe illness (brought on by too great exertion and exposure while repairing breaches in the Canal) in October, the Commissioners have every reason to be satisfied; and they can confidently recommend him as a most efficient person to be employed, if occasion should require, in any future work of a similar kind.

In consequence of a request made to them by the Board of Directors, the Commissioners concurred in a Circular Letter being addressed to the private Stockholders, inquiring into their inclination to dispose of their interest in the Canal, and the terms to which they would agree; the answers to which letter were received by the Secretary of the Company.

It was a subject of great regret that the Canal could not be opened at an earlier period in the spring than the time already stated, particularly, as

several vessels from Oswego, bound to Cleveland, were detained from eight to twelve days at Port Dalhousie; but when the amount of work exhibited in the annexed statement, as having been performed, is considered, the Commissioners feel assured that the delay will be satisfactorily accounted for, and they would observe that it was the general impression of those who witnessed the state of the Canal in March, that it could not be got ready for use before June or July. Indeed reports to this effect were widely circulated.

When the operations of the Commissioners were commenced, and the new route from the Junction to Gravelly Bay, which had not yet been navigated) was examined, much more was found necessary to be done than was anticipated, and in fact the greater part of the sum expended has been applied in finishing the Canal rather than in repairing it. The whole section from Port Robinson to Gravelly Bay, (12 miles in length) required deepening, much of it being actually a foot above the proper bottom level. A large expenditure at Gravelly Bay was also incurred in dredging out the sand from the space between the Piers and in the Lock, where there was not found a greater depth of water than three feet, for a distance exceeding one hundred yards, in consequence of an accumulation of sand and gravel, formed by the wash from the lake during the winter.

Having at length succeeded in rendering the Canal navigable, the next object of the Commissioners, in pursuance of the Statute, was to get the whole line, and all the works connected with it, examined by a competent Engineer. It was important that a person should be selected for this service whose talents and judgment had been well ascertained in a country similarly circumstanced, in many respects, and on whose experience full reliance might be Accordingly, after careful and extensive enquiry, the Commissioners determined to employ Benjamin Wright, Esquire, of New York, a gentleman of great experience, who was principal Engineer on the Erie, Delaware, and Chesapeake Canals, and who is admitted to be at the head of his profession in his own country. In the months of July and August, when his attendance could be most conveniently given, Mr. Wright, accompanied by all the Commissioners, carefully inspected every part of the Canal from Lake Ontario to Lake Erie, and passing through the Feeder, ascended the Grand River about twenty-five miles, in order to form a correct estimate of the supply of water which it may be expected permanently to afford. His attention was directed by the Commissioners to the following points, as stated in a memorandum communicated at that time, and to which he was requested to advert when he should frame his report and estimates.

The Commissioners required him—first, to examine the Welland Canal, and the works connected therewith, and report upon the present state of the same as fully as possible.

Secondly, To state what work and expense would be necessary to render the present route of the Ca-

nal permanent and complete.

Thirdly To state what alt

Thirdly, To state what alterations he would recommend in the present route of the Canal taking into view the proposed cut to the Niagara River, and furnishing an estimate of the expense attending the same.

The Memorandum continued in these words:-"These are the general heads of enquiry, stated conformably to the third section of the Act, of which a copy is supplied Mr. Wright."

"The following queries have occurred to the Commissioners during their own inspection, and in the course of their superintendance of the Canal, and are submitted for Mr. Wright's consideration."

" F rst. His opinion of the state of the works at Port Dalhousie, and of its advantages or disadvantages as a harbor; its capability of being made a permanent and commodious steam boat harbor; and the necessary expenses attending such alterations and improvements as he might, with that view, recommend.

"Secondly. His opinion as to the propriety and expense of moving the lock at Port Dalhousie further from the pier, and altering the position of the waste wier, in such manner that the surplus water may be discharged through the harbor.

"Thirdly. The expense of re-building each lock permanently of stone, (there being forty locks on the line of the Canal,) and also, the best method of reconstructing them, which, under all the circumstances, he would recommend.

"Fourth. His opinion of the practicability of rebuilding the locks in the Winter; and the difference in expense between building in summer and in win-

" Fifth. As to the difference between the expense of removing the materials of an old lock and building a new lock on the foundation of the old one, and the expense of constructing a new lock of the same kind in another situation.

" Sixth. His opinion of the harbour of Port Dalhousie compared with the harbour by Niagara river.

"Seventh. His opinion of the proposed side cut to Niagara; and also of the difference of expense between making that part of the present route which lies between the foot of the mountain and Port Dalhousie a permanent work, and opening the cut to Niagara for ship navigation, on the same scale as the Weliand Canal.

" Eighth. How can the Deep Cut he so improved as to prevent slides? Can it he done by giving the banks a greater slope, or by any other means? the bottom be deponed, as it has been suggested, by carrying a rush of water through it; or what other method would you suggest, as likely to be more effectual? Will not considerable expense be incurred in keeping this part of the Canal of sufficient depth, if measures are not taken to prevent the wash of the spoil banks from running into it? This part of the subject submitted to Mr. Wright's consideration requires careful examination, and the Commissioners are anxious for full details.

" Ninth. His opinion of Gravelly Bay, or Port Colborne, as a harbour; and also of the expense necessary to make that harbour a permanent and commodious steam boat harbour, equal to the harbour at the mouth of the Oute, or Grand River; and the difference of expense between the two harbours.

"Tenth. Whether it is necessary to deepen and enlarge the feeder, in order to ensure a full supply of water, independent of the advantage of making it fit for schooner navigation.

" Eleventh. As to the best method of making wooden culverts, when there is a pressure upwards of six or seven feet of water.

Twelfth. If the Marshville and Allanburg, (Mc-Donell's) Mills are not placed in situations injurious to the Canal.

" Thirteenth. As to the propriety of obliging owners of mills to have an embankment and stop gate between the Canal and their flumes.

Fourteenth. If it would not be advisable to make a Cut from Broad Creek to the mounth of the Grand River, with the lock placed near the latter place, thereby enabling vessels to enter the Canal by that harbour, also his opinion of that harbour.

" Fiftcenth. Is it not necessary to have more stop gates on the Canal-say one as near the lock at Gravelly Bay as circumstances will permit, and another near the aqueduct"

"These queries will range themselves under the three general heads originally stated, when Mr. Wright prepares his report.

"Be pleased also to state your opinion as to the length of the time the present locks will last, and when you think that preparations should be commenced for replacing them with new ones."

Having completed his inspection of the Canal, Mr. Wright returned to New York, from whence he transmitted the Board a full and explicit report, which is herewith submitted, and which will doubtless be found as satisfactory to the Legislature, as in the opinion of the Commissioners, it is honorable to the established reputation of its author, for whom

they entertain very high respect.

The Commissioners, with all who feel anxious for the success of the Welland Canal, exceedingly regret the frequent delays and obstructions that have occurred in its navigation during the summer, occasioned by accidents which could not be foreseen or prevented. All that the Commissioners could do, they can confidently say, was not omitted to be done. Mon were, in all such emergencies, kept at work, both night and day, without intermission, in order that not a single hour's needless delay might be complained of by the masters of such vessels as then happened to be in the Canal.

The first delay, of any moment, that took place was caused by the failure of a set of lock gates, through the manifest carelessness of the keeper, who omitted closing them properly before the admission of the water.

The next was occasioned by a most extensive breach at a stone culvert, on Marlatt's level, one end of which gave way without any apparent cause, the level of the water being only at its usual height; about forty feet of the stone arch was carried away. by the force of the water, many yards from the Canal, and the breach made in the bank was very wide and deep: to repair this damage occupied about twelve days, though every possible exertion was made on the occasion.

The last serious accident was the breaking down, at the same moment, of the upper and lower gates of one of the large locks near Saint Catharines. They had just received a thorough repair, and only failed in consequence of improper force and means employed in opening them. The lock keeper was not at his post, and the crew of the vessel about to pass, put the horses used for towing to the balance beam of one set of gates, which circumstance, aided by the neglect of proper precaution, caused all the injury. The delinquent lock keeper was, of course, instantly dismissed by the Agent of the Canal Company, for his want of attention to his duty. A delay of two weeks was the result of this mismanagement, and occurring, as it did, just after a great number of schooners had passed the other two points of detention, it was certainly most unfortunate; for some of the vessels were detained in the Canal nearly six weeks.

It may here be proper to remark, that the Commissioners had no control over the lock keepers, they, nevertheless, felt it their duty to acquaint the Directors with the want of attention exhibited by those persons at various times, and recommended some alterations in the system with respect to them, in order to guard against a repetition of similar accidents to locks placed under their care. In consequence of these representations it was arranged, that Mr. Vanderburgh a very efficient person, should be appointed to take charge of all the locks, and be made responsible for their being well attended.

These were all the casualities, occasioning a decided obstacle to the use of the Canal, but there were, besides these, several vexatious instances of interruption in the navigation during the summer, caused by the mills which derive from it their supplies of water—and the Commissioners are induced to arge that the owners of those mills should be required to construct an embankment and stop-gate between them and the Canal, so that in the event of any breach at the flumes, the water might at once be stopped, without incurring the necessity of drawing off, as at present, a whole level, in order to effect repairs.

The mills at Marshville are considered by the Commissioners, from their own observation, and the information of many persons of good judgment, to be highly injurious to the navigation of the Canal, placed as they are about mid-way on the long level of the Feeder, between the dam at Dunnville and Port Robinson, and without any reservoir. Besides this. the great quantity of water which they use is entirely lost to the Company, as it escapes into the Chippawa or Welland River. The Commissioners would therefore advise that these mills should be removed, or at least that some effectual method should be provided, (if any other than absolute removal can be devised) to prevent a recurrence of the annoyance they have occasioned. It is indeed, in their opinion, just cause for regret, that the hydraulic privileges created by the Canal should ever have been alienated by the Company, as it has established a separate interest, which already has produced, and will continue to produce great trouble and inconvenience; and they cannot avoid remarking, on the manifest inexpediency of suffering a great public work, upon which so much money has been expended, to be in the slightest degree injured or incommoded, for the sake of any minor advantages.

Having thus stated the proceedings of the Commissioners, and added such observations as occurred to them in their examination of the Canal, they have yet to advert to one section of the actunder which they have been appointed, assigning a duty not yet performed,

viz:—the fifth section, which directs them to sit as Arbitrators, "in conjunction with two others formerly appointed, for settling certain claims for damages due, as it is said, by the Welland Canal Company to different individuals on the line of the Canal." A day in the month of September had been fixed on for a meeting of the members of this Board of Arbitrators, but a variety of circumstances concurred to prevent the attendance of some of the members at that time, and it has not since been practicable to proceed with the business of the arbitration.

The importance of the Welland Canal to the best interests of Canada, must be too well understood at the present time, to demand from the Commissiouers any formal demonstration. They will merely refer to the Report of Mr. Wright, exhibiting the view taken of the subject by that intelligent and liberal minded gentleman. The great question now before the Provincial Parliament concerns the course which should be pursued in order to render the Welland Canal a desirable work, and suitable to the immense trade of which it must soon, to a certainty, become the favorite channel.

Mr. Wright explains in a lucid manner, the amount of the expense that must ere long be inevitably incurred in making it really useful; and his statements are strengtheued by the experience afforded this year of the injurious effects to trade caused by the breaches in the existing imperfect works, and the uncertainty thereby created among men of business, in forming their arrangements for the transportation of produce and merchandize. The cost of such solid and substantial repairs, alterations and improvements, as Mr. Wright has suggested, are assumed to be quite beyond the resources of a private Company; which fact, in addition to other considerations, leads to the conclusion, that the Canal ought to become entirely public property. The great navigable communications of the country, like its highways, should belong only to the Province, and be entirely and solely subject to the control of the Legislature. Under this impression, the Commissioners would respectfully suggest, that the interest of the private Stockholders should be purchased by the Province, and that the Canal should thus be rendered in name, as it always has been in fact, and must be in effect, a national concern. Whatever course may be adopted, it is clear that the just claims of the private Stockholders who have so materially, by their money and exertions, contributed to the completion of this stupendous work, should be liberally regarded. It is perhaps proper on the part of the Commissioners, here to suggest, that the Welland Canal Company owe a large floating debt to many individuals in the country, for contracts performed by them—the non-payment of which has caused great distress; and they submit for consideration the propriety of making immediate provision, for further payment of the debts of the Company, in which the credit of the Povince, as well as Canal Company, may perhaps be thought to be in some measure involved. The Commissioners feel the less hesitation in pressing the claim of these individuals on the notice of the public, after the opinion so strongly expressed by Mr. Wright, that the work exhibits no proof of want of economy in the expenditure of the Company. If any difficulty should be felt or experienced in the settlement of these points, the Commissioners would then respectfully suggest, that as much money should

be granted as would effect the necessary and indispensable objects stated in the Engineer's report.

Unless the Commissioners are greatly mistaken in their views, the Welland Canal cannot fail speedily to become a remunerating work, and even if it should not be found to yield a revenue as soon as they venture to expect, they yet think that the public should dismiss every consideration of what it has already cost, and look solely to the great results that must follow an expenditure on its improvement, such as is urged by Mr. Wright, by which it will be established as a certain, substantial and unfailing means of uniting the navigation of Lake Erie with that of Lake Ontario, and finally, on the completion of the projected Canals, below Prescott, with the Gulph of Saint Lawrence and the Ocean.

In the mean time, however, and while this important and interesting enquiry engages the consideration of the Legislature, the Commissioners beg leave to represent the necessity which they conceive to exist, of a grant of money for immediate purposes on the Canal.

In the supplement to his report, Mr. Wright estimates the amount absolutely required for keeping open the navigation during next season, at \$33,551 o, or nearly £8,500 c'y. Of this sum it is highly desirable that about one half should without loss of time, be expended in repairing some of the most defective locks, and completing the piers at Port Colborne. The remainder might be applied before the ensuing spring in the repairs and other operations described by Mr. Wright in the document already alluded to. The Canal would thus be ready to be opened as soon as the weather would admit next season, and be probably kept so without serious breaches; the importance of which should engage curnest attention, because it is only by that means that the result of a full season's use of the Canal can be duly ascertained.

A detailed account of the expenditure of the money appropriated by the Act. particularizing its application, will be submitted. The Commissioners plication, will be submitted. cleem it here necessary to state, that upon applying to the Receiver General for money, they were informed that the debentures for the loan authorised by the Legislature had not been taken up, and that he consequently had no funds. The difficulty which thus threatened the Commissioners in the execution of their duty, was only surmounted by Mr. Dunn's becoming personally responsible at the Bank of Upper Canada for the whole of the sum authorised by The Commissioners she Act, as it was required. having thus drawn the attention of Parliament to this circumstance, leave it to the Legislature to exonerate the Receiver General, by providing for the payment of interest on the debentures, at the rate of 6 per cent. per annum, at which rate only the money can be raised.

W. B. ROBINSON, JOHN MACAULAY.

York, 7th December, 1833.

Note:—The undersigned Commissioner regrets that the absence of Mr. Shade, the first named Commissioner in the Statute, has prevented the insertion in the foregoing report of any expression of the essimution in which they both hold the services rendered by Mr. Robinson, in devoting a large portion

of his time with so much judgment, assiduity and ability, in superintending the operations of the Board. In order to compensate him in some measure for those services, and for his sacrifice of personal interest and convenience, the two other Commissioners have agreed that he should be paid at the rate of five dollars per diem for the time he spent in attendance at the Canal.

JOHN MACAULAY.

# ENGINEER'S REPORT TO COM- ${f MISSIONERS}.$

To Absalom Shade, William B. Robinson, and John Macaulay, Esquires, Commissioners appointed by an Act of the Provincial Parliament of Upper Canada, passed February 13th, 1833, to superintend the expenditure of money on the Welland Canal, and to appoint an Engineer to survey and examine the Canal, and estimate the expense of finishing the same, and to report "upon any alterations "which in his opinion may be thought advisable in "any part of the route of the Canal, or in any works constructed thereon."

#### GENTLEMEN:

Having been honored in the appointment by you, under the third section of the Act above referred to, I have examined the whole line of the Welland Canal-its feeding waters from the Ouse or Grand River-the harbor at the mouth of Grand Riverharbor at Port Dalhousie-and the harbor at Port Colborne or Gravelly Bay; together with all the appendages connected with, or in any way appertaining to the construction or use of the Canal, and now I beg leave to present to you my Report.

# REPORT:

The Welland Canal, as now constructed between Lake Erie and Lake Ontario, is about 28 miles long in its main trunk, and in this distance it has thirtyeight lift locks, viz :-

21 locks of about 10 feet lift each.

4	do.	9	do.
7	do.	8	do.
4	do.	7	do.
1	do.	6	do.
ī	do.	5	do.

Total, 38 locks on the main line.

There are likewise two locks on the branch which descends into the Welland River—one of eight feet and one of seven feet lift. These comprise all the lift locks. Besides these, however, there are guard gates, or locks to secure the Canal from receiving more water into it from floods in Grand River than shall be safe, both as regards the feeder or Canal.

The feeder is 20% miles in length, from Dunnville, on Grand River, to its junction with the main stem, about 64 miles north of Port Colborne.

The original plan of the Canal was to have been 26 feet on the bottom, 58 feet on the top, and 8 feet depth of water, with slopes or angles of the banks, of 2 feet base to 1 foor perpendicular.

 $W_5$ 

The locks are 110 feet by 22 feet in the chambers between the gates, with the exception of three locks below Saint Catharines, which are 130 feet long and 32 feet wide in the chambers.

In the course of this examination, I was furnished by the President of the Company, and their Engineer, with every information which I solicited and in their power to give.

It appears by the last report of the President and Directors of the Welland Canal Company to the Stockholders, that the expenditure upon all their works, on main Canal, feeder, dams, harbors, branch by Welland River to Niagara River, damages for injury done, &c. up to March, 1833, was £356,955; and viewing the work at all those various places, there appears to me that there must have been good economy to accomplish so much as has been done for the sum above stated.

Taking the whole work as it now exists, the greatest error I have seen is the plan of constructing the locks:—I do not object to wooden locks, in a case like the Welland Canal, but I think the plan of block work for the sides of the locks is very objectionable, and more particularly the plan of securing the ties by dovetails not passing through the front or face timbers; and for this reason, a little bad workmanship, or decay in the timber, makes a weak place in the work; and this with a clay puddle behind it, a snbstance that with the common operation of severe frost, will certainly cause these ties to lose their hold upon the front timbers, being only let in.

I have had locks built under my charge by block work of face timbers, ties and anchors, but much care was taken to have the ties run through the face timber and secured to it as strongly as possible, but without any grove and tongue in the timber, because no reliance was placed upon making these timbers water tight, but the whole inside was well planked, and made tight by the planking only. Experience has proved to me that both these plans are very objectionable, for the very good reason, that they are extremely difficult to repair when decayed, besides their expensiveness by reason of requiring so much timber.

Having said thus much in regard to the Canal and its locks, I will now enter upon a description of the present situation of the work, and also point out what I think would be improvements in its great plan.

Mr. George Keefer. Junr. the Engineer of the Company, has given me the quantities of earth and rock to be excavated, to bring the Canal to its intended original width of 26 feet bottom, and 58 feet top, water line. These quantities I shall notice hereafter.

In conversation with the President of the Company, W. H. Merritt, Esquire, he expressed the opinion (and it appears to have the sanction of the Commissioners by their re-building in conformity therewith, this season, one of the locks which had failed) that the locks ought to be 24 feet wide and 110 feet between the gates, and in the conviction that this is a size better adapted to vessels designed for the Lake trade than the present locks—I fully concur and recco immend, that whenever locks are rebuilt, they should be of these dimensions.

Admitting this to be correct, (and I see no cause to doubt it,) if we enlarge the locks we ought to en-

large the size of the Canal, to conform to this increased size of locks.

I have drawn a cross section to show how much space two vessels of the largest class will occupy.

#### No. 1.

### Scale, 10 feet to an inch.

This diagram or cross section exhibits only a view of the size of the Canal, such as appears to me requisite to correspond to locks of 24 feet width. I will now give a diagram or cross section of the Canal, according to its original plan of 26 feet bottom and 58 feet top, water line.

### No. 2.

From these views of the space occupied by vessels passing each other, it is certain that if we enlarge the Locks we ought to enlarge the Canal also, to correspond thereto. I have not the exact data upon which to estimate the quantities of excavation which such enlargement will require, but from the calculation I have made I can give a tolerable approximation to these quantities; and as the additional expense of enlargement will not cost a sum that is any way alarming, it would prove good policy to excavate this extra quantity at the same time that the removal of that quantity designed to make the Canal what it was originally intended, is progressing.

From the information given me by Mr. Keefer, there is to be removed between Port Colborne and the junction of the Feeder, (distance 6\frac{3}{4} miles) to make the Canal 26 feet bottom and 58 feet top—45,932 cubic yards of earth, and 8020 cubic yards of rock; and I estimate that the triangles marked a a, in diagram No. 2, will contain about 56\frac{1}{2} cubic yards in each side to every sixty-six feet in length of Canal—equal to 113 yards. On the supposition that the whole distance of 6\frac{3}{4} miles will require this angle on each side to be romoved, we then have—

61,020 cubic yards in the whole.
11,000 cubic yards of this we will assume as rock.

50,020 yards remain of earth; we then have

45,932 as above, 50,020 additional width,

95,952 cubic yards of earth at 20 cts., \$19,186 40

\$35,206 40

Which sum would make the Canal an excellent work so far; and while the excavation now absolutely necessary is going on, it is undoubtedly best to execute the other.

Between the junction and Port Robinson the distance is 5½ miles. Mr. Keefer estimates that in this distance there is to be removed, to make the Canal 26 feet bottom, (its original intended width)—

52,195 cubic yards of earth; and as we find a considerable part of this line of the Canal in a natural ravine, and sufficient width, I estimate only—

36,000 cubic yards to be removed to make the bottom 36 feet, and the top 60 feet water line.

88,195. Total to make this line, a 16 cts. \$14,111 20

This excavation is necessary in many places to give greater stability and permanency to the banks where they give evidence of weakness.

The next point of moment is the Deep Cut, which comprises the distance from Port Robinson to Allandurgh—2 miles and 55 chains. In this distance, Mr. Keefer has estimated that 11,700 cubic yards must be removed to give 26 feet bottom. It is a matter of assumption to give the quantity in addition to the above, required to make 36 feet bottom. It is well understood that the Canal through the Deep Cut was intended to be 15 feet below its present bottom, and that much of the excavation was carried to that depth, but by reason of quick-sands, very heavy slips occurred, and the original plan was abandoned, and two lift locks at each end added, to raise 15 deet.

I have assumed that, in addition to what Mr. Keefer has given, if 12,500 cubic yards more were removed, making 24,200 cubic yards, it would give the Deep Cut the desired width and depth .- 24,200 yards at 10 cts. average, is=\$9,860. In removing this quantity. I should advise that experiments be made with Dirt Boats, by excavating in pits, leaving a stank around to keep out water. In such a clayey subestunce as the Deep Cut, a pit of 10 feet wide and 15 or 20 feet long, might be excavated 2, 3, or perhaps of feet below the surface of the water. These small i feet below the surface of the water. pits should be carried down as low as possible, and then water let into the one that is to be abandoned ;this water counteracts slips, in proportion to its comparative weight with earth. These pits, being small, the ends operate with buttresses while digging and the water being let in after continues to preserve the counteracting force. In my opinion, one third, or perhaps one half of the excavation necessary, might be effected at less expense than any other. A test, by way of experiment, costs nothing extra; and requires only good judgment to be fairly tried .- This earth should be taken to raise the tow-path bank near Port Robinson, where it is too low and narrow. After all has been removed which can be by this method, I should advise the use of a dredging machine, worked by horse power. I have had them under my charge worked by steam and by horse spower, and when the machine is well managed, earth can be removed and put into bouts for 20 cents per yard—to which add from 10 to 14 cents for transporting it 1½ mile to the large natural bssin near Port Robinson, where there is a place to receive it, and Dirt Boats with trap door bottoms can discharge it at once. Large contracts are made and executed to my knowledge in the Harbor of New York for removing earth in 15 feet water, at one cent per cubic foot, or 27 cents per cubic yard. Such a machine will be wanted for the Canal and Harbours connected with it; and if none can be obtained on hire, one ought to be prepared.

The securing the spoil banks along the Deep Cut from washing in and filling the Canal, is an item requiring speedy attention, and before the excavation of the Deep Cut is completed. This can be done by first seeking out places where a cut can be made

through the spoil bank from front to back. Sometimes this cut will be of considerable depth—say perhaps 10 or 15 feet; and in such a cuse, a trunk made of two inch plank, one foot or more square, should be placed therein, and the whole well covered in. Next, forming a Tow path along the brink of the spoil bank, with gentle undulations, so as to carry as little earth as possible. At the lowest places, the water collected in the bank finding its way into the drain formed on the back of the Towpath, and entering these outlets, passes off behind the spoil bank. About six to twelve of these drains or trunks, (as the case may be) cut so as to cast the water from the face to the back on each side of the Canal, would be sufficient. By doing this with care and faithfulness, a good tow path would be formed, which is now much wanted.—(See plan.)

As observed above, the tow path C. to be formed so as to have ascents and descents, sloping a little to the back side, that the water may be thrown off into the discharging drains. It only requires good judgment to select the best places for these drains, and connect the drain in the back side of the tow path with them. The tow path can be made 20 or more feet above the water, as the case requires. The expense of this work, if well done. I should think would not exceed \$1,200. If there should be a case where the excavation would be too great, a substitute of a temporary character might be made by a trunk of plank buried in the earth, and so laid as to carry the water into the Canal without much earth with it.

It has been suggested, that a part of the Deep Cut might be washed out by the force of the current of water through the Canal, made by cutting the bank at a ravine or embankment near Allanburgh. A cut made there would create a descent of 16 or 18 feet from the present surface of water in the Canal.

If the substance to be washed out is that soft semifluid, slushy matter that has been washed into the Canal from the sides, or should be quick and, I think the operation of such a current might sweep away great quantities of it. This is an experiment which should be well considered and digested before determined upon, and all its bearings well understood, viz:—

First. To see what disposition can be made of the water when let off in such great quantities; whether it can be disposed of by passing into the bed of some stream, and do no injury to individuals.

Second. Whether there is a good place to deposit the earthy matter which shall be removed, and that without injury to private property.

The guard gate at the bridge will enable us to control the body of water, and regulate it as shall be found most advisable. If there is no danger to be apprehended on the points mentioned, I should incline to try the experiment. There is, however, one other very important view of this scheme (i. e.)—it is well known that the slips are much more likely to take place when the Canal is empty than when filled. If the water should be drawn off, will there not be increased danger of slips?

The formation, as I have understood it, of the soil in this Deep Cut is a very stiff clay for forty feet or more in depth, and underlaid with quick sand. All the force of current we can bring to bear upon this stiff clay, in its natural bed, will not remove it; there is too much solidity and firmness to be operated upon by water, except by a much greater fall than we have at command. This tenacity of the clay is seen in the bottoms of the little gullies formed in the spoil banks. Thus the operation of the water in such a case may be the means of producing a greater evil instead of rendering a benefit, by causing the slips to become worse.

The question is asked, whether the slopes of the banks must not be greater before they will remain permanent.

It is certain that slips are among the most difficult things an Engineer has to contend with, and from the experience I have had on the Chesapeake and Delaware Canals, (where I had many of them, and one of 40,000 yards,) I found no preventive but taking away the earth, and sloping the banks so that they would remain immoveable.

In such stiff clay as the Deep Cut of the Welland Canal—Benches might be cut thus:—

I have tried the driving of piles 10 to 14 inches in diameter, and 20 to 25 feet in length—where they enter 10 to 15 feet of solid improveable earth, they may do much good—but if I understand the formation of this Deep Cut, the bottom of the piles would be in quick sand; in this case they would be of but little use in keeping the bank from slipping. If any attempt should be made, the piles should be driven so much within the bank as to leave permanently 10 to 12 feet of earth between them and the edge of the water. On the whole I should not have much confidence in the benefit to be derived from them.

Much of the earth in forming the bank hy offsets, could be removed by carts, or by temporary railways; these latter, passing on a level, to discharge the North or South ends of the Cut into some of the natural basins or low grounds. If the plan of lightening the banks was pursued in the way I have pointed out it would make a permanent work, and each bench would be a catch drain to prevent the face of the bank from washing; when the banks are once put into regular shape, great pains should be taken to get vegetation of any strong rooted kind on them, to aid in checking the washing by rains. The expense of putting the slopes in good order, I should estimate at \$20,000.

The next item of great importance is the Locks. These are faulty in the plan and execution. The question presented then is, how to remedy the defects in the most economical way, considering the durability of the timber is already more than half gone. The ties are successively losing their hold upon the face timbers every winter—an effect which the severe frost, by operating on the clay puddle in the rear of these face timbers, cannot but very much accelerate. In all future plans for repairing Locks, I should advise never to place clay puddle in a position that frost can operate to force the walls out of place.

In the plans herewith presented, I have in plan No. 1, exhibited the foundation of the Locks, as I have been informed they are made. In Nos. 1 and 2 of the drawings, the mud sills or bed timbers laid across the Lock are represented in green lines, in the positions they are placed. That part represented by red lines, shows the position of the streak sills, and also that portion of the work which may be found perhaps substantial enough on one side to raise up posts and tie them back into the present crib work, although I have doubts whether much can be gained by any attempts to save any thing but the foundation. This plan is drawn on the supposition, that whenever any Lock gives way on the sides, it is to be rebuilt 22½ feet wide in the chambers. The plan No. 1, A. shews that when we renew the Locks, to make them 221 feet wide, we must introduce new timbers between the streak sills-these are represented by black lines. In order to retain all the depth of water in the Lock, we must cut down the streak sills 4 inches, and have only 7 or 8 inch timber between the old streak sills-(Note.-The plan for these timbers is drawn 4 inches too thick)—when these are laid and the whole covered with two thicknesses of two inch plank, the flooring will be of the same level as it now is for the lower gate. As to the upper gate, I should advise to raise the whole gate about one foot higher than the lower gate, and to place the mitre sill so as to leave a space of one foot between the bottom of the gate and the floor. In plan No. 2, the part called breast, above the recesses of the upper gates, is to be raised up to within one foot of the water line of the lower level, and by this means the head of the gates and Lock can be better secured. The greatest possible care must be taken to have the sheet pile plank 3 inches think, grooved and tongued, and well put down around the head of the Lock, by digging at least 6 feet below the bottom of the Lock and puddling, and also a second row in like manner under the upper gates. These two rows of sheet or plank piling, together with a row placed under the lower gates to prevent the water from getting underueath, unless it is already done in the old foundation, which is most probable, are ample security and nothing further will be required. The size I have adopted for posts, where the erection is upon the old foundation, is 18 by 12 inches, and placed as is represented on the plan; I have done this because the floor sills or foundation timbers are 5 feet from centre to centre, and I wish to reduce the space between the posts to strengthen the planking as much as possible.

The hollow posts for the heel of the gate, I would connect with the four other posts marked 7-8-9-9— (which should be jointed) by strong iron bolts passing through them, and secured by a screw and nut to keep them firmly together. These should be framed into good sills. The three posts at the head of the recess should also be strongly bolted together, and their foot entered into bottom timbers. All the posts should have dove-mil tenons let into the bottom or mnd sills, and securely keyed in by wedges. As, an additional security, I would, in the angle marked 16, place a triangular or arras piece, (i. e.) half of a timber 14 inches square, sawed diagonally through—this piece bolted through the post and into the floor by long ragged bolt spikes, 13 feet or more long.

The dry wall behind the Lock, I recommend to be built of flat stone from the mountain, which are the

only stone I saw near the line of Canal.

These stones can be procuted and laid up, I suppose, for \$1 50 cts per cubic yard, and perhaps something less.

For the sides of the Lock, I should use 3 inch white pine plank, well jointed and put up, and if any difficulty was found in leaks, I should caulk and pay over the seams every spring, just as the weather indicated an immediate opening of the Canal.

The dry wall should be laid on a line with the back side of the posts, and should be built so firmly as to rest on its own foundation and support itself,—also a bank of earth behind it. The posts should sustain themselves, except when the Lock was filled they might find support in two ties that run into the wall and are anchored there, and also in the wall itself: thus, though supporting themselves alone, they would find aid in resisting lateral pressure.

This kind of lock can be built in winter as well as summer.—The great care in this case is to have the sheet pile planking well done and in all the work fuithfully executed.

If this Canal were now to be undertaken, I should certainly recommend cut stone locks of the best kind; but should it be attempted at this stage, it would probably destroy the use of the Canal for two er three seasons, as cut stone locks can only be built in the season when there is no frost, or between 1st

May and 1st November.

If the question is asked how long the present locks can be kept up fit for use? I should say that they will fail one by one continually from this time forward, and that in all probability there will be none of them fit for use in five years more; a commencement ought therefore to be made to rebuild them as soon as possible, and continue rebuilding a number each year. There are many places where a lock entirely new can be built by the side of or near the present locks; in such case, this might be building anew in summer, and while the old lock was in use, and such lock could be built with cut stone if desired: which in a work of so great and increasing importance, I cannot but recommend.

I will now give the items of expense of a lock, if rebuilt entirely, with the exception of such parts of the old foundation as may answer.

.... \$ 200 00 Removing old work,..... 2,000 cubic yards dry wall, a \$1 50 cts.. 3,000 00 100 posts, 12 x 18, 22 feet long, ... 3,300 100 ties, 12 x 12, 12 do..... 1,200 do..... 900 do. 100 du. 650 800 feet anchor timbes, 10 x 10... 400 do. plates, 12 x 12, ..... 400 32 ps. floor timber, 8 x 12, a 36 ft. 768 er for various uses, say, .... 1,000

Sec Plan No. 1 & 2.

It is believed that this sum would build anew the sides of a lock 22½ feet by 110 in chambers, and put in new gates complete. These locks, when thus rebuilt, would last with no more than ordinary or small repairs, about 8 or 10 years, and whenever the upper part of the post decayed down to near the water line on the lower level, (which is as low as they will decay,) they may be renewed in toto, or they might be spliced by taking off the decayed part and putting on a sound piece instead and replanking the new part, which would restore their usefulness for years, excepting however the gates, which must be replaced once in 10 years, if constructed in the common way. I should advise, in making new gates, that the timber be cut in February and scasoned under cover; that great care he taken to make the joints well and put them together with the, oil and paint, and well coated over every year. I believe this course will make gates endure nearly twice the length of time they will without this precaution. It will be seen that repairing such a lock, with new posts in part and some new planking, will cost but a triffe. The greatest item of expense in repairs is the new gates, which is however, common to all, and will require to be done whether the locks are of wood or of cut stone. I cannot close this branch of the subject without repeating the caution to have the sheet pile planking most thoroughly done about the head of lock and upper gates, to prevent eny chance of water finding its way under or around in rear of the walls and undermining the foundation.

The present gates are very faulty in the bars, not being near enough to each other, and also in the size and form of the timber of which the bars are made; 14 by 18 inches is a suitable size for the heel post; the toe post may be 12 inches thick; and the bars, allowing for planking, should be 14 inches at the heel post; 16 inches in the middle, and 12 at the toe post—varying in the vertical dimension according to the depth below the surface or the superincumbent pressure: I have drawn a plan which will be readily understood, such as I would recentmend them to be built, remarking that the tenons and mortices should be made in the best possible manner to secure strength without relying too much upon iron.

The three locks below Saint Catharines which are 130 by 32 in the chamber, were originally intended for steam-boats, it is not probable they can ever be used for that purpose; when renewed, they ought to be reduced to the size contemplated for the other In the reduction, they afford a facility for rebuilding which does not appertain to the others. The face timber and such part of the old work as shall be necessary to make room for the dry wall can be removed. The size and extent of the floor timbers will afford every needful advantage for placing upright posts and securing them well. The present gates of these wide locks are very weak, as well as too unwieldy to be opened by a balance beam-I apprehend that they will give too much trouble, so much so, that I can almost advise to make these locks the same width as the others whenever the gates require to be renewed.

I have in Plans No. 2 and No. 4, given the ground plan and elevation of a lock, in accordance with the plan I recommend whenever the locks are to be rebuilt. The cost of such a lock on an entire new site

 $\mathbf{X}5$

Spikes, bolts, &c.,...

This sum would, I believe, build a good lock, and one easily kept in order 20 years, or until timber becomes very expensive; and it has the advantage over cut stone locks, in the fact that all repairs can be made in the season whilst there is no navigation on the Canal—which is the strong argument for building this kind of lock on this Canal at present.

Here follows a calculation for cut stone locks of the same size:

4700 yds. excavation of lock pit, @ 15cts, \$\\ \text{FEET.} \\ 42 Floor Timbers, 12 by 12, 56 ft. \\ long,	705 00
4,700	
4,700 feet timber, at \$5,	235 00 158 00 77 00 24 00

Laying filoor and sheet piling	300	00
2,300 cubic yards of cut stone mason ry, @ \$6	13.600	00
Gates, mitre sills, &c., complete,	1,600	00
Puddling, and banking lock,	500	00
	\$17,499	00
10 per cent for contingencies,	1,749	90
	\$19,248	90

This sum is sufficient to build good stone locks,—although I am not well informed as to the situation of stone of first quality for cutting. I have seen some near Lake Erie, and presume they are to be found within ten miles. In my estimate I have considered that one barrel of water lime, or five bushels, should be used to each cubic yard of masonry.

Having given the above items, as far as my knowledge of localities and circumstances will enable me to do so, I leave the correction to be made as advantages may be available, to cause a reduction in the cost.

I come now to the examination of the Feeder, commencing at Dunnville on Grand River—(four miles and three quarters from the mouth of the River)—being twenty miles and seventy-five chains, or nearly twenty-one miles in length. A dam to raise the water seven feet is thrown across the river at Dunnville, which, by raising the whole water of the river, occasions it to set back about twenty miles, over-flowing the banks of the river in many parts of this distance.

This feeder has a fall in the distance, of two feet—the descent is by regular off-sets of six inches each, in four different places,—though it appears that a part near Dunnville is only four feet; it has, however, generally five feet depth of water. I am informed that at stated seasons of drought it yields to the Canal but a scanty supply of water. In a Canal of this magnitude and importance, where vessels of 140 tons are to pass, I have before observed, that an inch of water is very material, and to ensure the greatest usefulness to the navigation, a certain supply must be relied on.

The Dam at Grand River requires to be made more perfect and safe by gravelling to prevent leaks, and securing the Western or South Western side. It is a most important inquiry, how we can obtain a greater supply of water for the main Canal?

Two plans have been proposed—one to raise the Dam at Dunnville one foot higher—the other to deepen and widen the feeder.—The original plan of the feeder was twenty feet on the bottom; forty feet top; and five feet water. From the information derived from Mr. Keefer, the Engineer, it appears that 51,485 cubic yards are yet to be removed, to give it the original width and depth, between the junction and the bend near Broad Creek, being 16 miles and 30 chains, and from thence to Dunnville, 4 miles and 45 chains, it is still more obstructed, by being both shallow and narrow in many places.

Considering the low situation of the ground at Dunnville; the great extent of land flooded above the Dam, and the low situation of the country below Dunnville along the feeder; and that the latter, by its overflowing, destroys much of the country for

a great part of the distance of seven or eight miles below Dunnville on the upper side of the feeder, I am decidedly of opinion that the feeder ought to be made 46 feet wide on the water line; 28 feet bottom and 6 feet deep, with slopes 1½ to 1, as the least capacity that will ensure a constant and uniform supply at all times.

If the feeder was finished according to the original plan, it would give 150 feet in a cross section, and if made according to the plan I now suggest, a cross section will be 222 feet.

If we take into consideration the reduced proportion of friction of the sides, and the increased velocity by reason of depth, the feeder when made 28 feet bottom, 46 feet top, and 6 feet water, will deliver water as much greater in quantity, than the original plan of 20: 40: and 5, as in the proportion of 7 to 4. The unfinished state of the feeder, and the water grass, operating greatly to check the velocity of the current, are causes which now impede the supply from passing down to the Canal. By deeping and widening the feeder we shall gain several important considerations:—

First. We shall obtain earth to form a berm bank, sufficient to prevent the water from overflowing the country on the side opposite the tow path.

Second. We shall ensure the safety of the dam at Dunnville, which is now as high as it ever ought to be for its own security, or for the welfare of the inhabitants adjacent to the River. If the height of the Dam could be somewhat reduced, it would be a great point gained. According to my calculations, if the feeder is made of the size I now propose, you can obtain a most abundant supply of water at the most severe drought, and the Dam may at the same time be reduced six inches.

The proper data are not within my reach upon which to give an exact calculation as to the quantities of excavation which will be required to make the whole feeder of the dimensions I recommend: but I can approximate to accuracy sufficient for our purposes. Mr. Keefer has given me the quantity which will be required to make the feeder its original intended size, from its junction with the main Canal to Broad Creek, 16 miles and 30 chains, viz.

51,475 cubic yards of excavation.

I have assumed, from the best calculation I can make, that it will require, in addion to the above, to make the feeder 46: 28: and 6: about—

350,000 cubic yards of excavation.

401,475 cubic yards at 12 cents, ..... \$48,177 00

This excavation should be commenced at Dunnville and extended down, or what would be better in working it, commence at the bend near Broad Creek, in order to give greater facilities in draining the work while excavating. Instead of making the descent in the bottom by off setts of six inches at a time, the bottom should be carried with a pretty regular descent, or at least it should be excavated deep enough to admit a full cross section of 222 feet.

By excavating the feeder the full depth, the growth of the water grass will be partially checked, which now occasions so much obstruction to the free passege of water.

It is impolitic in order to obtain a free admission of water into the feeder, to have the shoal part of it (and that most contracted) at its head; this part, if there is any difference, should be rather larger than the remainder, in order to receive a body of water into it freely; and care should be taken that the guard gates or guard lock should likewise not obstruct its free passage. To effect this, it may be necessary to have gates by the side of the lock, to be used when the water is low. I observed that, at Dunnville, the mouth or entrance of the feeder was entirely filled with saw logs; every thing of this kind should be prevented.

It has been stated by Mr. Keefer, that there is an appearance of quick-sand on some part of the feeder above Marshville. Should this prove very bad, it may be difficult to excavate the six feet depth, and in that case a greater width must be given to pass the 222 feet of water.

I have reflected upon the question, whether this feeder should not be made an 8 feet canal at once? There are some strong reasons for it; and many also against now entering upon the execution of such a project. Upon due reflection, to the latter I give the preponderance. I believe the excavation above proposed will afford earth sufficient to make a substantial and permanent bank on the upper or berm side, and at the same time prevent the present inundation of the adjacent country. If this should not be the result, the excavation should be carried to a greater depth, which aid the project of the enlargement of the entire feeder at a future period.

I think if the work here suggested was executed, the present, or even the reduced height of the dam, would be amply sufficient for feeding the Canal, and probably for the supply of all the present hydraulic establishments nearly the whole year.

Doubts have arisen in the minds of some respecting a sufficiency of water in the Grand River to feed the Canal. In order to be satisfied on that point, I examined the River 25 miles above Dunnville, where it is rapid and the quantity of water seen and determined to advantage. The River not being in its lowest state, however, I was obliged to obtain information from intelligent men who had known the River from 10 to 25 years. The result of my own observation, and of information from others, decided the question in my own mind, that Grand River will always furnish three times the quantity of water which can ever be wanted for the Canal.

The harbour at the mouth of Grand River was examined at the time of visiting the River. I found a pier or mole constructed by the Welland Canal Company, which appeared to stand pretty well. I observed a little repair necessary. To make a good harbour, and one that shall remain permanent, the present pier ought to be extended 150 to 200 feet further, and another should be constructed on the eastern side of the River, of 200 feet, to prevent easterly or southerly winds from forming a bar. These works can be built for 2,500 or 3,000 dollars, and when done, this will be one of the best harbours on Lake Erie; easy of entrance, and retaining 11 or 12 feet of water in its shoalest part. This being the naval depot of the Government on Lake Erie, it is on that account highly deserving of their patronage.

The Canal, agreeable to the original plan, was to have entered Grand River at Broad Creek (see Map'). The harbour at this place, Port Maithand, might be made of great importance to the Canal by pursuing the following course, (i. e.) to enlarge the present feeder to 8 feet depth and 58 feet breadth at surface, and connect it by a short cut to Broad Creek, entering Grand River by a lock. The cost of this would be something like the following:—

90
65
.00
00

\$141,170 55

This sum would probably make this part of the work correspond to the original plan, and besides furnishing a more abundant supply of water for the Canal, one very great advantage would result from this expenditure, in the fact that by thus making it a main channel, it would allow vessels to pass through the Canal by one or two weeks earlier in the spring than the ice will permit them at Port Colborne.

Another plan has been spoken of, which is to enter Grand River by a lock at Dunnville. In pursuance of this plan, should the feeder be deepened 8 feet from Dunnville to Broad Creek, the expense would be much the same as that for the previous plan, and but one advantage attends it, that by an enlargement of the entire extent of the feeder, a great body of water would be admitted into the Canal, whilst on the other hand, it would render the route for the passage of vessels more circuitous by 6 or 8 miles.

The harbour at Port Colborne or Gravelly Bay, I thoroughly examined, and furnished with the soundings and positions of the shoals, &c. Nature has done much for this place, as a harbour, in giving good bold water—locked in by a reef running on each side, and a shoal formed so as to render an advantage in the protection it can be made to give. I have given a sketch of the harbour:—

Pier A is now being constructed, and is intended to be 1,200 feet long, built of timber 18 feet wide and filled with stone. The estimate for the work is about \$10,000, which appears the fair cost as now building.

In addition to this, to make it a Harbour where safety can be found and security against every wind, I would advise to build another pier 250 or 300 feet long against the shoal at B, and on the northern front of it, but so as to leave good water within it. Such a pier would cost about 4 to 5000 dollars. It should be formed with a good ice breaker at the end, which is done by facing it with strong timbers laid on at an angle of about 45 degrees, to permit the ice to slide upon the timbers whenever moved by the wind; at some future day, when the extent of trade will justify it, and that time will soon arrive, there is no doubt that a pier commencing at C, and running to a point 100 feet from the ensterly end of pier B, will be made; but if the piers A and B are now made, a Steam Bout or vessel can always lie safe in any wind.

I consider the plans pursued to make a Harbour at Port Colborne to be judicious, and when accomplished, it will be every thing which can be expected as a good Harbour; safe and sufficiently spacious for a long time to come, and easy of entrance in the worst of storms.

The Harbour at Port Dalhousie, I have also examined and feel much at a loss how to remedy the faults which I think have been made in the relative position of the piers. There are two piers running not quite parallel, but nearly so; they are about 60 feet apart at the foot of the Lock, and 100 feet at their outer end; and after being carried out about 300 feet, terminate in about 9 or 10 feet water, at the lowest stage of the Lake.

The great error has been committed in the proximity of the two piers, they ought to have been 250 or 300 feet apart, and I see no way to correct the error. The Lock ought to have been placed at Pawling's Point, which is 60 rods higher up than its present location, and this, if now done, will correct some of the inconveniencies of the present plan, and enable vessels entering this Port in a storm to come to without injury.

It is said Mr. Pawling will remove the Lock, and re-build it at the place pointed out above, for ten thousand dollars. If he can do it for this sum, it will be money well expended to have it done; and also at the same time to provide a copious waste below the Lock, that all the flood waters may pass into the channel and sweep out every thing between the piers. Such a plan of waste will do much in removing obstructions and keeping the channel open.

If the lock is removed, and the piers extended about 200 or 250 feet further, it is said you will then have 14 feet water;—this is a depth which can never be much disturbed by the waves of the lake. I I should advise to have the piers gradually recede from each other, so as to be 175 or 200 feet apart at their outer end. The expense of this extension, if made IS to 20 feet wide, of timber and stone, in the same way as the other part will be from 7 to \$9,000. These two alterations would make the harbour a tolerable one; and I should think a steem-boat or vessel might enter in a storm very safely.

It has been suggested that I should advise as to a a plan of wooden culverts, intended to drain the swampy grounds slong the canal, and where the head or pressure of water would be very considerable whenever the water is drawn out of the Canal. In all cases where the culvert is to be immersed in water, wooden culverts are durable and much cheaper than stone, and are indeed better, if rightly constructed; because stone culverts, in a case of the kind I have stated, would burst with the head of water forcing it. The manner of constructing such culverts is, to have clamps of scantling well framed together, and keyed up strongly on the outside. Any mill-wright who has ever made what is called a pert stock, to convey water to a mill, will understand it perfectly. The whole consists in planking the inside of a strong square frame of such size as shall be thought advisable to suit the case. I have had them made of S or 10 feet square, and conveyed water of the level of that in the Canal, but shut out from it, under the Canal, making it rise again and pass off to a large manufactory. The plan is simple, and only

requires one precaution; that is, to have collars of sheet pile plank run under the bottom, around the sides, and over the top, 2 feet wide all around, directly under the centre of each culvert. The plank may be driven as ordinarily, and the sides secured to a cross piece at top and bottom. The object and design in this is to prevent the water in the Canal from finding its way to the culvert and following the planking, thereby cause a breach in the bank.

To guard the use of the water power which the Company have conveyed to individuals, I think, wherever used for hydraulic purposes, there ought to be a regulating waste to rise within two or three inches of the water line intended to be preserved.—By having this regulating waste of sufficient length, a quantity of water, abundant for mill purposes, will pass over without detriment to navigation. If the mill owners are not thus controlled in the too frequent use of water, the Canal will suffer. It is well known to Captains of vessels, that want of an inch of water may cause considerable detention; and mill owners should not impair the usefulness of the Canal.

In regard to stop gates to secure against breaches, or for facility in draining the Canal when necessary, I should certainly advise to have a stop-gate put as near to Port Colborne as a good bottom can be found. If rock bottom can be found within half a mile, or about that distance, I should place a stop or safety gate at that place, at the time the Canal excavation is going on. Another ought to be made, just beyond the aqueduct, to secure against any breach about that work.

I will now recapitulate the several items of expense which I consider first of all necessary:

Which I consider liest of all necessary		
Making Port Colborne a good Har- bour-say	\$16,000	00
Excavation of Canal from Port Col-	38,206	40
Excavation between junction and Port Robinson	14,111	20
Transmin of Deep Cut.	9,680	00
Securing the Canal from wash or spon	1,200	00
Deepening and widening feeder to a depth of at least six feet.	48,177	00
	\$127,374	60

If thought unadvisable to give the Canal the 36 feet bottom and 60 feet top then from this we deduct

50,020 yards excuvation, @ 20 cts. 11,000 yards rock, @ \$1	\$10,004 00
36,000 yards excavation, @ 16 cts. 12,500 yards excavation, @ 40 cts.	5,670 00 5,000 00
the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract o	

\$127,374 60—less—\$31,764 00

Which leaves the sum of.....\$95,610 60 to make this part of the Canal according to its original plan. It however advise to have it excavated the full width of 36 feet bottom; and I have never found any great danger of banks sloping 1½ to 1, or 33 degress from the horison, giving way so as to do any gress from the horison, giving way so as to do any injury—more particularly in a Ship Canal, where the wash of the banks from rapid motion does not occur; which, if it should happen, would still be no serious disadvantage.

If to the first sum we add what will secure the banks at Deep Cut, \$20,000,—say for \$150,000 all this can be accomplished.

Next to these are the repairs or renewal of Locks. There are 38 Locks on the main line of Canal, and to repair them according to one estimate, saving the old foundations, will cost each, \$6,800. As the Lock at Port Colborne is new, and is built different from the others, being backed up with stone, I do not include that Lock, and will say 37 Locks, @ \$6,800 each, = \$251,600.

The calculation being made for a Lock of 10 feet lift, I believe the estimate as above will also cover the removal of the Lock at Port Dalhousie up to Pawling's Point, if it can be done, for the sum which has been previously named, and a saving may be made in each Lock by using the old timber in bottom, under the walls of stone, where it will be immersed in water.

The expense of extending the piers at Port Dalhousie, which I have estimated at \$7,000, I do not include, as that item will depend on the question whether the branch is to be made to Niagara River.

I have examined Mr. Barrett's report of the expense of a branch from the present Canal to the mouth of Niagara River.

It appears from this Report that two plans are proposed and estimated for by Mr. Barrett.—One commencing at the head of Lock 31, and descending to Niagara River; the other commencing at the head of Lock 18: at 2 miles and 62 chains it joins the other route. (See Messrs. Barrett and Keefer's Report.)

Messrs. B. and K. have not given the items of expense which form the cost of each of these routes, a circumstance much regretted by me. It appears that the ground is generally very favourable, and they have estimated the total cost of the

It was unfortunate that the details of these estimates were not to be obtained before I left the Welland Canal. Learning from gentlemen that Mr. Barrett had made such surveys and estimates, and having known Mr. Barrett for many years, I was induced to hope they might be found, and save all the expense of making another survey. I am, however, much disappointed in not finding the items of expense of excavation, the expense of Locks, &c., which, after seeing the general formation of the country, would have given me the means of making up an opinion as to the accuracy of their estimate.

I have previously given an estimate of what I should consider the expense of a cut stone Lock; but if I understand Mr. Barrett's Report, he did not intend to have any thing better than rubble work, except at Niagara; and I see that he only intended 100 feet between the gates, whereas I have 110 feet.

Upon my plan of cut stone locks, built in the best manner, I make them cost each, . \$19,248 00

Hanger Best was a contribution of the

\$466,464 00

On the Southern route,

31 locks at \$19,248,........\$596.688 00 123 miles excavation, bridges, cul-

verts &c., at \$10,000,..... 127,500 00

\$724,188 00

If the other plan of building locks should be adapted for this case, (which I do not recommend) the calculation would stand thus:

18 locks, at \$9,663, is.....\$173,924 00

12 miles canal excavation, bridges, culverts, &c.

120,000 00

\$293,934 00

It may be said, that with locks of this kind, 300,-000 dollars would make the branch on the northeren route-(See map of the Country.)

The one advantage would accrue from proceeding immediately to construct this branch, viz: that it might be finished in two years after contracts were made and a good navigation secured, before many of the other locks below the junction of this Canal would give way, so as to require an entire renewal.

Taking into view the situation of the Welland Canal, the comparative security of the harbor at the mouth of Ningara, and the advantages to the town of Ningara, as a commercial place—these, and many other considerations of much weight, induce me to recommend very strongly this branch to be made.

If the question is asked-why not adopt for this Canal a corresponding size with the intended Cunal and locks in the proposed improvement along the Saint Lawrence to Prescott?—to this I reply, that the great amount of lockage, and the great expense of such large steam-boat locks—the doubts whether steam will ever take the place of sails on these lakes on the contrary, a present belief that the latter will always transport nearly all the products of the country on these inland seas-all determine my mind that the locks ought not to be at this time any larger than the plan for the Welland Canal, viz: 24 by 110 feet.

In concluding my report upon the Welland Canal, my duty leads me to a few remarks upon the present importance of the whole work, and more especially its thousand-fold prospective usefulness; at this latter point, you will perceive I have particulary arrived in the formation of my plans and estimates.

North of the 37th degree of latitude, and east of the Rocky Mountains, is a vust expanse of country, capable of sustaining a population of 50 millions; and which in 25 years hence will have a population of more than 10 millions. With this rapid and mighty increase of population adjacent to the shores of the Upper Lakes and their tributaries, to what direction shall we look for an outlet for their surplus products?

The three general outlets are: 1st. To New Orleans by the way of the Mississippi. 2d. To New York by the way of Canada, and the Hudson, and such railroads as may be made auxiliary thereto. 3d. To Montreal and Quebec. To the first, the insalubrity of the climate is an insuperable obstacle to a regular trade. It is one of those natural impedi-

ments which there exists no way of fully counteracting, although the introduction of steam vessels on that River and its tributaries will do much to alleviate this disadvantage, still the trade inclines to seek We see this its connexion with some other quarter. in the fact, that the Eric Canal, in the short period of its use, is even now thronged with boats, a small part of which are as yet the transports of the products west of Buffalo, and complaints are made of the insufficiency of this channel. Of the several cities on the atlantic border, I have mentioned New York only: her vast superiority in local position and other natural advantages, will ever give her a com-manding influence over the trade of the interior, compared with her sister cities. Pennsylvania, it is true, is doing much for her commercial emporium, but the elevated region she is compelled to intersect is a great obstacle to her efforts. Thus between N. York, Montreal and Quebec, more of an equal competition will ensue for the trade of the upper country. Had it been possible to attain any thing like as easy a communication as the Welland Canal between Lakes Erie and Ontario on this side of Ningara River, the natural jealousy of a commercial rival would have interfered. So that, fortunately for your Government, Gentlemen, you are in the possession of the power to prevent an entire monopoly of the trade alluded to.

The cheapness of transportation, via Lake Ontario to Montreal, is a decided advantage, and not easy, if at all, countervailable. It only remains to he seen how far the policy of your Government, with respect to this work, will correspond with the object to be attained. We may set down as certain, to Montreal the trade of the country adjacent to Lake Eric, lying within the precincts of your government; and to this may we not add one half the trade of Ohio, Indiana, Illinois and Michigan. Is it not then correct to say, with the Welland Canal in good order, the commercial importance of Quebec and Montreal will be doubled? The jealousy and apprehension above adverted to, of a diversion of trade from New York down the St. Lawrence, has long existed; in proof of which, I need only introduce a paragraph or two from a report made to the Legislature of the State of New York, by the Canal Commissioners, March 2d, 1811. Two routes had been suggested to obtain the trade of the West-one, the direct communication to Lake Erie now adopted—the other, a cut round Niagara Falls, and from Albany by Rome to Oswego, terminating the Canal there. Notwithstanding the limited pecuniary resources were at that time a great impediment, still, on a comparison of the cost and obstacles of the former with the latter, they put the interrogation.—" Whether, it being less difficult and expensive, it would not be advisable to descend into Lake Ontario, rather than encounter the difficulty and expense of the other course ?"-to which they reply:-

"The Commissioners believe it would not: and, " without relying, as they might, for support of their "opinion on the comparative expense of transporta-"tion, it is sufficient to say, that articles for expor-tation when once affoat on Lake Ontario, will, ge-"nerally speaking, go to Montreal, unless our Bri-tish neighbours are blind to their own interests; a "charge which ought not lightly to be made against "a commercial nation."

"Freight from Ningara to Oswego, will, from the "difficult and dangerous access to that harbour, be "as high as to the head of the rapids in the River "St. Lawrence. The descent from thence to Mon-" treal is less than the ascent from Oswego to Rome. "It is true that Lake Ontario is estimated at 196 " feet above tide water; and the Rome level only "184 feet above the lake; but there is a considera"ble descent in the River St. Lawrence, in a distance " of about 70 miles to the lower end of the present "sloop navigation, through which the current is sometimes very strong. There is rlso a consider-"able descent from Montreal in a distance of about 30 miles, to tide water in the Lake St. Peters. "Perhaps it will be found that an average allowance "of 3 inches per mile (in the whole, upwards of twenty feet) is not too much, and that the river at "Montreal is not one hundred and seventy feet be-"low the upper surface of the Gallop Rapids. In "the distance of one hundred miles between these "places, there are forty of still water, viz: about "thirty in Lake St. Francis, between the foot of " Longue Salt and the head of the Coteau du Lac "rapid, and upwards of ten in the lake of two mountains, between the foot of the cascades at the "Cedars and the Lachine rapid. Thus there will remain "but 60 miles of canal, with an average fall of 34 inches " per mile. The land descends proportionately to " the water, so that there can be but little deep cut-" ting. The soil is easy to dig; there are no streams " or ravines of any consequence to cross, and there " is an inexhaustible supply of pure water, which " never varies much in its height, for any Canal " whatever.

"Under circumstances so propitious, it is probable that a good sloop navigation from above the
gallops to Montreal, would cost less than a good
boat navigation from Oswego to Rome. The extent of this last, deducting Oneida Lake, is 56
miles. The fall is on an average, near 40 inches
per mile. The supply of water is doubtful; and
in 12 miles of the distance, obstacles almost insurmountable present themselves.

"These are facts to which it would be vain for the citizens of the United States to shut their eyes. The eyes of a rich, enterprising, com-"mercial rival are open; and when it is considered " that (if the means of easy export be supplied to the "inhabitants who may settle near the lakes) that "country will in no distant period, furnish a more "abundant stock of commodities for foreign trade, "than is now sent from all the atlantic ports of the "Union; it would be absurd to doubt, whether, in "the competition for that commerce, our neighbors "will employ the means in their power. Nor must "it be forgotten, that the revenue which, under pre-"sent circumstances, is raised from commerce, and "which no probable change will reduce below an "ad valorem duty of 10 per cent., cannot but oper-"ate in favor of our rivals. True it is, that, so far "as regards the pecuniary benefits of those who may "settle along the lakes, the routes by which their " products are sent abroad, and their supplies of foreign articles introduced, must be to them a matter " of little consequence; but the political connexion "which would probably result from a commercial "connexion, certainly deserves the consideration of "intelligent men."

Although there are some errors in the statement here made, in regard to descent of water, and some want of knowledge of the lake of two mountains, as now understood; I have inserted it to shew the views of those gentlemen at that early day, as to rivalship of Montreal and Quebec.

I have the honor to be, Gentlemen,

Very Respectfully,
Your Obed't Servant,
BENJAMIN WRIGHT.

New York, October 3, 1833.

Having written the foregoing, and time not allowing me to make any alterations previous to a necessary departure from hence, I have received in the mean time Mr. Barrett's report of items of expense on the branch to Niagara.

If Mr. Barrett is correct in his amount of excavation, embankment, &c.—I am in error as to the expense of that branch to Niagara.

I see Mr. B. averages all the items of excavation, embankment, bridges, waste wiers, acqueducts, culverts, grubbing, &c. at about 12 or 13 thousand dollars per mile, but his locks only \$6,600 each.—These are exclusive of the 10 per cent. for contingencies. The prices at which he puts excavation and embankment must be very ample, and a little more than I should think it would cost under good management.

I make these remarks in explanation, and to guard against any disappointments in my estimates, as I wish that the public should not feel that any thing is attempted to be concealed,—or not fairly estimated at its real cost.

I will now give another view of the expenditure which I think ought to be provided for, so is to make the annual repairs and improvements come within the least proper and reasonable means.

1st. The expenditures which are absolutely necessary the present winter and spring, are,

Widening from the junction to Port Robinson, 52,195 yards, a 16 cents, \$ 8,351 20 16,000 00 Finishing piers at Port Colborne ..... 1,000 00 Gravelling dam at Dunnville, say,... Repairing ends of locks, say 12, a \$250 3,000 00 each.... Note.-This is only to make them last as long as possible, and to be prepared by contract to procure suitable materials at a future day. 1,200 00 Spoil Bank, .... Contingencies for lock-gates, &c. say.. 4,000 00 \$33,551 20

This being done the navigation will be kept open through the season of 1834.

For the fall and winter of 1834-35, there should be provision made for widening feeder in all parts where the dimensions are not 40 x 20 x 5, say,... \$8,000 00

Widening main trunk from junction to Port Colborne, thus:

45,932 yards, a 26 cents, S,020 do. (rock,) Deep Cut, expend say	9,186 8,020 \$ 9,680	40 00 00
Repairing another set of 12 Locks as before	3,000 4,000	00
This year, I think at least four new locks should be built at \$6,800 Extending piers at Port Dalhousic, say.	27,200	

\$79,086 40

Note.—I have said \$8,000 for widening the feeder, because I believed it would be better to deepen some part to the depth of 6 feet, and the width I have recommended to shew the effect in part upon the current; if there is half a mile upon one continuous piece, it will be a good opportunity to test the velocity of water in the 6, 46 and 28 fect feeder, and from such an experiment much information may be gained as to the correctness of my views in regard to the height of the dam at Dunnville.

The above being completed, there would remain to be provided for:—

The widening and deepening of the feeder	42,000	00
Ditto of main Canal	31,764	00
Sloping banks at Deep Cut	20,000	00
Canal from Broad Creek to mouth of Grand River	26,236	
The fooder to 8 feet	66,756	90
33 new locks at \$6,800	224,400	00

\$411,157 55

These would be attended to from year to year, as the appearance of sustaining the navigation should seem to require, and probably all the locks would have to be renewed, except that at Port Colborne, within four years. The time for the excavation of the feeder to an equal depth with the main Canal, might be extended to 3 or 4 years, if it was thought advisable, or even longer; but I think when once undertaken, it should be prosecuted and completed, beginning at one end and pursuing regularly so as to require no removal of water from the part finished.

I cannot close without adverting to the use of water at Marshville for hydraulic purposes. There is but a small portion of the year when these mills can be permitted to move without injury to the Canal. It is certainly proper to dispurage any further erections of hydraulic works at that place, as the time will soon arrive when the use of the Canal will be so great as to require all the water at a low season; and the drawing off any portion at that place, by interrupting the flow or velocity of the current at that point, is an evil beyond the quantity of water taken, as it reduces the head of water and checks the flow of the remainder very greatly. The injury may not be so great when there is a flood in the Grand River; but there ought to be a diminution instead of any increase of hydraulic works both at Dunnville and Marshville.

No. 3.

# THE WESTERN TRADE.

TO THE MERCHANTS OF NEW-YORK,-

The struggle for the commerce of the great west, now evidently existing between the States of New York, Pennsylvania, Maryland, and the Canadas, emboldens an old merchant, who once was a member of your community, to address you a few brief remarks, which, during some years of observation and experience in the North Western parts of this State, have impressed themselves on his mind as incontrovertible truths. Receive them as such I pray you; and believe him when he assures you that it is his sincere conviction that the plan he proposes to you is the only one by which you can effectually and permanently secure the Western Trade to your city. Read, examine, and judge for yourselves.

The time is not far distant when your own, and the eyes of the people in general will be open to their true interests on the subject of inland navigation. The doctrine "that rivers and lakes are only made to be feeders for Canals" is fast losing ground. An expected rise of lands, and the money spent in the districts through which canals are made, are generally the great inducements to keep truth from the public. I do not mean to say that the Canals already made and contemplated to be made are not beneficial; but I do assert that the money spent on them, and particularly that spent on the Erie Canal, could have been laid out to much greater advantage by making a steam boat navigation via Oswego river, &c., to Albany and New York-by connecting Lakes Erie and Ontario—by improving the navigation of the Genesee and Seneca rivers, &c. If this had been done, the State of New York would have gained doubly the advantages the Erie Canal has afforded.

I prophecy that New York will yet have to make such a navigation in self defence. The Canadas have become wide awake to their true interests. They have begun to move, and that great and fertile country (hitherto misunderstood by all the world, and particularly so by the English Government) has within the last five years, made more rapid progress in wealth, population, and improvement than it has done for 50 years previously. Some gigantic works have been begun and completed; but the same short sighted policy that created a canal of 200 miles running parallel with one of the greatest lakes in the world (Lake Ontario) within an average distance of only fifteen miles, has also produced their Rideau Canal at a cost of above six millions of dollars-running parallel with the St. Lawrence, the outlet of our inland seas, at a distance of only a few miles. It proves not to answer the expectations entertained for the purposes of commerce, although it is said that in a military point of view it promises all that was anticipated from its construction.

The Welland Canal, connecting Lakes Ontario and Erie, built by private enterprise for the navigation of schooners drawing about 3 feet water however has destroyed the delusion of the Canadas. They now look to the St. Lawrence as the means of realising their golden dreams of drawing the commerce of the great West to Montreal and Quebec; and they will not be disappointed in their most sanguine expectations unless you prevent them. Less than three

millions of dollars will open a steum boat navigation from Lake Superior and all intervening waters to Montreal and Quebec. Can you suppose that the ditches and railroads connecting Lake Eric and the Hudson, the Monongahela and the Susquehannah, the Ohio and the Chesapeake-can and will prevent the trade of the west from following this grand natural highway? No, nover. Expend your tens, your, hundreds of millions, it is in vain! Take off all the tolls on your canals, and it is still in vain! If you tolls on your canals, and it is still in vain! merchants of New York wish to keep the trade of the west-make a steam boat canal around the Falls of Niagara; make the Oswego, the Oneida Lake, and the Mohawk navigable for steam boats, and you will secure it to your city.-All this I assert can be done for a less sum than the Erie Canal has cost

Cupidity, littleness of mind, and mean political considerations-1 know it-are strongly against this plan, but when the mischief is done, then you must, you will adopt it-perhaps too late.

A great deal has been said about the dangers of the lake navigation. False reports have been and are continually raised, and small accidents aggravatod into disasters. The same story is renewed a half a dozen times, and as often displayed under new colors, so that at last you have been made to believe that there is nothing but storms, ice, and disasters on the lake! and hence you are told that ditches must be made!—The great Ohio must be connected with the Hudson by a Ditch!—Can it be, when such mighty waters have been furnished by nature, and as it were within sight of magnificent rivers, holding forth their hands to be united with them, that a ditch is to be the channel of communication between the great Hudson and the mighty Mississippi ?

Cunning speculators and selfish politicians tell you that the Lekes are navigable only during part of the year. True they are so, say, from the beginning of April to the beginning of December, (I speak here only of Ontario and Erie) and that therefore they wont do. But I ask will Canals do better ? No, not a jot. The same causes operate still more to the prejudice of the Canals than to the Lakes. But should this argument be worth any thing, why not make a Canal through the valley of the Missisippi? During liow many months of the year are its streams unfit for navigation, when on account of the lowness of the water all trade is suspended? You will find that the difference in the feasibility of these two great routes, the one on account of winter, and the other on account of summer, is not very great-nay scarcely worth mentioning.

As to the risks of Lake navigation for Steamboats, it is, to say the least, not greater than that of the Missis ppi; the Ohio, dec, where snags and other sunken impediments have destroyed more Steam Boats than any where in the world. Why not construct a ditch in lieu of making use of these dangerous Rivers? Besides, these ditches through the valley of the Missisippi would probably have the advantage over the northern ditches, that they would never freeze, and of course could always be used

The risk of Lake Ontario during the months of navigation, I am persuaded is not greater than that of Long Island Sound. The best proof is that since Steam Boats have been introduced on the lake (and there are now between thirty and forty large and small on Lake Ontario) there have been but two

Boats lost, viz: the Martha Ogden in the summer of 1832-a miserable old Boat of about 30 horse power belonging to the port of Oswego-and the John By, belonging to Upper Canada, during this summer .-The John By was a botched concern from the beginning, and neither she nor the Martha Ogden would in fact have been looked upon as seaworthy or as insurable vessels at the time they were lost.

What regards Lake Eric-although it is more dangerous than Ontario on account of its shallowness and great exposure to the winds-yet I should consider that the insurance risk during the months of May, June, July, August, September and October does not exceed the average risk of navigation during the year between New York and Boston.

To shew you the natural consequence of the St. Lawrence being made navigable for Steam Boats, I will here state to you at what rates the articles of wheat, flour, pork, and ashes, the staples of the great West, have this year been delivered at Montreal, at Oswego, and via. Oswego at Albany and New York from Cleveland, at the mouth of the Ohio Canal.-They are thus:

At Montreal through the Welland Canal, by Lake Ontario and the St. Lawrence, a distance of about 650 miles :--

A bushel of Wheat, at 18 cents.

A barrel of Flour, at 60 cents.

A barrel of Pork, at 90 cents.

A ton of Ashes, at \$7.

At Oswego through the Welland Canal, a distance of about 350 miles:

A bushel of Wheat, at 10 to 121 cents.

A barrel of Flour, at 2s. 9d. to 3s. A barrel of Pork, at 56 cents.

A ton of Ashes, at \$3 50.

At Albany, by way of Oswego, a distance of about 560 miles :--

A bushel of Wheat, at 26 to 284 cents.

A barrel of Flour, at 86 to 93 cents.

A barrel of Pork, at 130 to 135 cents.

A ton of Ashes, at \$8 50.

At New York, by way of Oswego and Albany, a distance of about 700 miles:—

A bushel of Wheat, at 29 to 311 cts.

A barrel of Flour, at 98 to 105 cts.

A barrel of Pork, at 150 to 155 cts.

A ton of Ashes, at \$97 to \$10.

Making, the vast difference in favor of Montreal, against New York, of 11 to 131 cents per bushel of Wheat; of 38 to 45 cents per barrel of Flour; of 60 to 65 cents per barrel of Pork; of \$2 75 to \$3 per ton of Ashes.

Permit me to draw your attention particularly to the great difference in price between Canal and River, and Lake navigation; for instance—a bushel of Wheat from Albany to New York in Sloops, Schooners and Tow Boats, a distance of 150 miles, is carried for 3 cents, the same bushel of Wheat, on the Canal, from Oswegonto Albany, & distance of 209 same bushed of Wheat is brought in Schoolers through the Welland Canal (where it pays 11d or 2 cents toll) to Oswego, a distance of near 400 miles, for 10 to 12d cents. miles, is carried for 16 to 18 cents ; and the very

Do not deceive yourselves with the idea that the "great Emporium" offering such ease and facilities to the man of business in selling and buying can long withstand the vast difference in favor of Montreal, when once vessels loaded at Chicago, Green Bay, Detroit, Sandusky, Cleveland, &c. can carry at a still less rate than aforementioned, a Cargo direct to Montreal, without breaking bulk,—Mind that—without breaking bulk, Besides, let us look at the difference of time it will take to transmit produce to Montreal and New York.—Let the obstructions in the St. Lawrence be removed, and it will not take one third the time to Montreal that it will to New York.

Take off all your Canal tolls, and still there will be a vast difference in favor of Montreal. All your efforts are in vain, -you must give up the ditch policy and adopt one more in unison with the grandeur and magnificence of the great waters with which nature has blessed the State of New York! You must make the steamboat communication between the Hudson and the Oswego in self desence: for if you do not do it the produce of the great west must and will inevitably go down the St. Lawrence. must make a steambout channel around the Falls of Ningara; for if you do not the Canadians will. ready are schooners carrying from 3500 to 4000 bushels of wheat sailing with case through the Welland Canal (although not yet perfected) and this very day while I am writing, (November 19) a schooner laden with wheat arrived here (at Oswego) from Sandusky in less than four days!

Our countryman, Judge Wright, has been employed by the Canadian Government in making surveys of the St. Lawrence, and is now preparing his reports for the next session of Parliament at York; seventy thousand pounds have last year been voted towards the improvements on the St. Lawrence.

The Welland Canal will most probably pass from the hands of individuals into those of the Government: negotiations between the parties having, it is believed, already taken place.

AN OLD MERCHANT.

No. 4.

# MINUTES OF THE BOARD,

13th Feb., 1833.

At a meeting of the Board of Directors, held at the Parliament Buildings, York.

PRESENT:

Alex. McDonell, Vice President,

Wm. Chisholm, and Wm. Elliott, Esquires.

The minutes of the last meeting were read and approved of.

Wm. Elliott & Wm. Chisholin Esquires having been appointed by the House of Assembly Directors for the present year, took their seats accordingly.

The first subject that came under consideration of the Board was the raising of money to pay the debts due contractors and others.

The petition to the Legislature praying for aid was favorably reported on by a committee appointed to investigate the affairs of the Company, a copy of which is attached to those minutes, and the Board can only express their regret that the House of Assembly did not afford them the necessary aid to pay off the debts the Company have incurred to finish the work.

However as the Legislature have made an appropriation of £7500 to purchase stock, and have appointed Messrs Macaulay, Robinson, and Shade to expend the same,

The Board requested that the Agent and every other person belonging to the Company, will afford every necessary aid and information to carry the same into effect.

In the mean time the minutes of Council respecting the relinquishment of the Government Mortgage on the Hydraulic situations were read, and in compliance with the term of the conditions therein expressed, it was—

Resolved, That a bond be made out by the Company pledging them to lay out the money which may be obtained on the security of the Hydraulic works in payment of the debts incurred and the remainder applied on the line of the canal.

That a memorial be presented to His Excellency the Lieut. Governor, praying that His Excellency will authorize the Attorney General to make out the necessary instrument to relinquish the Mortgage held by His Majesty's Government on the Hydraulic works on procuring a bond from the Welland Canal Company that the money raised on the Hydraulic security shall be applied in payment of the debts due by the Company and the residue is placing the works on the Canal in a state of perfect repair, the following is a copy of the memorial to be presented to His Excellency the Lieut: Governor.

To His Excellency Sir John Colborns, K. C. B. Sc.

The memorial of the Welland Canal Company most respectfully represents—

That the minute of Council has been made authorising the relinquishment of the Hydraulic situations on condition the Company will give a pledge to expend the sum on the Canal and Feeder—but does not express the payment of debts already incurred amounting to about £11,000.

Your memorialists therefore pray Your Excellency will be pleased to direct His Majesty's. Attorney General to draw out the release on the security held by His Majesty's Government on those works, on receiving a pledge from the Welland Canal Company that the money shall be applied in payment of debts now due by the Company and the residue in completing the Canal, and as in duty bound will ever pray.

Mr. Merritt having notified the Board that his services will be no longer required by the Company after settling up the accounts,

Resolved, That due notice be given that all demands against the Company be presented on or be fore the first day of May next, and in the mean time that Messrs. McDonnell, Creighton, and George Keefer Esquires compose a committee to examine

and report on the same for the decision of the Board and will meet ut the Canal Office in St. Catharines on the first Wednesday in June next, and there to remain until the affairs of the Company are finally settled and disposed of.

Resolved, That the Agent be authorised to negotiate with and see every individual having claims for damages, and if the Committee approve thereof settle the same before coming to an arbitration.

Opening the Canal by the Ist, of April being a subject of the greatest possible importance to the interests of the Company,

Resolved, That the Commissioners appointed by the Legislature communicate their views and intentions on that subject that a mutual understanding and cordial co-operation should exist for its accom-

Remlocd, That a meeting of the Board at the Canal Office take place on the first Thursday of next month at the usual hour.

A letter from Absalom Shade having been read respecting his claim for damages by determion on the Canal last yew.

Resolved, That Mr. Shade be paid in future tolls, such sum as the Committee may think fair, after examining the claim which is not now before the Board.

The draft of a Report for 1832, was submitted by

the Agent.

Resolved, That the same be approved of, and is ordered to be printed.

February 27th, 1833.

At a Meeting of the Board of Directors, held at the Canal Office, St. Catharines.

PRESENT:

Alexander M'Donell, Esq., Vice-President. William Elkott, William Chisholm, and Thomas Butler, Esquires.

The minutes were read and confirmed.

The application to the Bank of Upper Canada being read, and the answer thereto, it was Resolved, to summon a general meeting of the Board on the morrow to adopt some measure to provide means for paying off the demands.

That Captain Creighton and George Keefer, Esquire, be summoned forthwith, and a messenger

be expressly sent to deliver the same.

The Board then adjourned to meet to-morrow.

February, 18th, 1833.

Pursuant to adjournment the Board met at the Canal ffice.

PRESENT: Alexander Y. McDonell, Esq. Vice President. George Keefer,
Captain Ogden Creighton,
Thomas Butler,
William Elliott, and William Chisholm, Esquires.

The last minutes being read were approved and confirmed.

1st. Resolved, That the correspondence with the Bank of Upper Canada be recorded on the minutes to shew that every exertion has been made by the Directors to obtain money to meet their engagements and prevent the expenses of litigation which must inevitably follow if money is not provided.

The Board cannot help expressing their surprise that the Directors of the Bank should refuse accommodating the Compacy with so trifling an amount after having made so large a sum out of the operations of the Company.

In order to obtain the amount necessary to pay off the debts due by the Company,

Resolved, That the mortgage held by the Com pany, the relinquishment of the mortgages held by His Majesty's Government and all necessary papers be made out by Mr. McDonell, and procured accord-

The estimate to the 1st of November was examined and approved.

Resolved, That an application be immediately made to His Excellency Sir John Colborne, to declare the Port at Gravelly Bay now open, the work being so far finished as to warrant the application and to be called Port Colborne if it meets His Excellency's approbation.

A letter from the Hon. John H. Dunn, being read, tendering the resignation of his situation as President of the Company,

It was unanimously Resolved, That a communica-tion be made in reply to Mr. Dunn, complimentary as to his services as President—and that the Board cannot at this time admit of the acceptance of his resignation.

1st. Resolved, That a communication be made to the Commissioners appointed by the Legislature advising them of the necessity that one of them should give his personal attendance on the work to ensure an early navigation.

Ordered, That the Report for 1832, be signed with our names after the approval of the Vice President, Messrs. Keefer, Creighton, and Butler.

Resolved. That the first toll collected on the Canal shall be placed in the Bank to redeem a note of hand given by Messrs. McDonell, Chishom, Elliott, Keefer, Creighton, and Merritt, for the sum of £500 payable in one year.

The Board then adjourned.

May 1st, 1833.

At a meeting of the Board of Directors, at the Canal Office, St. Catharines,

PRESENT.

Alexander McDonell, Esq., Vice President, George Keefer, Thomas Butler, and

Ogden Creighton, Esquires.

Ordered, That the general statement of the Company's affairs now submitted and the list of debts due by and to the Company be approved of, and that the same be entered on the minutes.

Resolved, That an alphabetical list be made out of the names of those persons to whom the Company are indebted, with the respective amounts opposite thereto, which is to include the balance due on every transaction with the Company, and that notes be made out for the respective amounts payable on demand, for £2 10s., and under-In six months over £2 10s., and under £10-In one year for sums over £10-signed by the Vice President and countersigned by the Secretary.

Resolved, That the several amounts due the Company be put in course of collection forthwith and brought to a close. The Secretary to select such as are uncertain of being collected and settle them himself, and if not able to do so, to place them to ac-

count of profit and loss.

WHEREAS, it appears by the minutes of the 12th of June, that the sum of £2,300 was adv. ccd to Contractors, at the discretion of the Agent and Engineer, which sums were then entered by the Secretary, to the debit of said Contractors-and whereas, it appears the money was paid out on the work to other Contractors and in different sums.

Ordered, That the appropriation which was apportioned and paid be approved of and confirmed.

Whereas it appears by the minutes of the Board, of the 19th November last, that the Mortgage and Bond from the Hydraulic Company to the Welland Canal Company was ordered to be assigned over to the Hon. J. H. Dunn for the sum of £3000, and as the order for the appropriation of this sum does not appear, although the intention of the Board was made known at the time by reference to the following letter from the Agent to Mr. George Keefer, the Engineer, viz.-

"You will receive the discount of £2,500 which is intended for the special purpose of paying off our laborers who are going away, and advancing a part to those who remain,—then to pay Donaldson a sufficient sum to discharge his laborers, say from 2 to \$3,000. Thos. Merritt enough to pay his, say \$1000. Thompson, 1 to \$2,000. Old line Vanderburgh and others, a portion daily-a portion to Camp, and a portion to those at the Dam, but on no account to pay a single order to any Merchant or other person who may hold due bills until you inform me how the money holds out.

The amount received from the Hon.

John H. Dunn was paid to Alexr.

McDonell, Esq. Vice President....£ 250 0 0 Received from the Bank of U. C. 1st ....£2,500 0 0

Which was expended.......£2,750 0 0

Resolved, That the same be approved of. It appears by the Act of 1833 that the Commissioners appointed by the House of Assembly are to decide on all claims that may remain unsettled by

the Welland Canal Company.

Resolved, That the Secretary write to the Commissioners to name a day when and where they will attend for the above purpose, that the applicants may be notified accordingly.

In case any difficulty or disagreement should arise in making a final settlement of the Company's accounts by the Agent and Committee,

Resolved, That when the day is named by the Commissioners the Secretary do notify Messrs. Thompson and all those having claims that the same - accordwill be settled by the Arbitrators on ing to law, and request their attendance accordingly.

Various suits having been instituted by Contractors, in consequence of their not having received the money due them from the Company-and a number of widows and indigent persons being detained for payment of their wages,

Resolved, That an application be made to the Commissioners for a Loan of £1000 to pay those demands and that the same be retained out of the tolls collected this year at Port Dalhousie and Grand River, which are to be appropriated to this purpose-and the Secretary is directed to pay the amounts collected monthly at said Ports to the Commissioners, and that the tolls collected at Gravelly Bay be appropriated in payment of Harbour until it is sufficiently secured.

Ordered, That all demands due by the Company, or Notes, be taken in payment of tolls, or for any debts due to the Company.

Shews a list of the Accounts due to the Company on their Books, and as it is more than likely that a small part of the same will be collected, ...

Ordered, That those Accounts be closed and an Account opened to be entitled "Bad Debts," and that the balances be transerred to the debit of the same, crediting said Account with any amounts which may hereafter be received, and also with whatever old balances appear in the Company's Book's to the credit of any individual.

Resolved, That Mr. Smith be notified by the Secretary that he will be suspended from his situation on the 6th May next, unless he makes good the sum due by him on or before that date.

Experience has already shewn that it is expedient and necessary, that every officer in the employment of the Company, who has charge of money, should give security.

Resolved, Therefore, that the Collectors of Tolls at Port Colborne and Port Dalhouse be required to give two responsible sureties in the sum of £250 each, besides their own Bond for £500—and the Collector at Dunnville £250 and two sureties of £125,-conditioned for the punctual payment of all moneys which may come into their hands, according to the discretion or requisition of the Canal Company.

Whereas applications are made to the Company from time to time, to make repairs on the Canal, in situations on which Mills are erected or water taken out of the main Canal, for Hydraulic purposes, it is nuccessary the same should be defined for the guidance of the Superintendent.

Resolved, That in all situations the main body of the Canal is to be kept in repair at the expense of the Welland Canal Company, all locks and waste weirs are included in the above.—But in all situations when water is taken out of the Canal for Hydraulic purposes the repairs are to be at the expense of the owners or proprietors of the same—and that all persons in possession of machinery on the line be duly notified of this resolution.

Applications having been made for tending bridges on various parts of the line-Ordered, that the same be let out by Mr. Merritt and Mr. Robinson on the best terms for the interest of the Company.

Resolved, That Mr. Merritt be authorised to negotiate for the loan of money to pay the demands on the Company, and that he proceed to York next week with a statement of the Company's accounts to lay before His Excellency the Lieutenant Governor, and make any application there or elsewhere he may deem necessary.

Resolved, That J. B. Yates be allowed one per cent for negotiating the sum of £50,000, amounting to £500.

Resolved,, That the account submitted by the Agent of the Hydraulic Company be approved of, and that the same be deducted from the interest due on the 1st of January last.

Contract majorarily sugar was more provided an alternative

1st June, 1833.

At a meeting of the Board of Directors, held at tire Canal Office, St. Catharines,

PRESENT:

Alex. Y. McDonell, Esq., Vice President,

George Keefer, and Thomas Butler, Esquires.

The Minutes of the former Board were read and confirmed.

The first and only subject taken into consideration was to indemnify and scoure John B. Yates, Esq., for advancing the interest due on the last loan of £50,000 and thereby securing the Canal, as will be more fully explained by reference to the letters of the Honorable the Receiver General of 18th and 19th April last, and by the following resolution.

WHEREAS in consequence of the unexpected embarrassments of the Company the interest due the Bank of the United States for the 6 months ending the 16th March last remained unpaid, and whereas the same was advanced and paid by John B. Yates, Esq., of New York, one of the principal Stock-holders:

Resolved, That the amount so advanced by him being \$50075 with the interest thereon after the 16th instant, together with the rate of exchange on New York 14 per cent be repaid to the said John B. Yates, out of the first monies which shall be received by the Company, and it is further Resolved, That immediate provision be made for the more punctual payment of the interest hereafter, and that the President and Secretary adopt such measures as may be required fer that purpose, and if payment of the loan of £50,-000 shall be exacted pursuant to the notice received from the Branch Bank at Buffalo that the said offi-cers of this Company be required to make some other negotiation for said loan, and that the President or Vice-President and Secretary execute such instrument as may be necessary for that purpose.

Adjourned until one o'clock on Wonday) next

3rd June, 1833.

Pursuant to adjournment the Board met in the Canal Office, St. Catharines,

#### PRESENT:

Alexander McDonell, Esq., Vice President.

George Keefer, and Thomas Butler, Esquires.

In pursuance of the resolution of the meeting of the 1st May last, Mr. Merritt proceeded to York, with the necessary documents and made application for the relinquishment of the security by Government on the Hydraulic situation as by reference to the correspondence on that subject from 8th to 10th May, will more fully appear the result of which was the receipt of a letter from His Excellency the Lieutenant Governor, dated 9th May last, addressed to the Agent, which letter contains an assurance that a release shall be granted to the Welland Canal Company ceding the right which Government may have on those privileges as soon as a sufficient sum of money can be raised to pay off the debts contracted for work performed on the Canal, the document proving satisfactory.

Resolved, That John B. Yates, Esq., be authorised to adopt such measures as he may deem expedient. to borrow a sufficient sum for that purpose.

Resolved, That the arrangement made respecting lock tending by Mr. Merritt, (see his letter) they be approved of, and that Mr. Vanderburgh be paid 7s. 6d. per day, or \$30 per month.

Resolved, That J. B. Yates, Esq., be authorised to borrow a sufficient sum for completing the harbor at Port Colborne, on security of the hydraulic property, with the responsibility of the Company.

The Board adjourned.

5th June, 1833.

Pursuant to adjournment a general meeting of the Board was held at St. Catharines—

50. June, 1833. At a Meeting of the Stockholders; held so St. Catharines, pursuant to Act of Parliament-

#### PRESENT :

J. B. Yates, Esquire, A. M'Donell, Esquire, W. H. Merritt, Esquire, Ogden Creighton, George Keefer, Esquire, and Thomas Butler, Esquire,

The ballot being regularly taken and closed, the under-mentioned gentlemen were declared duly elected Directors for the ensuing year, viz :-

> Wm. Hamilton Merritt, Esquire, Alexander Yates McDonell, Esquire, George Keefer, Esquire, Thomas Butler, Esquire, Ogden Creighton, Esquire.

The Directors then present proceeded to the choice of President and Vice-President, when the following gentlemen were unanimously named:-

> William H. Merritt, Esq., President. Alexander M'Donell, Esq., Vice-President.

> > 6th June, 1833.

The Board met at the Canal Office-

#### PRESENT :

William H. Merritt, Esq., President, Alexander McDonell, Esq. Vice President.

> George Keefer, Thomas Butler, and Ogden Creighton, Esquires.

Ordered, That Ogden Creighton, Esq., be appointed Treasurer for the Company without a salary for the present year, on furnishing securities in the sum of £2,500.

Rescinded and April, 1859. Ordered, That the Collectors of Tolls are not to make any deductions from the amount of their returns for wages or other contingent expenses till first submitted for the approval of the Board.

The toll having been appropriated by an order of - instant, for the the Board of Directors, dated purpose of paying the interest on the loan of £50,-000 due the Bank of the United States, excepting the monthly payments of lock-tenders—sinking a pier and crecting a light house at Gravelly Bay, Port Colborne, and £50 for sinking a pier—on west side of entrance.-The contingencies for this office for lights at Harbor, &c., it appears has been omit-

Resolved, That the same be paid by order of the Board at the close of each month.

Ordered, That the President be authorised to prepare a memorial, transmit it to the Stockholders and forward it to the Home Government through His Excellency the Lieutenant Governor.

In no case is the Secretary to allow any paper to be taken out of the Canal Office unless for the purpose of registering or by a particular order of the Board any Director may take copies of any documents he pleases, but the originals must remain in the Office, and the Secretary be responsible for the 25th July, 1833.

At a meeting of the Board of Directors, held at St. Catharines.

PRESENT:
Wm. Hamilton Merritt, Esq. President.
Alexander McDonell, Esq. Vice President. Thomas Butler, and George Keefer, Esquires.

The minutes of the last meeting were read, and confirmed.

Resolved, That Mr. Robinson be immediately applied to for the payment of the £375, and that a vigorous prosecution of the work be recommended.

The Board adjourned.

27th July, 1833.

The Board met pursuant to adjournment.

#### PRESENT.

Wm. Hamilton Merritt, Esq. President. George Keefer, and Thomas Butler, Esquires.

The minutes of the last meeting were approved of.

Upon the representation of Mr. Farnsworth, the Commissioner's Superintendent, it was Ordered.

That the Secretary do immediately write to the proprietors of the Marshville Mills notifying them that at no time their Mills must be put in operation unless the water runs over the aqueduct from end to end, and the Superintendent is requested to report any breach of this order, when the regulations will be immediately enforced.

Ordered, That the Secretary write to Mr. Robinson, requesting him to furnish the amount expended by the Commissioners on the Canal, up to this date.

Ordered, That the resolution passed the 5th June relating to Notes not to be given for claims for damages or awards, be rescinded, and that Notes be given for claims on account of awards admitted by the Board.

It is Ordered, that no Collector of Tolls is to receive more than 25 per cent on the amount collected by him during any one month.

7th August, 1833.

At a meeting of the Board of Directors, held at the Canal Office, St. Catharines,

### PRESENT:

Wm. Hamilton Merritt, Esq President. Ogden Creighton, Thomas Builer, and that delice to the second of

Ordered, That the Board are not satisfied with the account presented by Mr. L. Clarke, as the dates do not correspond with the dates of the original account presented. The Secretary will procure a copy of the notices and Mr. Merrit's letter authorising payment of sundry persons on account of the Welland Canal Company

Ordered. That the Secretary write them immediatoly on that subject and for them to explain the overcharge for their wages for May.

The Collector for Dunnville not having yet furnished his return for July to this Office, the Secretary is directed to write Mr. Phelps on the subject, as also to notify him that if he thinks the situation of Collector at Dunnville not worth his attention, on communicating the same to the Board another person will be immediately appointed in his stead.

Amended and Ordered, That the Secretary make out september, 1833 and shew a statement of the tolls collected for each month, and to shew in detail the expenditure of the same, and in no instance are the tolls to merge in with the old accounts.

Mr. Clark's letter requesting to be allowed an advance out of tolls on account of his salary, was

Ordered, That Mr. Clark be paid out of Tolls £25, the same to be charged against his salary.

Adjourned.

21st. October, 1833.

At a meeting of the Board held at the Canal Office—

PRESENT:

Wm. Hamilton Merritt Esq., President.

George Keefer, and Ogden Creighton, Esquires.

The minutes of the preceding Boards were read and confirmed.

A letter from Mr. Randal, Collector, was read explaining why he charged his wages previous to the opening of the Canal at Port Colborne.

Resolved, That there being an order of the Board that no Collector shall receive more than 10s. per day from the commencement of the navigation till its close, Mr. Randal must be charged with the amount paid him for services previous to the commencement of the navigation for the month of May last, propiniting grape of the with region and a rest

It being made appear from Mr. Randal's letter submitted that Alonzo Sprague, Master of the schooner Hiram, was, in the canal at the time of detention in July 1832, and have not received a certificate to that effect, it is therefore-

Resolved, "That the owners of the schooner Hiram receive credit on their future Tolls to the amount of £11 4 02, being the amount of Tolls on her cargo when detained in 1832.

With a view to close up all the Toll returns with the close of the navigation this year-

Ordered, That the several Collectors be advised to leave no balances unsettled by them up to the 31st. October inclusive, and that the Secretary will make out and shew a balance sheet of all old accounts to the 1st. November for the information of the Board.

Captain Creighton's report respecting his, mission to Montreal was read, the Board are satisfied every exertion has been made on his part to obtain the object of his mission, and have no doubt the Creditors

of the Company will feel satisfied every exertion has been resorted to by them to liquidate their just de-

It having been made appear to the Board that the owners of the schooner Erie and Ontario had not received any compensation for detention in the Canal in July 1832.

Ordered, That the owners of the Eric and Ontario receive credit on this Year's Tolls for the amount of £12 1 4, being amount of Tolls on her cargo in July 1832, and also that the owners receive credit for £1 4 0 for bags furnished to lighten schooners on the Canal.

Bradly Sherwood set forth a claim of £5 for lighting schooner Henry in 1832.

Ordered. That Mr. Randal must submit his opinion on this claim.

Robert Kirkpatrick Esq., claims by account 6s. 8d. for use of a Pickaxe.

Ordered, That this claim be deferred for further consideration.

Messrs, Bowery and Butler's claim by their account £2 12 21 for lumber &c.

The claimants are required to furnish vouchers for their charges.

The Secretary having paid Captain Baird £1 10 for detention at Messrs. Bowery and Butler's mills-

Ordered, That Messrs. Bowery and Butler be charged with the same.

The Board adjourned.

26th November, 1833.

At a meeting of the Board of Directors, held in the Committee Room of the House of Assembly, York,

#### PRESENT:

W. H. Merritt, Esq. President.

Wm. Elliott, and

Wm. Chisholm, Esquires.

The minutes of the last meeting were read and confirmed, and in compliance hereto the Secretary resented for the consideration of the Board the following documents, viz.:

1st. A general statement of the affairs of the Company to this date, from which it appears that the receipts and expenditure from the commencement of the undertaking, have been....£362,478 1 01

2nd. The Company's balance sheet for the current year, which shews an expenditure of £5018.8. 33, and which is embraced in No. 1.

3rd. List of Notes or Due Bills issued and due by the Company, 

List of debts due by the Com-pany, so far as the same have been 

Amount due to the Hon. John H. Dunn, for advance made by 2,750 0 0 him last winter..... Making the cost of the Canal ... \$383,322 11 All of which was approved of, and ordered to be engrossed. Ordered, That the Secretary be directed to close the several accounts in the Company's Books, according to the documents now presented. The Secretary also laid on the table a general statement of toll on vessels and property passed through the Canal, on the 31st of October, shewing the amount of toll received to that period to be £3335 4 94. Ordered, That the Secretary be requested to present to the Legislature the several documents above described, and name a Committee of the House of Assembly to examine and report on the same. There was likewise presented to the meeting by the Secretary, A list of debts due to the Company ... £ 627 13 5 A list of debts due for Toll and Forwarding, season of 1830 and '31... 473 14 83 84 14, 61 A list of debts due for Toll, 1832.... £1186 2 The meeting, however, upon a careful examination of those lists, think that no more than & can be recovered, and they direct the Secretary to use every exertion for the collection of such debts as are considered good. Ordered, That for the more secure keeping of the

Books, during the absence of the President and Secretary, attending their duties in Parliament, they be sent to the House of Wm. H. Merrit, Esqr. after the accounts are closed and balanced. The following sketch shews the ability of the Company to meet the payment of the debts due by them :-

Hydraulic Company's Bond.....£25,000 1,500 1 year's interest.....

£26,500

Amount of debts due by the Company, to the 1st November, (exclusive of claims not yet decided 20,844 10 72 by the Arbitrators.)....

£ 5,655 9 41

# IN THE YEAR 1834.

An Acr was passed on the sixth of March, this year (hereto appended, marked No. 1,) increasing the Capitali of the Company, and an aid of 250,000 was granted, by the Province, subscribing Stock to that amount. The Company were thus enabled to pay their debts and to continue to finish the Canal.

In the Session of Parliament of 1833, '34, the question whether the Canal should be made a Provincial work, was argued for several days-and great anxiety was expressed during the discussion that the Compuny should repossess the lands and hydraulic privileges formerly sold by them to Mr. Yates and was made a principal objection to the Province taking the Canal off the hands of the private Stockholders, [see Report of Committee of House of Assembly, and Letter of J. B. Yates, Esq. hereto appended, marked No. 2.] The Board of Directors tock the matter into consideration, and appointed a Committee of their number, consisting of Doctor Dun-combe, William Chisholm and Colonel Elhott, the three Directors appointed by the House of Assembly this year, to investigate the matter and report upon the propriety of making a re-purchase, [see the Report of those gentlemen, appended herete, marked No. 3,] [see also the agreement entered into, hereto appended, between the Welland Canal Company and Messrs. McDonell, Yates & Creighton, marked No. 4.]-The Annual Report of the Directors and the minutes of the Board this year, will furnish a detail of proceedings, [see Report of Directors for 1834, marked No. 5, and minutes of the Board for same year appended, marked No. 6.]—See also Report of Directors for the year 1835, marked No. 7.]

Documents referred to in the foregoing remarks.

ACT OF PARLIAMENT 4th Will: 4th, Chap. 39..... Marked No. 1. REPORT OF COMMITTEE of H. of A. with letter of J. B. Yates, Esq... REPORT OF GOVERNMENT DIRECTORS, on the Hydraplics, ..... AGREEMENT, between the Welland; Canal Company and A. McDonell, J. B. Yates, and Ogden Creighton, Esquires, ..... REPORT OF DIRECTORS for the year 5. MINUTES OF BOARD for the year 1834. REPORT OF DIRECTORS for the year 

This year the following Government Directors, were appointed, viz:-

> William Elliott, Charles, Duncombe, & Esquires.
> William Chisholm. William Chisholm.

The Stockholders appointed the following, viz:-

William Hamilton Merritt, Esquire, Ogden Creighton, Esquire, Alexander Y. McDonell, Esquire, &. Thomas Butler, Esquire, No. 1.

# ACT OF PARLIAMENT,

4ти Will. 4ти, Силр. 39.

AN ACT to alter and amend the Charter and increase the Stock of the Welland Canal Company, and to authorise His Majesty's Receiver General to subscribe Stock in the said Company or behalf of this Province.

[Passed 6th Murch, 1834.]

W HEREAS it is expedient to amend the Charter and increase the Capital Stock of the Welland Canal Company, and to authorise the taking additional Stock on behalf of this Province in the said Company, for the purpose of enabling the said Company to pay the debts now due on account of the said Welland Canal, and to carry into effect certain improvements recommended by the Commissions appointed during the last Session of the Legislature of this Province to inspect and report thereon, and to make further provision for the direction of the affairs of the said Company: Be it therefore enacted, Sc., That the first clause of an Act passed in the sixth year of His late Majesty's reign, entitled, "An Act to repeal part of and extend the provisions of an Act passed in the fourth year of His present Majesty's reign, entitled, 'An Act to incorporate certain persons therein mentioned under the style and title of the Welland Canal Company." be, and the same is hereby repealed.

all. And be it further enacted, &c., That from and after the passing of this Act, the number of Shares constituting the Capital Stock of the Welland Canal Company shall not exceed Twenty Thousand, at Twelve Pounds Ten Shillings each.

III. And be it further enacted, ye., That it shall and may be lawful for the Governor, Lieutenant Governor, or person administering the Government of this Province, to direct His Majesty's Receiver General to subscribe further Stock in the Welland Canal Company to the amount of Fifty Thousand Pounds, which Stock shall from thenceforth be held as and deemed to be public Stock, and to be in addition to and form part of the Capital Stock of said Company; and that the Government of this Province shall, as the holders of such Stock, be subject to the same conditions, and have powers, advantages and privileges as other Stockholders in the said Company.

IV. And be it further enacted, &c., That it shall and may be lawful for the Governor, Lieutenant Governor, or Person Administering the Government of this Province, to authorise and direct His Majesty's Receiver General of this Province to raise by loan, on Debenture, from any person or persons, bodies corporate or politic, who may be willing to advance the same upon the credit of the Government Bills or Debentures authorised to be issued under

this Act, a sum not exceeding Fifty Thousand Pounds Provincial Currency, in sums not less than One Hundred Pounds each, which Debentures shall be payable at the expiration of not less than twenty nor more than forty years from the date of such Debentures, bearing an interest not exceeding six per cent per annum, payable half yearly in this Province, or at an interest not exceeding five per cent, payable half yearly in London, on the transfer of the debt of this Province, by His Majesty's Receiver General.

V. And be it further enacted, &c., That it shall and may be lawful for the Governor, Lieutenant Governor, or Person Administering the Government of this Province for the time being, to issue his Warrant on the Receiver General of this Province for the time being, for the said sum of Fifty Thousand Pounds, so to be raised by Debenture as aforesaid, or such part thereof as may be from time to time required by the Directors of the said Company.

VI. And be it further enacted, &c., That all such Debentures as are hereby authorised to be issued, and the interest thereon, shall be and are hereby charged and chargeable upon, and shall be repaid and borne out of the monies that shall come into the hands of the Receiver General, to and for the public uses of this Province, and at the disposal of the Legislature thereof.

VII. And be it further enacted, &c., That all and every the provisions contained in a certain Act of the Parliament of this Province, passed in the seventh year of His late Majesty's reign, entitled "An Act to authorise the Government to borrow a certain sum of money upon Debenture, to be loaned to the Welland Canal Company," respecting the Debentures authorised by the said Act, passing current with certain public Accountants; the payment of interest upon the same by such Accountants, and the suspension of interest in certain cases; the submitainers the Legislature accounts of such Debentures. ting to the Legislature accounts of such Debentures, the interest paid thereon, and the expenses attending the same; the payment of interest to holders of such Debentures; the remuneration to the Receiver General for the services required by the said Act; paying off and cancelling the said Debentures; and also, the provisions made in the seventh section of the said Act, for punishing the forging of any-Debenture thereby authorised to be issued, or of any matter or thing relating thereto, or the knowingly uttering any such forged Debenture or other matter as aforesaid, shall apply and be in force in respect to the Debentures which shall be issued according to this Act, save and accept that the punishment upon conviction of forging or uttering any Debenture is swed under authority of this Act, shall be the same as in cases of Felony which are not punishable with death.

NHI. And be it further enacted, acor That the number of Directors to be appointed annually for the management of the affairs of the said Company, shall not exceed seven; three of whom shall be annually appointed by a resolution of the House of Assembly of Upper Canada.

No. 2.

# REPORT

of

COMMITTEE OF HOUSE OF ASSEMBLY,

AND

LETTER OF J. B. YATES, Esquire.

To the Honorable

The Commons House of Assembly.

The Committee to whom was referred the Petition of the Welland Canal Company, beg leave to

#### REPORT:

From the indefinite terms of the petition, the Committee called before them, among others, Mr. Yates, one of the principal Stockholders in the Canal, and requested he would give the Committee any information within his reach on the subject of the prayer of the petitioners, and on the present situation of the Company generally.

From the long acquaintance which Mr. Yates has had with the subject, it was supposed a clearer and more general view of the present state and wishes of the Company could be obtained from him in the form of a letter to the Chairman, then in any other way.

In compliance with this wish, Mr. Yates has addressed to the Committee a letter, which is appended to this Report.

Without entering fully into the opinions expressed in Mr. Yates' letter, the Committee are bound to call the attention of the House to the propositions suggested towards the close of it. The first question is, shall the Government advance a sum sufficient, not only to place the Canal in such a state of repair as may insure its success during the ensuing season, but also to restore the credit of the Company, by enabling them to discharge the debts due to different individuals.

To the Province, in a commercial and general view, the value of the Canal is denied by nece. And it is admitted that the means of the Stockholders are insufficient to place the Canal in a state of repair for the ensuing season.

We are then required to consider whether the Province by withholding support, shall allow the Welland Canal to go into comparative disuse, even for one year, and thereby possibly turn from Upper Canada the principal advantages to be ultimately derived from this communication between Lakes Erie and Ontario.

The amount of debts outstanding against the Company is nearly £25,000, and the sum estimated to be expended during the ensuing season, according to the estimate of Mr. Wright, is £8500.

The Committee would call the attention of the House to the suggestions contained in the Report of Commissioners appointed by an Act of the Legislature, during its last session, as to any future provision for the Canal. Upon this part of their Report, Mr. Yates has entered very fully, and his views

seem in many respects, to correspond with the views of the Commissioners.

The means of the Company are exhausted—they are in debt—the Canal requires repair—without repair it must be at least for one season comparatively useless. Our enterprising neighbors are upon the alert to sieze any opportunity which may divert the trade and transport of the west from the waters of Canada.

Should any hesitation on our part to complete the Welland Canal, induce them to establish a route, affording even minor advantages, Upper Canada must for a length of time, perhaps forever, be deprived of the great benefits offered by the St. Lawrence, one of the great, if not the principal outlet of North America.

The Legislature have heretofore offered assistance to the Canal, but generally in such sums, and on such conditions as not to enable the Company to proceed with so much energy and certainty as to insure the completion and success of the work. The resources of the Company have been in many instances expended, and their energies almost paralysed in consequence of a series of accidents which none of those most interested in the prosperity of the work could foresee or prevent. And yet Mr. Wright gives it as his opinion that the expenditure on the Canal must, under all circumstances, have been conducted with great economy. This opinion of Mr. Wright's is entitled to much consideration, and ought to remove all doubts, if still entertained, that the funds of the Company, and loans given by this Province, at various times, have been improvidently expended.

The Committee deem it unnecessary for them to recommend to your Honorable House, either of the propositions submitted by Mr. Yates, and can only hope that something may be done, during the present Session, to place the Welland Canal in such a situation as may be most beneficial to the public interest.

J. H. SAMSON,

Chairman.

Committee Room, 9th January, 1834.

## LETTER

or

### J. B. YATES, ESQUIRE,

To James H. Samson, Esquire, Chairman of the Committee of the House of Assembly on the Welland Canal Petition.

York, 21st Dec. 1833.

Unapprised as I have been until this day, of what the wish of the Committee would be, I had not prepared any written statement for submission to them, but on the suggestion of others had supposed a different course would have been preferred.

I will however in compliance with your request in as condensed a form as I can, present a history of

the Canal, in a few particulars a little variant from that given by the Directors in their report of last year, after which I propose making some suggestions relative to the present state of the work and what is required to be done.

My health is not good, and the time now left in which I must do this is short.

In 1824 the first act of incorporation was passed Tyra small Canal, part of the stock was subscribed, a call made, and the work commenced on the 30th of November in that year.

The subscribers to the stock were however desirous that permission should be obtained to enlarge the Canal, and increase the Capital.

The routes and points of termination were then open for investigation, and decision, and as the stock holders supposed under their control. In 1825 the law was passed increasing the dimensions of the Canal, and the extent of capital, but fixing the point of termination on Lake Ontario and altering the ratio of voting on shares, so that a thousand shares gave no more votes to a stockholder, than one hundred.

These were very exceptionable alterations, but assurances were given that the work would with these alterations, receive a decided and efficient Legislative patronage. Although permission was granted to those who had paid any money under the first Act to withdraw and rectain their money already paid, yet as no fund for such repayment was provided if the project was abandoned; and a resolution for the appropriation of £25,000 in aid of the work having been passed at the same session as an earnest of the intention of Government to sustain it, those who had subscribed determined that they would not abandon the work for this cause but continue their support.

It appeared also from the very enactment itself, by fixing the point of termination imperatively that Parliament had been governed by considerations with which Stockholders have nothing to do, and the choice was confined to submission to the mandate or abandonment.

The books for subscription to the stock were opened in several places. The Receiver General of the Province who was President of the Company appeared in New-York and offered £75,000 for New York subscription, esserving the remainder except a small sum subscribed in Canada, for the English market.

In the intermediate time, before the stock was ever offered in London, the Directors determined on the strength of the New York and Canada subscription only, to proceed with the work.

The attempt to procure subscriptions to the Stock in England was procrastinated until the memorable year of bubble projects, which it is well known, was followed by a general prostration of credit, and an undistinguishing suspicion of all undertakings of this sort, destroyed every hope that the remainder of the Stock would be taken by individuals any where.

In this state of things, the attacks on the Canal, in consequence of its point of termination on Lake Ontario, were renewed. The whole commercial interest of the country was arrayed against it as a hopeless and profitless project, both for public and private

uses, the New York Stockholders were assailed by every argument that could be addressed to their interests or their fears, and the pecuniary safety of some of them was threatened for a time. Yet the Directors persisted in their calls on the Stock thus partially subscribed with a full knowledge that there was not enough to finish any part of the work for use.

Many of the Canadian Stockholders forfeited their Shares, some offered theirs for sale, thus increasing the load upon those who fulfilled their engagements, while the Shareholders in New York, with a confdence that the work would be supported by the Government, paid up.

In the year 1826, pursuant to the resolution of the preceding year, \$\cap{C25,000}\$ was appropriated by way of Loan.

The depression of the Stock and its low estimation among monied men, still continued, and in the winter of 1827, when the £25,000 from Government and about 70 per cent of the subscribed Stock had also been called in and expended, the Directors made application for Government assistance, but to so limited an extent that one of the Stockholders made a personal representation and exhibited the inefficiency of so small an aid.

In consequence of this by a very small majority after much opposition, the Province subscribed £50,00 of Stock and made a further Loan of £25,000, and also provided for a participation in the government of the Company by the appointment of two Directors.

The same session the Province of Lower Canada also subscribed £25,000 of stock. During the winter a Dispatch was received from Lord Bathurst, Colonial Secretary, promising on the part of the Imperial Government a grant of money equal to one uinth of the estimated cost of the Canal, on certain conditions, which were complied with.

Fresh confidence was thus infused, and the Stockholders became more fully assured that the work would not be abandoned by Government. Yet in all this the commercial interest of the country was not conciliated to its termination on Lake Ontario, and it was generally believed that so placed it could not be profitable. The stock therefore continued unsaleable in the market. The Company of course had no credit on its own strength, while the means and credit of some of its most prominent private supporters had been exhausted, by continued and heavy payments to a work so generally disparaged.

The funds thus appropriated were again exhausted and the actual cost of the Canal exceeded the estimate so fur that it was thought expedient to send Mr. Merritt to England. He succeeded in procuring a loan of £50,000 from the Imperial Government on condition of surrendering the claim to the performance of the former promise of one ninth of the cost.

A private subscription to the stock was also obtained by Mr. Morritt from some persons high in office and a few others of such standing and wealth that the smallness of the sum rather impaired than aided to the estimation of the stock; although it exhibited their good will to a work hopeless of most. but for the accomplishment of which they were willing to three away a certain sam.

Again, however, hope was revived—the progress of the work was pursued, but during the absence of Mr. Merritt, the contracts for some of the locks had been badly performed; and shortly after the sliding of earth at the deep cutting occurred when the whole excavation was nearly completed. The whole project was now confidently pronounced a failure by those opposed to it, and many of its friends were dispirited.

There was a determination however on the part of the large Stockholders to persist in the undertaking—relying on the deep interest Government had taken in it, and the evident advantage the Province must certainly derive from it.

The alternative was now presented, for the consideration of the Directors, either to persist in the precarious attempt to make a thorough cut to the Welland River, or take a feeder from the Grand River.

It is not within the limits of my present plan, to examine the merits of these projects; although I am prepared to shew that the one adopted by the Directors was the only one which afforded a hope of success.

Further excavation at the deep cutting was abandoned and a route for a feeder from the Grand River surveyed. The excavation was commenced and a contract for the construction of a dam across the Grand River entered into; after some preparation had been made and the site for the dam fixed under that contract, with a due regard to the safety of the linhabitants and economy, objections were unexpectedly made to the place, as too near the mouth of the River for naval purposes; and the Board was compelled to select a station five miles higher up the River, by which a great additional expense was incurred.

At this time, also, obstacles were thrown in the way of an attempt to facilitate the entrance of vessels into the mouth of the Welland River, which were however unfortunately for the Company, overcome.

To this difficulty, its removal and effect, I may again have occasion to refer; for instead of being beneficial to the Company, it gave prosperity to a place almost inaccessible before and afforded animation and vigor to the most heartless and unrelenting opposition, if not persecution, the Canal and its supporters have ever experienced from any quarter.

A considerable sum, was ultimately expended on the Welland River for a towing path and the cut across the point at Chippawa—after some further progress in the work in 1829, it was ascertained that the funds must again be exhausted, and the work stop or more money be procured.

The Company decided on sending again to England, and one of the stockholders in New-York consented to go. He was directed to procure if possible a remission of the debt to the Imperial Government to the extent of the sum originally promised by Government and to procure a loan or dispose of stock to the amount of 20 or £25,000, which it was supposed would make the Canal navigable by way of the Niagara and Welland Rivers into Lake Erie.

On the strength of this mission, in the hope of its success, the friends of the person sent, in New-

York, accepted to the amount of £10,000, to prevent the work from stopping altogether.

The application to Government for the remission of the debt did not at that time succeed, but a subscription for stock to some amount was obtained. With this sum it was he ed the navigation by the above circuitous route would be opened and the practicability of the work being thus proved, confidence would be restored and a sufficient degree of credit secured to complete the remainder. The Company was however again doomed to disappointment. The contract for the dam across the Grand River was not well performed; and the whole having settled more than two-feet the Canal was left dry, and instead of a good effect being produced by the use of the Cunal, during the summer and autumn of 1830, additional discouragement was experienced and the noise from the whole body of assailants so completely misled the community that explanation and justification could not be heard except by a few who had: independence of character and strength of judgment to look beyond this barrier of obstreperous censoriousness. Notwithstanding these efforts against them, fostered by a gratuitous malignity and successfully maintained by exaggerated statements of the casualties that had occurred, relying on the few who were willing to investigate for themselves; the Directors compelled by the necessities of the Company again in 1831, presented their memorial for further aid from the Province. This was however done with so hesitating a fearfulness, that they did not make a full representation of the actual wants of the Company, to obvinte the defect, one of the stockholders again, as in 1827, made a representation and freely exhibited what in his opinion must be the wants of the Company, and attempted to prove the good policy and beneficial effect of adequate and full, instead of partial relief. The Committee wher a thorough examination of the affairs of the Company approved of the more efficient course recommended and reported in favour of creating a Government stock to the amount of £200,000 taking the Canal and its works in pledge therefor, for the purpose of completing the Canal as it should be, paying off the former debts of the Company to the Covernment and consolidating the whole. The useful effect of this measure on the prospect of the Company, the funds of the Province, and indeed the whole character of the undertaking was so evident to every person who had bestowed any thought on financial operations, that its failure after being recommended by the Committee, confirmed by the Commons House of Assembly, and supported by a resolution of supply, was matter of astonishment and regret to many disinterested friends of the work both in and out of the House. It is not my design to examine the cause of the abandonment of so good a measure. It will be sufficient to say, that all the features of this promising measure were altered and a loan of the credit of the Government was voted for £50,000, a sum merely adequate to make the communication to Lake Erio direct, leaving the supply for repairs and the restoration of an impaired credit by payment of debts, and also the payment of the semi-annual interest on the £50,000, dependant on the contingent tolls to be derived from an imperfect, and, indeed, anunfinished work. Unequal as this sum was, to the full accomplishment of the object, the aid was necessary, and although accompanied with most singular and personally burthensome conditions, yet those conditions were complied with, and it was thankfully received. The work was again started with vigor, a temporary loan having been procured, on the hypothecation of these Government securities, for £50,000, and there was every reasonable prospect that the whole would be finished in a short time, when all labor was arrested by that desolating scourge with which, in Thus time 1832, the whole country was afflicted. after time, and year after year, have the prospects of this company been blasted by occurrences not within their control, and by a public calamity in which the whole Province was involved; yet in this last instance, if what I heard was a true representation of the language used, the Company has been charged with fault, for not having had power to contend with this afflictive dispensation of Providence.

At the end of the year 1832, the Directors again found their funds exhausted, the Company deeply in debt and without any means or credit to prepare the Canal for the business of the Spring. On this re-Canal for the business of the Spring. presentation, I am told, the most unbounded vituperation was used. Some of the oldest and warmest friends faltered, and nothing more was done than the purchase, on the part of the Government, of £7,500 of the remaining Capital Stock of the Company, on the express condition that this money should be expended under the direction of three Commissioners appointed by the Province; with such limitation and restrictions as to imply a Legislative censure on the Board of Directors, or agent for misapplication of money: And an Engineer was employed to examine report upon the work. In all this no provision was made for the payment of the Debts of the Company, and its Creditors were in some instances ruined by procrastination.

The use of the Canal, in this first year of its completion, to Lake Erie direct, did not commence until the best business of the season was past; and it is well known that, in the transportation of the produce of the country, mercantile engagements must be made during the winter. Notwithstanding this great disadvantage, the evidence of its prospective usefulness, afforded by the short time in which the Canal has been in operation this season, is conclusive.

The season of business was broken, commencing in June instead of the first of April. There were no funds to keep the Canal in order, in the hands of the Company; and no such assurance of safety could be given as to justify prudent men who had another channel to recommend its use. The transportation was, however, fifty per cent more than the preceding year in the three months of uninterrupted navigation, which is perhaps the full extent of time that it has been in use this season, free from casualties,—the bad effect of which would have been, in part at least, obviated, if there had been means to prepare for contingencies. There is good reason to believe, that, if the Canal could have been ready for use in April last, and full assurance given that it would be kept in common order, the income from it would have exceeded £12,000; and this sum will more than pay the interest on the whole debt of the Company.

The Canal was open, and in use, altogether unimpeded by ice in this month, even during the cold weather which we have had; while, on the Erie Canal they had been obliged to break and cut ice in

The Company now requires, in orseveral places. der to secure the earliest opening of the Canal promptly, to be sided to an extent that will enable the Directors to widen the feeder, so as to admit a greater flow of water; to dredge the Canal; to repair and secure their Locks; to complete their Harbours; and to pay their debts. The remaining £100,000, contemplated to be Loaned in 1831; would be sufficient for the purpose, and, with the income of the Canal, gradually renew the Locks, and make them of greater dimensions as they require renewal. I have thus given as succinct an account as possible of the progress and present state of this great work. In looking at and examining some of the most prominent circumstances, which is all that at the present time can be done by me in its progress, I cannot avoid a remark, founded on what has appeared to me one of the most singular circumstances ever known in such a work. An exhibition throughout of disinterested anxiety on the part of many with regard to the expenditure, and sometimes a gratuitous suspicion of misapplication of money, (evidently without much examination,) while the private Stockholders (a very few of whom hold an amount equal to the Stock interest of the whole Province therein,) have closely examined the accounts, and, although disappointed in the whole cost of the work, are satisfied with the expenditure, and retain their confidence in the prospect of the Canal, and in a full and certain return upon their entire outlay, if they shall be sus-

In complete confirmation that this confidence in the economy of expenditure has been well founded, ewery Committee for the purpose of investigating the accounts has reported the same thing; and now an Engineer, appointed by Commissioners selected by the Legislature to expend a sum on the Canal, for which an equivalent in Stock is held by Government, has candidly (although necessarily, in truth,) reiterated the fact—That much economy in expenditure must have been used to have produced such results as even the present state of the Canal exhibits.

I now propose drawing the attention of the Committee to some particulars in the Report of Mr. Wright-and first I notice the Locks on the Canal. These unfortunate Locks have been a fruitful source of declamation and misrepresentation. Some few of them were badly constructed in the first place, owing to fraud on the part of the Contractors. With the exception of these, all the Locks have answered the expectation of the Company; and it is demonstrable that, under the peculiar circumstances, any attempt to construct more expensive ones would have produced a failure in the work, and ruined some individuals who solely sustained it in its commencement. Other plans for Locks have been recommended. A short comparison of their promised durability may be useful. Mr. Wright estimates the cost of repairing the present Locks, without enlarging them, at £1700 each, which may be done gradually as they shall require repairing, stating a probable duration of four years, within which time it may become necessary to attend to all of them in this way; and then he supposes the repaired Lock will last 10 years. The present Locks have cost on an average not to exceed £750 each; and the first four of these Locks were completed in 1826, and have not required any repair. They are yet good after seven years' duration, and much greater exposure, than to have been in continual use. Where the Locks have been regularly supplied with water, the foundation will not sustain injury in fifty years, and the top or upper part of them can be renewed every ten years for less than two hundred and fifty pounds each.

These Locks, therefore, which have cost each £750 only, with every disadvantage of an empty Canal and the worst species of exposure both winter and summer, are yet in use. Their width is 10 feet more than the other Locks, being 32 by 125 feet chamber, the danger of sustaining injury was greater in proportion to the pressure of water and size of Lock Gates. The conclusive evidence from this part of the experiment is, that, when well made, this species of cheap Lock is as durable as any other Wood Lock. The cost, as suggested by Mr. Wright, for repairing is £1700. Deduct from this the actual cost, £750, of a new Lock on the present plan, the balance is £950. Put the duration of the present Lock at 10 years, seven of which have already expired, and the interest on the difference only, annually compounded at the rate of six per cent., amounts to near £746; so that, in the worst possible form, if the whole required to be taken up from top to foundation, the difference of interest alone on the relative cost would construct a new one every ten years, instead of repairing the old one.

No man a quainted with the duration of wood under water will hesitate to say, that wood immersed in water is probably imperishable by time only. All, then, below the water is as good as stone; and it is an abundant allowance to say one-third of the original cost will replace all above water, exclusive of the Gates, which are equally perishable in all Locks. £250, therefore, the sum above named, will repair them amply; and this may be done in the winter when the Canal is not in use. This calculation is on the supposition of repair only. The Engineer's next proposition is a Lock of £2416. The difference between this and the cost of the present Lock is £1,-666; the interest as above on this difference, for ten years, is £1,310, (I throw off fractions,) nearly double the cost of our present Locks; and yet this is still only a superior sort of Wood-lock, with rubble or dry stone wall, sheathed with wood, conveniently repaired, as it is said, but still requiring repair in the same time and manner with the other.

The unerring certainty of mathematical calculation settles this question, and the Company have adopted a course the most conducive to public and private interest in the prosecution of their work. The next species of Lock presented for consideration is that of Stone. Mr., Wright's estimated cost of a Stone Lock, is £4,812: the difference between our Locks and one of these is £4,060. Three years' interest thereon, compounded annually, is a fraction more than £775. Of course a New Lock, like ours, may be made for the interest on the difference in cost, every three years. But Good Locks on our plan have lasted seven years, and will last several years more, that is, the exposed part: the rest will, undeniably, last as long as we know any thing of time. Assuming, as we have done, Mr. Wright's limit of ten years, -at the end of this period the difference in the interest will be somewhat more than £3,196 each, and £250 will substantially repair any of our Wooden Locks: the difference, therefore, en the interest only, at the end of ten years, is £2,946;

—multiply this by 40, the number of Locks in the Canal, and the saving amounts to the enormous sum of £117,840, or 471,360 dollars.

When Mr. Wright made his Report, he presented his propositions to men competent to examine his statements, and they were submitted for consideration. It certainly never occurred to him that the information and the enlarged view on which his calculations were founded would be so perverted as to afford an argument against supporting the work. These Estimates were presented for consideration, and to be adopted when a conviction shall become prevalent that the business of the Canal will warrant it-of which he does not appear to entertain a doubt as an event that must soon occur; and, unless the ordinary laws which govern the commercial inter-course of society are different here from any other known region, in less than ten years the business on the Canal will support any expense that may not only be necessary, but, under any circumstances, desirable. Assured, as I feel, of the liberal feelings of the Members, and willingness as well as competency to examine this part of his Report, I beg leave to draw your attention particularly to it. Attempts have already been made to pervert its meaning; and impressions, evidently never designed, have been excited in relation to the requisite expenditure upon the Canal, to sustain it in useful operation. This can have been occasioned only by too superficial an examination of the Report and its Statements.

This feature in the Report of Mr. Wright, I shall again have occasion to notice, and will therefore leave it for the present.

The misrepresentations with regard to the Locks have been the most untrue of any that have been ut-tered in relation to the Canal. It is painful to be placed in a situation that requires the exposure ofdeliberate and premeditated fulschood; but, disagreeable as the task is when it becomes my duty, and is within the limit of my right, I shall not omit it. has become almost an axiom among a certain class of Engineers, that Locks for Canals, made of Wood, are useless; and so many of the merely imitative part of the community have blindly adopted it as such, that any attempt, reasonably to disprove it, is in danger of being laughed into silence. It is, therefore, with some gratification, that the testimony of of Mr. Wright, in his Report, may be referred to as not objecting to Wood Locks. He merely prefers varying plans of his own. I have endeavored to show, that, even there, we lose nothing, by comparison, in durability, and gain much in cost.

I owe an apology, perhaps, for the terms I have used with regard to those who, without any reason have condemned the use of Locks made of Wood.— I have so often been met by expressed incredulity, after positive and unimpeached evidence, that I cannot give credit to their sincerity except on the supposition of too easy an acquiescence in a received opinion, and culpable heedlessness of proof, while there is a pretention to full information.

When no injury can result from submission to, and retirement from, such a course, it is well. But, when the protection of an important work, and the prosperity of the whole community, are dependant upon our firmness, we must not permit ourselves to remain silent for the sake of quiet. There are many who are called to act on this subject, and have hade

no opportunity for investigation. It is injustice to them to permit bold assertions, if untrue, to remain disproved.

I have asserted that the Locks were such as, in our situation, were most conducive to public good and private interest. To prove this, I have shown that the very interest on the difference in the cost of the cheapest Lock suggested, is more than double the sum requicite to keep the Locks, on their present construction, in repair for ever; and in a Stone Lock the interest of one year on the difference in the cost is more than double the amount necessary for the same purpose. I now assert, that, in no one instance, has the delay in navigation on the Welland Canal been owing to the Locks having been made of Wood; but the same causes would have produced the same accidents with Locks of any other construction. It will be recollected, that, in the various attacks on this work, the form and mode have also varied to so great a degree, that what was, at one time, considered an argument in favor of the Canal, has, to suit the convenience of the assailants, been perverted into a charge against it.

Thus, its friends have asserted, that, when finished, its advantage would be greater and its income increased, because it would be used by the Americans in approach to their own sea-ports; and, in this way, even those who had a distinct commercial interest, would aid in support of a work by which the facility for conducting your commerce has been promoted. This anticipation was considered improbable, when first named, as a foundation for hope of income; but no sooner does experience prove it true, than this very use of the Canal becomes an evil. Thus has it been with the Locks. The first flood would sweep off the rubbish. The floods came again and again—the Locks remained uninjured. Years passed—accident prevented their use, and left them exposed, without water inthem, to the heat of Summer and the from of Winter; yet two or three only have required attention : but that was enough to renew the charge; and I must confess I have been much surprised to hear assertions made by men whose opportunity for information has been better than mine, which, with even the personal attention I have been able to give the work, I know to be unfounded.

Of the assertions I have made with regard to this part of the work, those which relate to relative expense rest on calculation; and, if this be correct, must be undeniable. Such as are founded on duration and safety, are proved by experience and observation. We have nothing to ask but an examination of proof.

Thave said, if Stone Locks had been attempted, the ruinous result must have been inevitable. £4, \$12, the cost of one of the Stone Locks of Mr. Wright, multiplied by 40—the number of Locks on the Canal—would be £192,480.

In what state should we have been placed if an attempt like this had been made?

The sum required for this object only, would, after the expenditure of our money and the first £25,000 of the Province have prevented any further advances.

If, with a Canal almost completed, sufficiently prepared to give conclusive evidence of its immediate and immensely prospective advantages, there is still strength of opposition sufficient to render it

doubtful whether this important commercial channel will continue to receive public support;—how evident must it appear, that any attempt to make the Louks of more durable materials would have caused an entire and disastrous failure!

Much has been said of the large amount yet required by the examination and estimate of Mr. Wright to complete the Canal. I have before alluded to his view of the subject, and his object in thus presenting it. I will now examine other parts of his Report, and show that a greater part of those expenditures are to be incurred on the Canal, in the event only of certain contingent extension and improvements, not necessary for its immediate and beneficial use.

In the Supplement to the Report a more detailed estimate is given, in which we find what is more suited to our situation.

The entire amount absolutely necessary is about £10,000 for the ensuing year; of which sum three-fourths are required for the Harbour and permanent Work. In another year, if thought expedient, he has pointed out some further useful permanent improvements; and the entire sum of £7,550 is named for repairing Locks, and building four new ones at his own estimation. It will readily be seen, with all the professional and proper anxiety of Mr. Wright that this Canal should ultimately become such, in its construction, as its situation and great prospects demand—he cannot for a moment entertain the thought that any suggestion of future expenditure, upon expediency only; would occasion hesitation in its support. He, therefore, in all his statements, includes the necessary expenditure for enlargement, if increased business shall require it.

No part of this should be taken into the account when the propriety of present aid is alone considered: When the Canal shall require such outlay, there will be no difficulty in supplying it. In connexion with this part of the subject, I would refer to the Report of the Commissioners: They say, that "the greater part of the sum expended by them has been applied in finishing the Canal rather than repairing it."

In conversation I have heard it urged, by way of argument against hope for future aid, that the expenditure of £7,500, last season, is a criterion by which the annual outlay for repairs may be estimated.-How does this agree with the declaration of the Commissioners "that the greater part of this money was expended in finishing, rather than repairing, the Canal?" It was also then said, that the income of the Canal received during the season should be compared with such annual outlay, to test its usefulness. It requires a mere exhibition of such declarations, where they can be seen in connexion with the statement of facts as they are, to shew their fallacy. beg leave to refer to the account of Tolls, and the manner and time of their receipt, to shew that the husiness of the season was broken; and they were hut a fraction of what would have been received if the navigation had commenced early and could have continued uninterrupted. From this it will be seen, that, in the month of July, more than £1000 was received in Tolls. This is always a month in which there is the least transportation; yet, even this year, in which no expectation could be entertained that much would be done, with every engagement for the year against the Canal—if each month had been

equal to the one that is commonly of the least consequence, the income would have exceeded £8000; but, if the full season had been enjoyed, more than £12,000 would have been received, even at the present low rates of toll,—which are, for the whole of this large Canal, as low as those on the Burlington Bay Canal. It was thought advisable to put down the Tolls, for the purpose of inviting transportation, as low as possible. In some instances they have been placed unnecessarily low. This is not unfavorable to the ultimate hopes of the proprietors, but, in the present state of things, gives some plausibility to the statement of our opponents.

While we are thus struggling with difficultieswhen even the smallest circumstances are seized with avidity to embarrass our operation,-the Legislature is called on to encourage and give additional strength to opposition by the incorporation of a monopolising Joint Stock Land Transportation Company, without affording equal facilities to the Canal Company or its friends. From such competition there cannot ultimately be anything to fear if the Canal should be supported so far that the assurance of one year's business may be given. The effect, however, will be injurious to the estimation of the value of the property until time shall prove that such competition against the Canal cannot be sustained. There is also another view in which it may prove prejudicial to the interest of the Canal Company, and one which I fear more than any There are some who are willing to support the Canal with any required aid if they can be assured of a direct return from Tolls; and are too timid to rely on the other advantages arising from Commerce, Population, &c .- which are, however, equally certain, and evident to those who reflect on them. But, without such reflection, or examination of the capabilities of the country to be improved, and an independent exercise of the understanding, such friends are often driven, by their fears, from sustaining the best measures, although they may pass to the ranks of opposition with great reluctance. All this support is lost through apprehension—when a confident declaration is made that another channel may be used to equal or better advantage. I have said before, and I repeat, I fear no rail nor any other road. I am not opposed to them; but, when used to our disadvantage, in estranging our friends, I cannot avoid feeling the injury. I do not recollect what amount has been expended in improving the Chippawa, and the cut across the Point, by which the place has been literally renewed. From this place, so renewed, most of the opposition and misrepresentations in relation to the Canal have emanated: The modicum of Tollcharged for the use of our work has been resisted; and, for the whole of this portion of our expenditure, we have received nothing but injury from those benefited by it. But I will say no more on this subject, and proceed to the examination of other Questions connected with the Petition of the

Mr. Wright has said—"The money has been economically expended." We who are deeply interested are fully satisfied. It is true that there is no other work, proportioned to this in magnitude which has not cost more money.

Under unexpected difficulties, and the necessity for expenditure beyond original estimates and anticipated costs, (and even without such embarrassments,)

the instances in which Government aid has been liberally given to works of this sort are frequent.

On the Continent of Europe they have been principally Government Works,—while, in England, they have been made by Joint Stock Companies, sometimes aided by the Government. In America they have been made by both the State Government and Joint Stock Companies;-the latter, in large projects when necessary, aided by the Local or State Government. The Union Canal in Pennsylvania, the earliest attempt in the State, was very liberally supported by public munificence; a guarantee of five per cent. dividend was made by the State to the Stockholders; and State Grants were made, by which the Company have realized more than 500,000 dollars. That State has, within 14 or 16 years, expend ed about 20 millions of dollars on works of this description. The Chesapeake and Ohio Canal Company has had a large Subscription from Washington City; and Capitalists in Holland have loaned to that City one million of dollars. The Chesapeake and Delaware Canal, with four Locks only, of the same size of those on the Welland Canal, has cost about £700,000: the distance is 16 miles. The estimates £700,000: the distance is 16 miles. for this Work were as much below the actual costs as ours. The public aided in its completion; and, when unexpected difficulties were encountered, this assurance of ultimate safety enabled the Company to procure, on loan, what was necessary.

The Hudson and Delaware Canal was also the work of a private company—a boat Canal of small dimensions, depending for its support upon a mineral region only. In constructing that Canal, the cost also far exceeded the estimates; and the value of the Stock had become very much depreciated in market, when, on application to the Legislature of the State of New York, a loan of the credit of the State to the amount of 500,000 or 800,000 dollars was given to the Company in 1827:—and, this first loan being found insufficient, on a second application, in 1829, another loan of the same description, for 300,000 dollars more, was made to them. By this judicious and timely aid, the Canal was completed, and the price of the Stock increased to a premium above the par value, instead of being, as it was before, at a great discount.

In Great Britain also, the Forth and Clyde Canal was undertaken by a private Company; the work was abandoned for a time for want of funds; but the Government revived it, and aided in its completion by a grant, sufficient for that purpose, of £50,000.

We have indeed been aided by the Province in our undertaking; but I would, with the utmost deference, ask,—has the work been fostered in a way in which it could be sustained to the best advantage? Look at the manner in which its supporters have been assailed here. It has often been said, that Government has been deceived in the amount required to complete it. This is true; and so have the private Shareholders.

In the last representation in 1831, there was no such error. The wants of the Company were then freely exhibited; and, even with the disadvantage of the loss of an entire year in the use of the Canal by a public calamity, that exhibition embraced all that was quired. We have spoken of the immense resources of the country, and the great importance of this con-

necting link of communication, until it is heard like the repetition of an old tale. Mr. Wright & the Commissioners have again drawn your attention to it. I shall not trouble you with my observations on this branch. I will now take the liberty, with your permission, to examine an objection I have often heard made—that these loans are a load on the province, and impair the power of making other important improvements. This is one of those financial objections which may be easily refuted: but even plain demonstration is often insufficient to convince of error. Unpromising, however, as this task is, the resources are so certain that I must not pass it without some examination. There is an evident distinction between debts incurred by the 'Government for improvements in the country, and such as are lost in the ordinary and extraordinary expenses thereof, where no such objection has been obtained. This traism has been thus named, because, in the reasons I have heard opposed to incurring a provincial debt for objects of improvement, the two have not been properly distinguished. They may both be equally important to the country; but one is a load upon its resources, and the other increases them. Objects of improvement, for which public expenditure is required, are

also of many different kinds. Those from which immediate income is derived, and which at the same time promote the general prosperity, are most desirable, and bear their own recommendation by every consideration of duty and sound policy. Yet local interests and preferences, personal animosities and attachments, combined with many others of the great variety of human motives, more frequently interfere with and embarrass such measures, than any other. Their very prospects, and certain beneficial effect, if completed, insure stronger combinations and more unremitted efforts to defeat them. One of the most diabolical and insidious passions by which our erring nature is cursed, (envy,) is not unfrequently the foundation and mainspring of the most violent and persevering efforts, thus made for destruction merely. Those who are sincerely desirous to promote useful public objects, without regard to their origin or supporters, must be closely watchful lest species sophistry, professed honesty, and affected fearfulness of public injury, so far mislead as to induce them innocently to do or permit an irreparable injury. These are the weapons by which men of strict integrity, unsuspicious of the motives of others, are too often successfully assailed. When all the advantages of a project or measure are fully known to those who are called to act on it, nothing need be apprehended; but, on very important questions, many who are required to act must necessarily be governed by the representa-tions and arguments of others. Those should therefore look to the very source of opposition and support of a measure, in the absense of stronger evidence to test the accuracy of the alleged facts and arguments by which it is sustained. An object of improvement is proposed its beneficial effect is first examined: in this all agree. Then, what are the means to accomplish it? Will it furnish its own income by making a return upon the outlay, by duty or toll imposed on its use to is the whole advantage from it an increase of the individual prosperity and wealth of the country? Under the last class of improvements must be placed public highways, bridges, har-bours, &c. (The Welland Canal Harbours have not endeed been se made,—but in most cases they are

and should be, sustained by the public fonds.) Thowants of the community, and the direct means to make such works, have been viewed by many cautious politicians as the only landmarks by which action upon them should be governed. In opening a road by public appropriation, no one in this country everproposed making the person using it pay for that use by imposing a toll upon it. The cause of such forbearance is evident;—the very object in making it would be defeated: No settler could afford to use it; and the country must remain a wilderness. Canals have, however, been usually properly placed under the other class of improvements from which a direct return, or a part at least, of the outlay for their construction and support, should be expected, -because their convenience is demanded by the increased population and wealth of the Country after the first stages of settlement shall have been passed. The prospect of repayment from them by tolls becomes an object for preliminary examination. For the accomplishment of such objects, it has frequently occurred that Government has called in aid, and united with their measures individual attention, enterprise, and interest. The motives for this combination have been very various in different countries, and different instances in the same country. I only say such has often been the policy. I shall, before I close this communication, have occasion to refer to the relations and duties of the parties thus mutually interested. The question, whether a Canal will pay, once settled, its practicability proved, the work commenced and in progress, if undertaken by the public, a pledge that it shall be completed is thus given, which nothing but the positive want of ability should be permitted to violate. What is this ability? In what does it consist, and how may it be applied? I ever, with a consciousness that I am sustained by sufficient proof, that there is no territory or Government whose finances are better situated, whose resources are more certain or commandable, and whose country is better placed for profitable improvement, with the expectation of immediate return, than the Province of Upper Canada. I have been furnished withabstracts from reports, from which it appears that the revenue of the province for the last few years has been rapidly increasing; and although the expenditures have also increased, yet the proportion, except for such objects as must make a full return upon the outlay, has been no way equal to such increase of revenue. In the present year, including only a regular dividend on the Bank Stock, and the probable direct income from the various investments made for public improvement which produce a return, the amount of revenue will exceed £80,000, estimating the permanent expense at £30,000 exclusive of the interest on loans, and a more favourable state of things can scarcely be desired. I make this statement of expenditure more to draw attention, than with any pretension to a knowledge of its accuracy. Whatever the balance at present, or reasonably anticipated may be, that with the expected return from the outlay, forms the legitimate basis for the credit of a Government, and may advantageously be used for the extension and improvement of the sources of revenue. Thus it would appear that the Province now possess an income, the greater part of which is derived from a very moderate impost, of about 250,000 above all the necessary calls upon it, for disbursements of Government. The legal Provincial interest is 6 per cent. You have then a foundation for a fund for internal improvements which will bear hard on nothing, create not a penny more of taxation to the amount of £800,000. The result of such improvement, when made, is as certain, and founded on as fixed a law of society, as a flow of water is on a law of nature. If the improvement shall pay no interest on the outlay, except to sustain itself in repairs, the increase of the revenue will be in proportion to the population and wealth introduced and fostered by it. Thus the actual resources of the government and the state of the country are substantially improved. Is this result doubtful? Does not the policy and experience of every country in the world prove it? In the United States, by the Federal constitution,

all revenue from foreign commerce, has been trans-The commer ferred to the Federal government. cial intercourse between the States, by an inhibition in the same instrument, cannot be taxed. The subject of internal improvements has hitherto almost wholly been attended to by each state, within its own territorial limits only. Thus cut off from any reliance on an income which you possess, and many of them having no other advantage equal to yours, it may not be deemed irrevelant briefly to shew, how some of these States have viewed and appled their remaining resources. New York has constructed Canals throughout the state, incurred for them a debt of many millions, and in five years more, (fifteen years from the time of their completion) the whole debt so incurred with the interest, will be paid by the income from the interest itself. Many of the other States are also constructing similar works at their own expenses, to which I have before alluded, and they do not think themselves poorer in consequence of the debt created for them.

Pennsylvania and Ohio are expending largely, and New York is also extending her Canals. parison between your resources and any of these States, the most prominent and prosperous of the whole confederation, is much in your favor. revenue from imposts and tonnage benefitted and increased by these very improvements, is not at all under their control. Yet they understand well the under their control. beneficial effects of such operations, and have no apprehension from any debt incurred for their construction; the works afford the means for paying the debt. The improvements you have now in contemplation, and those already made, present more favorable prospects for return than any other. is no light in which they can be viewed, from which a stronger hope of return may not be entertained, than from any of those named. Instead of being a load, they may be made a source The Welland and the of additional revenue. Saint. Lawrence Canals, although distinct undertakings, are projects intimately connected in inter-Which should have been first made, is not now a question for discussion more than the particular termination of the Welland Canal at either extremity. It may be a subject of gratification to some, and regret to others; but it is done. I discuss the present and the future only. The past I have used merely in reference to the justice of the country, and as others may regard it in a different light, or see it through another medium, even that is done with the utmost deference to the opinious of disinterested men. The Burlington Bay Canal has been completed, and although its actual cost has been quadruple

the anticipated sum, yet there is no doubt of its making an ample return of interest upon the outlay. It is comparatively a small work. Refer to your receipts of custom as exhibited in the official accounts; look at the increased population and wealth in its vicinity; add to these the tolls received for its use; and I would ask, has not the country gained by its construction? Are you loaded with debt for it? or rather may it not with propriety be asked, Is there any one so regardless of his reputation for intellect or ingenuousness, as not to acknowledge, that it has increased your revenue and aided in filling your Treasury? This is a government work and the 30,000 for its cost is acknowledged to be well expended. So in effect, although not in general acknowledgment, it is with the Welland Canal. Its partial use and anticipated completion have already reduced the rate of transportation for the benefit of your agricultural community more than two thirds. With regard to the value of property above the Canal, it cannot surely be necessary for me to use argument to shew that a man, the product of whose farm is worth more at his own door in consequence of the diminished price of transportation, is thus far an actual gainer by the improvement, and his farm itself more valuable in proportion to the amount thus saved in transportation and the product thereof. This is still the incipient and imperfect stage. I have before spoken of its tolls. It is impossible to limit the amount of transportation upon it except by, its capacity to pass vessels. This is an opinion formed by every person acquainted with the extent and resources of the country. An examination of the map of the Province with a knowledge of the climate, soil, rivers intersecting it every where, and lakes by which it is almost insulated, is enough for any, one open to conviction. The contemplated improvements on the St. Lawrence in point of advantage to the country, are second to no other projects; they are intimately connected in mutual interest with the Welland Canal and are decidedly links of the same. chain. A very small portion of the productions of the country and merchandise would pay an interest in the outlay for the whole line of communication. I must here bestow a few words on a most singular argument on the use of the Welland Canal by American vessels. This is nothing less than that such use impairs the interest of the Canadian Farmer. 1 have before said that formerly one of the arguments used against its prospective productiveness was, that the Americans would never use it—but they do use it, and the ground is now changed. An important aid to the income of the Canal is derived from American industry and enterprise and in an approach to their own seaport. Nothing that they carry comes in competition with any article on your side, so far as the Canal is concerned. How then, I would ask, can such an assertion be entitled to any weight or even momentary attention & A vessel is cleared from the port of Oswego for Cleveland in Ohio having on board merchandise and salt, and she brings back a return cargo of wheat, which is ground at the Oswego Mills, or sent to New York in the grain. In what way in the name of reason does this use of the Canal affect the interest of the Canadian, except that he and his country are benefitted by the tribute thus paid by the Americans for the use of a communication more convenient than their own, thus contributing to a return on the outley and consequent advantage of the Province? If the produce shall be destined for the Canada Market, or for the purpose of sending abroad, the Canal has nothing to do with it in any way, but it is a subject of commercial regulation entirely, and its effect may be commercially examined by others, more beneficially than by me at this time.

I have thus passed over in perhaps too hasty and desultory a manner, subjects of importance, but the shortness of the time allotted prevents my putting it in better order. I will now proceed to a brief examination of three propositions which have been presented for legislative consideration, in relation to the Welland Canal Company and its support.

The situation of the Company has been represent-It is now requisite that immediate measures should be adopted to prepare the Canal for early spring navigation. Engagements for transportation will soon be made, and longer delay may lose a great part of what will otherwise be sent through the canal.

The first Question is shall aid for this work be given by the Government to the full extent of the sum required to put the Canal in a respectable situation, and restore the credit of the Company.

It is said the Government have already aided to an extent far beyond any sum anticipated, and the merits of the undertaking do not warrant any lurther advance.

Another ground taken in opposition, is, that the amount of repairs recommended by Mr. Wright is so large that the Government cannot do it, and that its means are not adequate.

The whole amount required to pay off the debts of the Company, and put the Canal in a complete state for use the next season, will be somewhat less than £50,000.

The Government and individuals are Stockholders in a joint concern. The Government has had its Stock represented in the management of the concerns of the Company by Directors of its own appointment. Every measure adopted by the Board of Directors has had the approbation of the Government Directors. Indeed, there is great satisfaction in being able to make the assertion, that no Board of Directors in eny Company have appeared to me to act with greater attention to the interests entrusted to them, and with more unanimity, than the Directors of the Welland Canal Company, amidst all their discouragements and troubles.

The Government has always been satisfied with the course pursued by its Directors, When the accounts of the Company have been exhibited and examined by Committees of the Commons House of Assembly, their Reports have always expressed satisfaction with them, and been received. The Province has advanced large sums on Loan to promote the work, and holds the Canal for such Loans.

The private Sthckholders can never expect to receive any interest on their Stock, until these Loans are fully provided for. If they had means to aid by Loans, they could not dont except on the foundation of a subsequent lien, which might be endangered by the prior claims of the Government.

The greatest portion of private Stock is held by a fow persons whose means have been exhausted by investing their property in the stock, and they are of course unable to aid any further.

The interest of the Government is great in the work,-I have shown that it has abundant meansand from all these considerations it appears to me almost necessarily to follow, that either in its Government character, to sustain a work of such importance, or as joint proprietor of Stock and partner with a prior lien on the property that effects shuts out the liops of aid from any other quarter, it would not be proper with a due regard to public faith to suffer the Company to die, and then claim the forfeited property.-Our case is however stronger than is above represented. That would be a parallel case of common partners with equal proportional participation in the profits; and yet the partner who had means and refused to aid in such an emergency, with the expectation of advantage from the embarrassment, could scarcely hope to retain a character for integrity. Here however the Government has all the profit, and until the nett dividend shall exceed the interest of the debt and be sufficient to provide for the payment of the principal, the shareholders sustain all the loss. The improvement is in the land-An immense population and millions of wealth will be added, and the revenues of the Province greatly increased; yet the shareholders must wait, and perhaps loose all while the public is reaping its full harvest. This is not an imaginary representation—it is strictly true, and if it shall be deemed proper to act upon this proposition only, I cannot avoid feeling a perfect confidence that the requisite aid will be granted.

There is, however, an opinion very prevalent that it would be better that the Government should own this great channel for commercial intercourse. I entertain no apprehensions of the intrinsic value of the Stock, if we can once be placed on a footing to provide against any contingencies, and be enabled to give assurance that the Canal shall be kept in good order for a single season.

None of the accidents which have occurred have lessened my ideas of the intrinsic value of the property. I know the country by which it will be supported; and the result is inevitable. During the last season the Commissioners addressed letters to the different shareholders, with a request to answer on what terms they would sell their Stock ?--All with whom I am acquainted preferred that an offer should be made, if it was the wish of Government to pos-sess the Canal. They have never considered it worth less than what it cost, including interest. I have also seen two letters from Shareholders in England,—one from the Rev. Mr. Blacow of Liverpool, who appears well acquainted with the Canal and its reasonable prospects, and evidently possesses a degree of accurate topographical intelligence, which, for the proper estimation of its value to the proprietors and the country, it would be very desirable to see more generally diffused even here.

The other is from Messrs Bosanquet, Pitt, and Company: Both letters hold the property in greater estimation, than some of our Shareholders, but not higher than I do. I hope Mr. Merritt, to whom these letters have been addressed, may feel himself at liberty to submit such portions of them as are applicable. On this subject I have nothing further to say: It is a measure resting with Parliament. If no sufficient aid be furnished on such terms, as the Company can take, it appears to me reasonable that arrangements should be made to purchase out a sufficient amount

gardada amedicin

of Stock,—to vest in the Government a control of the work.

If, however, a state of feeling shall exist, which cannot consider the resources of the country, and the abundant means it possesses to aid or purchase, in the light I have endeavoured to present it,—I would then submit, for the purpose of enabling the Directors to offer security on an unincumbered Canal, that the Government relinquish its interest therein on condition that the Stockholders put the Canal in good order, and keep it so. I would not name this proposition, if some gentlemen had not informed me that many members thought this measure preferable to any other.

I am,
With the greatest respect,
Sir,
Your obedient servant,
J. B. YATES.

No. 3.

### REPORT

OF

GOVERNMENT DIRECTORS

ON THE

# HYDRAULICS.

That by the Charter of the Welland Canal Company, the power to use the surplus water of the Canal, or dispose thereof for its benefit, is vested in said Company.

That certain tracts of land belonging to Government, lying along, and in the vicinity of said Canal, were, previous to the construction of the same, so wet and marshy as to be entirely useless and worthless; that in consideration of the probability that these lands would be reclaimed by the Canal passing through the tract, and the facility with which they might be thoroughly drained, a grant thereof was made by the Government to the said Company. The two tracts thus granted, amounting to 16,000 acres. In the latter part of the year 1830, on examining the situation of the property of the Company, not necessary for the navigation of the Canal and its use as a public work, the Directors thought it advisable to offer the whole for sale, including such parcels of land as had been necessarily purchased from individuals except what were required for the use of the The Board appear to the Committee to have acted in the prosecution of this plan with proper caution, and to have done every act requisite to give publicity to the sale, and procure proposals. Committee have examined the Minutes of the Board, and find the following proceedings:-

"October 26th, 1830.

"At a Meeting of the Board of Directors, held this day at St. Catharines-

PRESENT :

A McDonell, Robert Randal, Henry J. Boulton, W. H. Merritt, "It is the opinion of this Board, that if an immediate sale of lands of the Company, together with the Hydraulic privileges, could be effected, it would promote the interest of the Company by the increased toll which must be brought on the Canal for the supply of the various machinery which will be erected, besides the indirect trade which must arise from the business thus created. The Board feel every disposition to promote this object; but as the amount of capital necessary to invest in machinery, &c., must exceed £25,000, to obtain an increase of 15 per cent premium, a sum beyond what the Company may command.

"Resolved, That J. B. Yates be empowered to effect a sale of all the lands and Hydraulic privileges now on or to be on the entire line of the Canal, including the route hereafter to be made to Lake Erie, reserving the entire management and regulation of the waters to the said Company, to preserve the levels throughout, and make, from time to time, such alterations as they may deem necessary for preserving or improving the navigation of or on the Canal —for the sum of £25,000, payable in ten years, with interest, payable yearly, from the 1st day of January next.

"And that the said John B. Yates may have the refusal thereof, for one year; the title to be given on payment of the principal, or any part thereof; and that a contract be entered into with him to that effect, provided the Directors unanimously approve of the measure."

November 3, 1830.

"At a meeting of the Board of Directors, held at the house of the Hon. J. H. Dunn, York.

PRESENT.

John Henry Dunn,
Henry J. Boulton,
William Allan,
W. H. Merritt.

"All the Resolutions made at the last meeting were confirmed, except the proposition of J. B. Yates, Esquire, which, having been taken into consideration, the Directors conceived they would assume too great a responsibility to close with the proposal, without having more information respecting the value of the property to be disposed of; and conceiving they would be rendering the Stockholders all the advantages the sale would possibly afford, by giving it the most extensive publicity.

"Resolved, That the agent be directed to advertise the sale thereof, stating all its advantages, in the newspapers of New York, Boston, and elsewhere in the States; and Montreal, &c., in the Canadas, for which proposals will be received on or before the first day of May ensuing."

In pursuance of the above Resolution, the following advertisement was published; for the fall time, in newspapers in New York, Boston, Montreal, and other places in the Province, put up in handibills; and distributed throughout the country.

# EXTENSIVE SALE OF THE WELLAND

Sealed proposals will be received, for the purchase of the land and Hydraulis, sipations on the entire will like of the Canality be delivered at the Welland Canal bioffice, on or before the 1st day of Marchasests at 12 o'clock.—The offers will specify the highest sum the purchasers are disposed to give, the principal payable in ten years, with an annual interest of 6 per cent from the first day of January, 1831; or the principal to be paid down.

"The LANDED PROPERTY consists-

River dam) on which a Grist Mill, Carding Machine. and three Saw Mills, are now erected on lease. This place is situated five miles from Lake Eric. It commands an extent of country of many miles; no stream leads into the Lake for 25 or 30 miles on either side of it; the river is level for 16 miles, and navigable for rafts, &c. 100 miles above in the spring and fall; and the banks abound with valuable timber and gypsum; of the best description.

Wainfiest and Humberstone. This land is situated the claim of the Canal, and is the richest soil in this part of the country. A Village is already laid out in the centre of this tract, named Marshville, now called Millon, where there is a Mill privilege with 14 feet fall of water.

Third us a series at and below the Aqueduct over ." the Welland River.

"Fourth 75 acres at Port Robinson, on which a Town Plot is laid out, and some lots sold.—It is a wommanding situation, at the junction of the Cunal with the Welland inhaving that river navigable for 30 miles above and 91 below, where it intersects the Ningara .- It is pleasently situated, and will have a taidaily line of Packets the ensuing season passing to and from Buffalo and the Grand River dam.

"Fifth 70 acres at Allanburgh, (foot of the deep cut) on which a Saw Mill is now erected .- This will also be a commanding situation from the Hydraulic power it possesses; being the first fall where the water can be used for the purpose of machinery, and alterwards brought, into a lower level of the Canal. A village is already laid out at this place; and from its being surrounded by a rich and populous country; there is every reason to anticipate a rapid growth.

Sizek—100 acres at the Reservoir near the village of Thorold. There is a Grist Mill containing 4 run of stones, crected in this place, the only mill privilege on the line of the Canal actually disposed of,) and two Saw Mills are building.

There are likewise in the canal actually disposed.

There are likewise in operation a Saw Mill, with There are likewise in operation a Saw Mill, with two Saws, near Centreville; a Grist and Saw Mill, Pail Factory, Turning Lathe, and Furnace, at and near St. Catharines; and a Saw Mill at Port Dalhousie. A Dry Dock for repairing Vessels, is also erecting at the 2nd Lock from the Harbor, and made at the 2nd Lock from the Harbor, and made exemption in the Weitern part of America, no individual or Company will propose to purchase without a personal examination: It is, therefore, only necessary to give a brief online of the advantages which it possesses:

# HYDRAULIC SITUATIONS

The Niagara peninsula, which separates Lakes Erie and Ontario is composed of two table lands; the first extending from Lake Erie to the mountain the first extending from Lake Erie to the mountain ridge, running in a life from Niagara Falls as far up as Paterson's Creek, (Cong Point) a distance of 90 miles, including the Townships of Bertie, Willoughby, Crowland, Humberstone, Wainfleet, Moulton, Canborough, Walpder, Rainham, and part of Woodhouse; and on the opposite side of the Welland River, Stamford, Thorold, Pelham, Caistor, Gainsboro', and Binbrooke. The second table land below the mountain sides continues from Niagara to Dunthe mountain ridge, continues from Niagura to Dundas Creek at the head of Burlington Bay, a distance of about 60 miles, comprising the townships of Niagara, Grantham, Louth, Clinton, Grimsby, Saltfleet, and part of Barton, and it is greater it

The River Welland being almost a dead level. and running parallel with Lake Erie, through nearly the centre of this peninsula, there is not a single stream affording a continual or steady supply of water for an extensive flouring establishment, within the territory above described, except the Grand Riverse Printed and Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed Printed er. It is bounded by the Niagara River on the one side, and by Patterson's Creek, (which empties into Lake Eric,) and Dundas Creek, (a tributary of Burlington Bay,) on the other, both of which are durable streams of considerable power.

"The Western country above this, to a great distance, and the American side opposite, are likewise destrute of water privileges, to any extent; and this is the nearest and most convenient point to which their Merchants and Traders can resort for manufacturing purposes, on a scale commensurate with their wants. It is not necessary however, to take so extended a view of the advantages and importance of the hydraulic power on the line of this Canal. A similar instance in the State of New York, will suffice for example. The small stream leading from Crooked to Saneca Lake in the County of Yates, coly six miles in length has already Flauring Mills only six miles in length, has already Flouring Mills erected upon its banks within sight of each other the whole distance; and no one contains less than three run of stones. Here, the country generally is in a good state of cultivation, and the soil and climate peculiarly adapted to the growing of wheat; consequently, an immediate and increasing demand exists for the erection of Mills and machinery of every description. world madulity

"The extent of water power is unlimited. "The extent of water power is unlimited. The principal situations on the first level are at the Grand River dam, (the point where the Ship. Canal will hereafter enter Lake Erie;) at Marshville, at Robinson, and at Allanburgh, where the first descent takes place? The next are at Thorold; (where the water is brought round four Locks.). From the next the water is brought round four Locks. From the next passes half way down the mountain in rear of the Locks; it then crosses the Canal, and is taken to St. Catharines on the other side, in a distinct raceway or disch.

Thus, in the whole descent of 346 feet, the water Thus, in the whole descent of 346 feet, the water may be used for machinery on each level successively, wholy independent of the Canal, so that the works will not be liable to interruption even should the water be arawn off the main levels for the purpose of making repairs a say to read out our comments of the same for

"To make this purchase profitable, it will be necessary to expend a large amount of capital, immedi-

ately; therefore, no application will be received unless the parties shew, to the satisfaction of the Board that they can command the means to effect the designed objects.

By order of the Board of Directors.

"(Signed)

"WM. MAMILTON MERRITT,

Agent."

"Welland Canal Office, St. Catharines, 8th Deer. 1830."

After the expiration of this time, and giving a full opportunity for proposals by waiting some time longer, on the 11th May 1831.

At a meeting of the Board of Directors held this day at St. Catharines,—

### PRESENT:

The Hon. John H. Dunn, President. Alex. McDonell, Vice President,

Hon. William Allan, H. J. Boulton, Robert Randal, John Warren, W. H. Merritt,

Directors.

Whereas public notice having been given, that proposals would be received for the purchase of all the real Estate and Hydraulic privileges belonging to the Welland Canal Company, and no proposal having been received so advantageous as the one by Mr. Yates, it is therefore—

"Resolved, That the proposition of Mr. Yates, be accepted, and that a contract be executed pursuant to the terms thereof, the interest on which is to commence on the 1st day of January, 1832, with the principal payable in ten years."

2nd June. 1831.

At a meeting of the Directors, held at the Welland Canal Office,-

#### PRESENT:

The Hon. John H. Dunn, President.

William Allan, A. Macdonell, Robert Randal, Thomas Butler, John Warren,

Directors.

"Resolved, That a Surveyor be employed to designate and establish the boundary of the Canal throughout, under the direction of Mr. Macdonell, who will submit the plan of the same for the sanction of the Board, as soon as completed.

"Resolved, That a deed of the above lands be made out to Alexander Macdonell; Esq., at the request of J. B. Yates, Esq., he not being authorised to hold real exacte in the Province; and that a Bond' and Mortgage be made out and executed by Mr. Macdonell, for payment of the consideration and interest and that Mr. Yates execute the Bond with him."

On the 20th June, a Resolution was passed appointing Mr. George Keefer, June, to make the survey pursuant to the resolution of 2nd June.

The whole transaction appears thus to have been conducted, with due deliberation and the most proper exertions to procure as large an offer as could be obtained.

From the Resolution passed on the 2nd May, 1831, the Committee inferred that the Board of Directors did not consider the former offer not Mr. Yates, to purchase properly, under their consideration. On inquiry it has been represented to the Committee, that it was so far beyond any offer that had been received, that the Board desired a renewal of it if he was still willing to purchase - It appeared also, that the sum named at the first meeting was considered more as an expression of histown confidence in the actual value of the proporty; than a desire to become a purchaser being a sum far beyond the then estimation of any other person except Mr. Merritt, by whom the committee has been informed that he had not the least doubt, with the expenditure of a capital upon it, in the hands of active and enterprising men, the property would be very valuable. He was desirous to self, because he thought the country and company would derive more, benefit from it, than if it remained in the hands of the Com-In order to enable Mr. Yates to induce other men of capital to unite with him, he gave his opinion of the prospective value of the property.

Owing to various causes which have at different times been stated in public documents, the navigation of the Canal and the improvements on it have been procrastinated, and although a large sum of money has been expended by the purchasers yet the discouragements have hitherto prevented the advantages that otherwise would have been received from the outlay.

The Canal now being completed, the actual value of the purchase is fully perceptible, and the prospect is good, that the Hydraulic Company, (as the purchasers with Mr. Yates have called themselves) will be amply paid for their outlay, enterprise and attention.

During the last year, an unexpected inconvenience has been experienced from the use of the water in many places; and inasmuch as some sacrifice on the part of the Hydraulic Company, of a portion of the water power, where they have expended large sums in improvements, must necessarily be made, to sustain an advantageous head of water in the Canal; and serious differences of opinion may exist in relation to the manner of regulating the use of the water at such places, it has been deemed expedient by the Committee to open a negotiation for the repurchase thereof by the Welland Canal Company.

Much of the expenditure of the Hydraulic Company, has been in an endeavour to drain and improve the value of the large tract of land in Wainfleet and Humberstone, in which they have been so far successful as to make it evident that the whole tract must become very valuable. The Hydraulic Company have offered to reconvey all the property with their expenditure upon the whole improvements, in consideration of a discharge of the Bond and Mortgage, and that the Welland Canal Company give their bonds for £25,000, payable in 1874, with 6 percent interest, one half semi-annually.

Although the Committee are of opinion that the whole property is now worth rather more than this sum; yet considering the relative situations of the parties, they thought the Hydraulic Company should not look for a full compensation for the actual value of the property; but be contented with a liberal compensation for their attention and hazard, and an ample return for their outlay and profit upon it.

In this view, the committee did inform them, that they would recommend, on the reconveyance afore said, the issue of the obligations of the Welland Canal Company on the terms named, for £17,500—in answer to which the committee was informed that this offer would be taken, with the exception of the small portion of the property at Allanburgh, and the small portion of the property at Allanburgh, and the sware of Colbone for which the Hydraulic Company semi-annually, a sum which together with the annual rents and the interest on sales of the aforesaid property to be by them re-conveyed, shall be equal to the interest on the aforesaid sum of £17,500, due on the bonds given for the repurchase of the same.

In this view which the committee have taken of the actual value of the whole of this property, and with the conviction they have that the Welland Canal Company should re-possess it, and at the same time do ample justice to those gentlemen who have made the utmost efforts in their power to improve it.

Your Committee recommend to the Board of Directors the acceptance of the latter offer.

All which is most respectfully submitted.

(Signed) CHARLES DUNCOMBE, WM, ELLIOTT, WM, CHISHOLM,

Welland Canal Office, 7th June, 1834.

# No: 4. AGREEMENT

MADE WITH J. B. YATES, ESQ.

ARTICLES of agreement made this ninth day of June, in the year one thousand eight hundred and thirty four, between the President and Directors of the Welland Canal Company and Alexander McDonoll, John B. Yates, and Ogden Creighton of the second part.

Whereas the Welland Canal Company have heretofore sold to John B. Yates the real estate and Hydraulic power belonging, to said Company for the
consideration of twenty five thousand pounds, as the
same is more particularly described in a Deed from
the Welland Canal Company to Alexander McDonell, who helds the same for the party of the second
part. And whereas the said Alexander McDonell
executed a merigage for the said consideration money, and accompanied by a bond as collateral for the
same smount, payable as ten years from the first day
of Jamuiry. Sighteen sundred and thirty two, with
the intensit thereon, payable yearly on the first day
of Jamary. And whereas, further, it has been
thought advisable on the part of said Company to
reposees the greater part of said property so as to
enable the Company more fully to control the oper-

ations on said Canal. It is therefore agreed by and between the parties aforesaid, in consideration of the sum of seventeen thousand five hundred pounds, the said Alexander McDonell shall re-convey to the said Welland Canal Company all the aforesaid hydraulic power and real estate, except the part lying on the mountain near the east end of the summit level, at a place called Allanburgh, and the lot and property at Gravelly Bay, and also that the said Alexander Mc-Donell execute to the said Company a conveyance of such property as may have been purchased by him near the village of St. Catharines from Oliver Phelps, together with an assignment of all obligations yet due and unpaid, and all leases for property or water power sold or leased, or all other portions of said property except that reserved at Allanburgh as aforesaid. The said conveyances to be executed when required by said Company after the following conditions shall be complied with. The said Company on its part, agrees to execute in due form of law, a discharge of the Bond and Mortgage aforesaid and issue also when required the Notes or obligations of the Company, for seventeen thousand five hundred pounds, in sums of two hundred and fifty pounds each, payable in the year eighteen hundred and seventy four, on the first day of January, bearing an interest of six per cent per annum, payable half yearly on the first days of July and January, at the Office of the Welland Canal Company, to commence running on the first day of January last. The said obligations shall be drawn payable to the order of Alexander McDonell and indorsed by him, the Scal of said Company being first impressed thereon and signed by the President of the said Company, and countersigned by the Secretary, and that the same be then transferable by the holder thereof as shares of the capital Stock in said Company are now transferable, except that an endorsment by the holder thereof shall be a sufficient evidence of transfer instead of a regular power of Attorney—That a separate book shall be provided for the entry of such transfer.

It is further agreed that if in consequence of any legislative alteration of opinion heretofore expressed in relation to such an arrangement the legislature shall at their next session, by resolution, express an opinion that such repurchase is not necessary, the said Welland Canal Company shall be desirous to rescind this agreement now made and shall within three months thereafter give due notice thereof to the party the said party of the second part stipulate in case the property shall be placed in the state in which it now is they will consent to such a measure and will return to the Welland Canal Company all the bonds or obligations which shall have been issued and received as aforesaid.

And whereas the income from the property thus reconveyed and sold to the Welland Canal Company may not equal for a short time the semi-annual interest on the obligations, the said party of the second part agree that it the amount of reserved rent money received or sales and proceeds of sales of timber or any product of the land shall not equal the semi-annual interest on the obligations aforesaid they will pay an amount sufficient to pay such deficiency to the Treasurer of the Company by way of rent for the property and water at Allanburgh and the lot at Gravelly Bay.—In Witness whereof the said Welland Canal Company have caused the seal of the said Company to be affixed to this agreement and signed

by the President and the said party of the second part have set their hands and seals at the Canal office in St. Catharines on the day and year aforesaid.

Signed, sealed, and delivered in presence of

## No. 5.

# REPORT

10 OF THE

### BOARD OF DIRECTORS, FOR 1834.

Fo the last official Report made by the Board of Directors, on the 1st of March 1833, they beg leave to refer the Stockholders and those interested in the assistate of the Welland Canal. 2004 and innivant of to

During the same year (Oct. 3,) a Report was made by Benjamin Wright Esq., a celebrated American Engineer, employed by order of the Legislature, who examined the entire Canal and recommended various improvements on a scale commensurate with the extent of country connected therewith... On the Tth December a general Report was published by Commissioners appointed by the Legislature, W. B. Robinson, J. Macaulay, and Absalom Shade Esquires; and on 30th June the Report of a Committee of the Commons House of Assembly of this Province, accompanied by a Letter from J. B. Yates Esqr., one of the most extensive Stockholders, containing a great variety of information on the subject of the Canal, and the different opinions then entertained respecting it, were also published—which Reports were forwarded to our different Agents for the information of the Stockholders generally-in consequence of which the Directors decmed it unnecessary for them to publish any further Report for that year.

The Directors regret being unable to announce to the Stockholders the final adjustment of all claims for lands, damages, &c., in consequence of the Arbitrators appointed by the Legislature not having found it convenient to meet for that purpose. It is hoped provision will be made the ensuing Session to avoid further delay. They have endeavored during the past season to carry into effect the measures reccommended in their Report of 1833; although from the late period when aid was afforded by the Legis-

the do the per course of the models of the section.

lature little progress could be made before the navi-gation commenced? Every part of the work (which could be prosecuted without interrupting the navigation) has been completed; Grand River dam thoroughly gravelled, and a plential supply of water thereby secured. The piers at Grand River Harbor thereby secured. The piers at Grand River Harbor thave been extended and filled, which renders that Harbor as extensive and commodities as any on Lake Eries a non-value and for a secure of the commodities.

The piers and Harbor at Port Colborne, the com-mencement of the Ship Canal on Lake Erie, are nearly finished; together with the Light House, and placed in a state of security.

Contracts are entered into for extending the Lock at Port Colborne to 125 feet in length .- widening the Canal from thence to the rock, six feet and cutting a Basin for vessels to pass or turn on the North side of the Lock at the Hurbor-for deepening the rock excavation at the curve on the new route twelve inches-widening the Canal from the Junction to nones—widening the Canal from the Junction to Port. Robinson—making a guard gate at Port Colborne, and one at the Junction—a Culvert at Hall Davis' level—and deepening the Canal from one foot to eighteen inches from Campbell's Lock to Davis' basin, and the cutfrom Mariatt's level to Lock Not 35 in Thorold—and for extending the West pier at Port Dalhousie in a line with the East.

Also, for deepening, and widening the feeder from

Also, for deepening and widening the feeder from the junction to the curve; and culting basins every half mile for the passing of Steam Boats, making a culvert at Broad Creek, and extending the berm bank from thence to Cramberry Creek, all of which are now in a rapid state of progress.

To effect these objects great sacrifices were indispensable. The Canal had to be closed as early as the 15th November, of which due notice was given, and consequently the loss of the greater part of the Fall business has been unavoidable.

It was gratifying to the Directors to witness the readiness with which those interested in the trade entered into their view, and relinquished the remaining business of the present year to ensure an early transit the ensuing scason.

The public are generally aware that one of the most prominent features in this Capal is the ppening of the navigation before the lower part of Lake Rrie is clear of ice; an advantage which, up to the present moment, for want of means, has never been realised, though the mature of the work decidedly admits of it.

The Directors have named the first day of April of there ensuing season for opening, the Canal—and they are resolved that the improvements now, moperation shall not interfere with that determination. To encourage emulation for an early transit, the larset the Captain of the first vessel over hity tons burden; which may arrive at Poit Dalhousie liden with merchandize from New York destined for any port on the upper Lakes—and one hundred dollars to the Captain of the first vessel over hity tons burden; which may arrive at Dunnville on Grand River with produce from Cleveland, or any port above at the produce from Cleveland, or any port above at destined for New York market; and as they believe an interchange of commodities may take place between New York and ports on the upper Lakes by this channel in ordinary seasons, one month carrier

than by way of Buffalo. They will also give the same premiums to the first vessel over fifty tone burden which may arrive at Port Dalhousie from either Prescott, Brockville, or Kingston, laden with merchandize from Montreal market destined for the British ports on Lake Erie; or at Dunnville from Port Stanley or shove it.

The uninterrupted navigation of the Canal throughout several months of the past season has afforded the utmost confidence to all those interested in it; and owners and masters of vessels are now fully satisfied that both a profitable and certain business may be transacted through it. In proof of this, the Directors are advised of twenty new vessels of the largest class being in course of building on the American side, purposely for this trade.

There is also a degree of activity prevailing in the ports on our own side not heretofore witnessed.— Vessels are building suited to the double voyage, which cannot fail to give an impulse to the Western parts of this Province, where it has hitherto been much required.

An opening has also been made into the interior of one of the finest portions of the country through the exertions of the Grand River Navigation Company. This improvement will in effect extend the Welland Canal to Brantford on the Grand River, and afford the means of a cheap und ready conveyance for all the produce and merchandise within the influence of that noble stream, and the country west

The period has at length arrived when the inhabitants of the Province begin to realise the advantages of this undertaking; and a general desire prevails to make it a Provincial work. This measure was strongly recommended by the late Commissioners, and the principal, obstacle to its accomplishment during the last session of the Legislature, appeared to be the sale of the Hydraulic works. The first proceeding of the Directors appointed by the Legislature was to enter into a negotiation with the proprietors for a repurchase of this property, which has been effected:

The Directors deem it unnecessary to enter into either a general or detailed statement of the advantages derived from the Welland Canal, or the impetus it has been the means of giving to other improvements. The public opinion regarding it has been fully expressed in the various addresses and resolutions of the House of Assembly to the Home Government and the Legislature of Lower Canada; and its importance is now very generally felt, and acknowledged.

The last session of the Provincial Legislature increased the Capital Stock of this Company to £250, 000, and authorised the subscription on the part of the Government of £50,000, for the purpose of paying off the debts of the Company and putting the Canalin asstate/of repair, which has been, and still is, in progress.

The total expenditure on the Canal ap to Nov. 1833, was .... 2362,478 1 01 By the Commissioners during that year, on account of Stock taken 7,500 0:0

by the Provincial Government. By do: out of the funds of the 253 11 5 Company .....

During the present year, 1834, including payments of old debts.

40,847 14

£411,079 6 111

There has passed through the Canal the present scason, 570 Schooners, 334 Boats and Scows, and 66 Rafts-the amount of tonnage of which is 37,927 and the following quantities of produce, merchandize, &c. &c.

1,297,892 feet of Lumber.

307,963 Pipe Staves:

84,092 West India Staves.

94,380 cubic feet of square Timber.

5,939 Saw Logs. 264,919 bushels of Wheat.

27,7021 barrels of Flour. 23,4221 barrels of Pork and Beef.

59,641 barrels of Salt.

3,216 bushels of Potatoes.

223 bushels of Oats.

200 bushels of Corn.

382 barrels of Whiskey.

5301 barrels of Lard.

1,694 kegs of Lard.

46 kegs of Butter.

96 barrels of Ashes.

44 hogsheads Tobacco.

127 kegs Tobacco.

145 boxes Glass.

105 barrels dry Fruit.

59 barrels Nuts:

201 barrels Apples.
6½ barrels Fish.

20 empty barrels.

931 barrels Bacon and Hams.

22 tons Bacon and Hams, 399 tons Coal. 77 tons Gypsum and Plaster. 117 barrels Ground do.

94 tons Pig Iron.

338 tons Castings. 30% tons Grind Stones.

2 tons Mill Stones.

41 tons Furniture.

9 tons damaged Rope.

2 tons Bran.

2 tons Hay.

4 tons Hides.

5 tons Bagging. 21 tons Horns.

8 cwt. Sheep Skins.

60,500 Shingles.

65 barrels Onions.

16 barrels Beer.

47 barrels Cider.
4 barrels Crackers.

22 barrels Oysters. 3 barrels Vinegar.

1 Barrel Pitch.

30 Ploughs. 25 casks Cheese.

F6

This article is found in abundance adjoining the Ohio Canal; it is the first attempt to introduce it on the shores of Lake Ontarie. The increase of this trade can be readily realised by those nequainted with our climate.

28 barrels Grease.
6 bags Feathers.
1,000 Rails.
29 small Packages.
1,880 tons Merchandize.

The amount of Toll in 1832 was...£,2432 7 8 4 in 1833..... 3,618 1 74 And in 1834..... 4,300 8 5 4

Although the income of the Canal during the present season does not present the same ratio of increase with the former, the difference is chiefly to be ascribed to the early close of the navigation and decrease of business in the months of June and July, owing to the total interruption in the navigation of the Ohio Canal. Notwithstanding which our staple articles have been greatly increased, viz.:—

	1832	1833	1834
Barrels of pork	5422	9611 .	$23422\frac{1}{2}$
Duchala of wheat	l 5517U	229010 .	.202010

Royrola of salt	34546	46552	• 50004
Tons of merchandise	1032	13234.	10004
No. of Schooners passed	240.	, 433	570
No. of boats & scows	175.	. 287	. 334

The unexampled increase of commerce on the Western waters has for some time arrested the attention of the different State Legislatures adjacent thereto.

It appears that in 1814 there was but one Steam Boat on the Mississippi river—in 1833 they numbered 315. The increase on Lake Erie, including vessels, is nearly in the same ratio. The Legislature of the State of New York gave the first impulse to the commerce on Lake Erie, by the construction of the Eric Canal; and as a just and natural consequence are now reaping the earliest reward, by conveying the greater part of its products to the Hudson.

The Legislature of the State of Pennsylvania are making the most gigantic efforts to divert a portion of this commerce to the Delaware; they have already constructed a Canal of much larger dimensions than the Eric—(with the addition of a Rail road over the summit of the Allegany Mountains)—to the Ohio river, from whence they intersect Lake Eric at the Town of Eric, Pennsylvania. No obstacle appals them—the highest mountains, the deepest valleys, the most precipitous descents, the most ungovernable rivers, are surmounted; and although an expenditure has already been incurred by the State of nearly \$30,000,000 for various improvements, experience proves, from the returns made by those portions already finished that they are warranted to proceed.

By a report of Mr. Mercer, Chairman of the Committee on Canals and Rail Roads, published 24th.

June last, the construction of a ship Canal between lake Michigan and the Mississippi, by the Illinois River, is strongly recommended to the consideration of Congress. As this is a project in which the inhabitants of the whole Continent of America must feel a mutual interest, we copy the report of C. Gratiot Esq. Chief Engineer. (See Appendix to this Report, A.)

It may not be generally known that it requires a Canal of only 27 miles to connect the Ocean with Lake Ontario—28 miles to connect Lake Ontario to Lake Erie, and 92 miles to connect Lake Michigan with Illinois river, (the summit of which is but 27 miles,) requiring only artificial ship or steam navigation of 147 miles to connect the Gulphs of Mexico and St. Lawrence through the interior of this continent. We also insert an extract from the Report of B. Wright Esq. on the St. Lawrence (See Report Appendix marked B.) which cannot fail to impress on the minds of those concerned the decided advantages which must arise to the public by constructing a canal at this point on the enlarged dimensions.

Although the inhabitants of these Provinces have witnessed the entire loss of the Western Trade, with a degree of supineness not to be satisfactorily accounted for, it is cheering to know that the Legislature of this Province have commenced the improvement of the St. Lawrence on a scale commensurate to the objects. The Locks are 200 × 55 feet, with nine feet depth of water. It is to be hoped measures will be adopted the ensuing session to continue this scale through the Lower Province; which will in effect make those interior waters a sea coast, and extend the commerce of the St. Lawrence beyond the most sanguine expectations of those who may now be considered enthusiasts.

The difficulties and expense of navigating the St. Lawrence are far greater than is generally suppos-The amount of trade or commerce through that channel is a mere bagatelle compared with what is directed to the New York market. It appears that 264,919 bushels of wheat were conveyed through the Welland Canal last season; of which only 18,464 bushels, came from our ports on Lake Erie, and 22,-170 from American ports destined for Montreal Market; and the remaining 224,285 were conveyed to Oswego; whereas if the .St. Lawrence were made navigable it would be difficult prescribing bounds to the quantity which would be diverted by this channel to foreign markets, or the quantity of merchandize in return for the supply of the Western Country. It is supposed that merchandise from London would be conveyed to Cleveland for £2 10 per ton, which now costs £3 to £4 from Montreal to Prescott, a distance of 130 miles.

Although the expense of the Welland Canal has far exceeded the amount contemplated, the Directors have still every confidence in the belief that it will ultimately prove a profitable investment. From the information received from those interested in this line of communication; and the state in which the Canal will be placed at the opening of the navigation, they have every reason to estimate the tolls for the ensuing season at £12,500; and from the rapid increase of population in the extensive regions connected, its favorable location, and consequent cheap-

^{*} The amounts here stated are greater than those to be found in the Journals of the House of Assembly, because the Returns swere made before the navigation closed.

ness of transit, they may fairly look forward to a progressive increase for many years.

WELLAND CANAL OFFICE, St. Catharines, Jan. 7, 1835.

APPENDIX TO FOREGOING REPORT.

[A.]

## REPORT

OF

C. GRATOIT, ESQ., CHIEF ENGINEER.

To the Chairman of the Committee on Canals and Rail Roads in the Congress of the United States.

Engineer Department, Washington, June 6th, 1834.

Sin,

I have had the honor to receive your note of the 16th ultimo, respecting the contemplated canal to connect the Illinois river with Lake Michigan; and regret that almost perpetual engagements have not allowed me to reply to it before. There is nothing on the files of this department relating to this work. A survey of the route was made some time since, and I believe an estimate, but they are lodged in the Topographical Bureau, to the chief of which I begleave respectfully to refer you. You have been pleased to ask my view of making this a steam boat canal and I take great pleasure in giving them, althowant of sufficient data will not permit me to enter into any thing like detail, or to aim at argument in the ideas which I shall offer.—This subject has long since attracted my attention; as it has indeed, that of every person who had reflected upon the sapid developement of the resources of the country throwhich it is proposed to carry this canal.

By an inspection of the map of the United States, it will be perceived that a connection between the two great valleys of the U. States must be created at various points to enable the people who inhabit them to carry on with each other, and with those of the Atlantic States, the extensive intercourse that must subsist between them at no distant day. New York subsist between them at no distant day. and Ohio have, by their canals, contributed largely to this Union the canals and rail roads of Pennsylvania, the Chesapeake and Ohio canal, and Baltimore and Ohio rail road, though as yet in their incipiency, have the same object: But of all the projects having this great design that which contemplates the union of Lake Michigan with the Mississippi by the Illinois River, is, without doubt, both on account of the case with which a may be accomplished, and the vast extentrof navigable waters it will connect the most important. Its effect will be to unite the St. Lawrence with the Gulf of Mexico; to create a dependance

founded upon mutual interests between the vast territory watered by the Mississippi, with its extensive tributaries, and that bordering on the Lakes and the St. Lawrence.

There would seem to be, in a position such as this, and to accomplish objects so vast, no question as to which of the usual means, rail road or canal should be resorted to. The exclusive character of the first; the repeated handling of the commodities transported over it, always attended with expense; the complication of machinery, and the consequent liability to accident and detention as well as the principle of rapid decay, inseparable from the materials used in its construction, seem to offer to my mind objections not to be overcome. A Canal, on the contrary, would afford facilities commensurate with the great thoroughfares it would connect, and the vast amount of product affoat upon them during a greater portion of the year, or in waiting upon their shores. It would be alike open to the merchant with his accumulated products of every region from the Yellow Stone to the Sabine, from Lake Superior to Quebec, and to the humble farmer upon its very margin with the less valuable, though to him equally important returns from his little farm. Besides nature herself eems to have contemplated this mode of connexion. The great basin of the Lakes, except at its edge, is higher than any point over which the Canal will have to pass, and presents the appearance of a great reservoir, specially designed to furnish in superfluces abundance, the great desideratum of works of kind. A writer well acquainted with the features of that region of country, observes, in the North American review, vol. 26, page 361: "There is not perhaps on the Globe a place where such a mighty Physical revolution could be produced with so little human labor as by opening a communication between Lake Michigan and some of the upper tributaries of the Illinois. The Des Plaines which is a considerable stream, rises in the country between the Mississippi and Lake Michigan, and pursuing a southerly course approaches within twelve miles of the Leke. The intermediate Land is a level Prairie, stretching in every direction as far as the eye can reach. extreme elevation above the lake is 17 feet, and that feeble barrier is all that is interposed between this mighty mass of water and the rich valley of the Mississippi, which it overhangs like an avalanche on the summit of the Alps." Such is the country over which this improvement would have to be made.

Commencing at the junction of the Rigolet wir's the Chicago River, it would pass by an easy single cut through this barrier for a distance of 27 miles, with an average depth of about 20 feet, where it would reach a point in the natural surface of the ground 10 feet below the usual level of the Lake; from this point, it would make the right bank of the Illinois, and enter the stream at the mouth of the Fox or Vermillion River, passing, in that distance of 62 or 65 miles over an almost uniform gentle, and unbroken slope of 22 feet to a mile. The fine valley of the Illinois is skirted by steep and prominent bluffs: those of the right bank being so uniform and running in a direction so well suited to the purpose, as to give reasonable hopes that the Canal may be made to wash their base, and to rest upon the natural surface, thus affording the great advantage, with such a supply of water as may be drawn from the Lakes, of increasing its width to any desired extent, at

no additional but rather diminished extent. question here presents itself, what should be the dimensions of the Canal ?-Should they be limited to the present wants of that region of country !- Or should they be determined by the admonitions furnished by experience on the New York Canal, where the unfortunate mistake in its dimensions is so frequently and severely felt as to have given rise to the project of a ship canal to subserve the same purposes, and the data to be drawn from the heretofore great and rapid increase of population along the shores of the Lakes and those of the upper Mississippi ?-I think the latter; and when we look to our experience on the Lakes and see how great has been the spirit of enterprise created by the facilities of intercourse afforded by the comparatively trifling improvements on their southern shores it really seems that the trade must soon justify almost any dimensions that can well be given. I should therefore recommend most emphatically, that, from the Lake to the termination of the single cut the width should be 200 feet, and the depth 10 feet; and from this latter point to the debouche into the Illinois, the minimum which should be 100, and the depth at least 6 feet; this would enable the steam and other crafts navigating the Lakes and the Western Waters, to approach a common point, and afford accommodation during the operation of transferring or exchanging cargoes. You are aware that the surfuce of the Lakes is subject to periodical fluctua-tions: this reach of 26 miles, 200 feet wide and 10 feet deep, would effectually provide against any inconvenience that might otherwise arise from this cause .- It would, besides, readily afford all the water required for Lockage in the lower section of the Canal, without creating a sensible current on the summit. By this arrangement, the supply of water would be constant and most abundant, however great the draught might be; and would be divested of sediment so common to small streams, particularly in times freshets, and which makes them so objectionable for the purpose of feeders.—The Des Plaines should, therefore he diverted from its present course, and made to discharge itself into the Chicago River; this would moreover be attended with the precious advantage of keeping open the entrance to the harbour at the mouth of the latter stream by increasing the volume and velocity of the water which passes through it at certain seasons .- I regret that I have not the means of submitting an estimate of the cost of this great and important work; but I feel justified by the history of that country, and my own observations as I passed through a portion of it last summer, in saying that, cost what it may, the wants of the people of that region, and those inhabiting the great valleys referred to, will, ere leng, require its construction, and to the magnitude here proposed. The map which will be handed to you by the bearer is one prepared for my private use; I have sent it, believing that it may afford you some assistance; and allow me to request that you will be pleased to return it ... soon as you shall have no further use for it. With great respect,

Sir.

I am, Your most obedient servant, C. GRATIOT, Chief Engincer.

To the Honorable CHARLES F. MERCER, Chairman, B.

# EXTRACT OF A LETTER

FROM

BENJAMIN WRIGHT, ESQ.

TO THE

COMMISSIONERS FOR THE IMPROVEMENT OF THE ST. LAWRENCE.

As all the Rapids, between Lake St. Francis and Lake St. Lewis, are of this character, and will require descending, as well as ascending Boats to pass through them, Mr. Mills has adapted his plans and calculations to such size Canal: and upon full reflec-tion and examination, I am perfectly convinced, that this sized work is the best and cheapest which can be made for the St. Lawrence to transport cheap, and also expeditiously.

That it is cheaper in its construction than a good Boat Canal adapted to Horse power, for Boats of 50 or 60 tons is, I think, easily demonstrated if we apply the plan to the Upper and Lower Provinces.

This opinion may appear bold to those who have not well considered the whole ground in detail as an To such I will make a statement to shew Engineer. the truth of my assertion.

There are three methods of moving power for transportation.

1st. By wind and sails on Lakes and gentle water. 2nd. By Horse power and men's labor on Canals, and wind and sails on Lakes.

3rd. By steam power on Lakes, Rivers and Canals.

If we were to adopt a Canal of 5 feet water and Locks of 20 feet in width, we should apply horse power on the Canals and steam towing power on the Lakes. But on that part of the River where we now intend to use steam power without any improvement we should be under the necessity of making an independent Canal, inland, a distance between Prescott and Lachine of 35 to 40 miles, or we should be under the necessity of making a good towing path along the shore of the river, the distance above mentioned, and the great shallow bays and irregularity in the formation of the shores of the St. Lawrence, would make such tow path very expensive if well and permanently done, as it would necessarily be carried in many places some distance from the shore in order to get hive feet water, and such tow path would probably be very much injured by the ice every year, unless strongly protected by stone.

In either case this tow path on the Canal inland would cost more than the extra width and depth of the Steam Boat Canal for the short distance we are compelled to make it. There would be much less expedition in transportation, and much more risk in every shape.

These considerations have decided in my mind the propriety and advantages of the Steam Boat Canal, of good size, in preference to any other improvement, for cheapness of construction, cheapness and expedition in transportation over any other plan, when adapted to the peculiar localities of the St. Lawrence between Prescott and Montreal.

The sum of two hundred and thirty five thousand seven hundred and eighty two pounds three shillings and three pence, to effect such a work will appear to some small, but I fully believe the whole improvement between these two Lakes for Steam Boats carrying 250 to 300 tons of goods, can be accomplished for this sum.

No. 6.

# MINUTES

OF THE BOARD OF DIRECTORS.

POR 1834.

5th February 1834.

At a Meeting of the Board of Directors at the Parliament Buildings, York,

#### PRESENT:

Wm. Hamilton Merritt, Esq. President. Alex. Y. McDonell, Esq. Vice-President.

Ogden Creighton, William Elliott, and William Chisholm, Esquires.

The first matter submitted for consideration was the appointment of an Agent to the Company.

Ordered, That the Board being fully satisfied with the zeal, industry and ability of Wm. B. Robinson, Esq. the past season, as a Commissioner on the Welland Canal, they have determined on offering him the situation of Agent to the Company, at a salary of £400 per annum, to include contingent expenses for the coming year, if he thinks proper to accept the same.

At a Meeting of the Board held at Perry's House, City of Toronto,

#### PRESENT:

Wm. Hamilton Morritt, Esq. President.

William Chisholm, William Elliott, and Charles Duncombe, Esquires.

Resolved, That no intemperate person will be in future employed on the Locks.

St. Catharines, 2d April, 1834.

PRESENT.

William Hamilton Merritt, Esq., President. Alexander Y. McDonell, Esq. Vice President.

George Keefer,
Ogden Creighton,
Thomas Butler,
William Chisholm, and
Charles Duncombe, Esquires.

The Solicitor of the Company having submitted his opinion in writing relative to the exacting of tells

on vessels and property passing the Cut at Chip-pawa,

Ordered, That some discreet person be placed in charge of Chippawa cut and bridge, and that in future, tolls will be exacted on all property and vessels passing the said cut, agreeable to the regulations—and the Solicitor be instructed to proceed against such person or persons as neglect to refuse or comply with the same.

Ordered, That the toll collectors be notified that no staves or lumber will be allowed to pass the Canal in future but under the printed regulation.

Board met 3d April, 1834.

Resolved, That after the first day of May next, no september start liquor will be allowed to persons employed on the Canal—and persons keeping an inn or grocery will not be employed by the Company.

Ordered, That the Secretary write to Mr. M'Aulay that it is indispensably necessary that he should attend, the law being imperative that all the Arbitrators should be present—and name the 10th of June for a meeting of the same.

A letter from Oliver Phelps, requesting aid to build a bridge across the the Canal, &c., to connect his land, was read.

Ordered, That the Board cannot now comply with Mr. Phelps' request.

May 7, 1834,

At a meeting of the Board at St. Catharines,

#### PRESENT :

W. H. Merritt, Esq. President.

Alex. Y. M'Donell, Esq., Vice-President.

George Keefer, Ogden Creighton, and Charles Duncombe, Esquires.

The President having, in the presence of witnesses, demanded payment of the tolls due on 3000 bushels of wheat delivered 29th April, 1831, the cargo of the Schooner Sterling, passing the cut at Chippawa, and payment of the same having been refused,

Ordered, That the Solicitor be instructed to proceed against the owners in the Court of King's Bench after notifying them of the same.

Ordered, That the President be authorised to let out the Berm Bank near the stop-gate at feeder, by private contract, the same not to exceed 20 cents per yard.

A letter from John Macaulay, Esquire, was/read, excusing himself from attending the arbitration on claims.

It being considered highly important that Mr. M'-Aulay should give his attendance, the Board direct that if it does not suit his convenience to attend on

36

the 10th June next, that he be requested to appoint another day for the meeting of the Arbitrators.

Ordered, That James Black, Esq. be appointed to the Collectorship of Port Colborne on entering into the necessary securities.

At a meeting of the Stockholders of the Welland Canal Company held at the Welland Canal Office in St. Catharines, on Wednesday the 4th day of June, pursuant to public notice, for the election of Directors for the ensuing year-

On counting the votes received by ballot as the law directs, a majority appeared for the following gentlemen, viz.:

William Hamilton Merritt, Esquire, Ogden Creighton, Esquire, Alexander McDonell, Esquire, and Thomas Butler, Esquire.

At a meeting of the Directors, on the same day,

Wm. H. Merritt. Alexr. McDonell, Thomas Butler, and Wm. Ellion, Esquires.

On proceeding to ballot, a majority of votes appeared in favor of Wm. H. Merritt, Esq. for President, and Alexander Y. McDonell, Esq. for Vice President.

5th June, 1834.

The Board met.

#### PRESENT :

William Hamilton Merritt, Esquire, President.

Ogden Creighton, Charles Duncombe. William Elliott, and Wm. Chisholm, Esquires.

Ordered, That the salary of the late Agent be continued from the 6th June to the 13th July of the past year, his time being occupied in settling claims, attending Arbitration, and the affairs of the Company generally, for a much longer period.

Ordered. That the toll for the present year will be remitted on all Boats which may establish a regular line for conveying passengers—they transporting those in the employment of the Company, when on the Company's business, free from charge.

7th June, 1834.

At a meeting of the Board, at St. Catharines,

Wm. Hamilton Merritt, Esquire, President. Alexander Macdonell, Esqr. Vice President. Ogden Creighton, William Elliott, Thos. Butler, Charles Duncombe, and William Chisholm, Esquires.

From the strong feeling which appeared to prevail in the last Session of the Legislature, to have the Welland Canal Company repossess the hydraulic power and property, which they consider to be increasing in value by the outlay of the public money to remove all doubts respecting the sum to be paid to the Hydraulic Company for the water which may hereafter be required for the Branch Canal to the Ningara River, and to remove every impediment to the purchase of the private Stockholders that the entire Canal may be placed under the control of the public. The Directors deemed it advisable to take the subject into confideration at the first meeting of the Board, and appointed a committee consisting of the Directors appointed by the Government, to negotiate with the proprietors in the Hydraulic Company for the purchase of the same. The subject was discussed at the several meetings and a Report was submitted by them and read.

Resolved, That all Leases for Hydraulic property be for 10 years only.

Ordered, That the Secretary be requested to appoint an Assistant, and submit his name for the approval of the Board, and that £100 per annum be allowed for this purpose.

That the wood upon the tract of land belonging to the Company be strictly preserved, and that the publie be cautioned against cutting any part of it, and that all persons in the employ of the Company be required to report any depredations they may discover to have been committed.

Ordered, That Saw Logs be charged at the same rate of toll as in former years.

The copy of a despatch from E. G. Stanley, Esq., Colonial Secretary, addressed to His Excellency Sir John Colborne, Lieutenant Governor, &c. &c., in reply to a memorial of the Stockholders of the 22nd Sentember last, praying for a relinquishment of the debt due by the Welland Company to the Home Government in consideration of the public advantages derived from the construction of the Canal having been transmitted by His Excellency the Lieutenant Governor, by which it appears His Majesty's Colonial Secretary declines recommending the applica-The Board regret the view which Mr. Stanley has taken of the matter, but feel convinced on receiving the strong application made by the Legislature by address the last session, that a more correct view of the subject will be entertained.

4th July, 1834.

At a Meeting of the Board of Directors,-

### PRESENT:

Wm. Hamilton Merritt, Esq. President. Thomas Butler, and Ogden Creighton, Esquires.

It appears from the report of the President that during the past month the Canal has been in excellent order, no detention in the navigation or casualty of any description until the afternoon of the 30th, when two lower lock gates gave way on lock No. 26 when filled, apparently from decay, and took out the lower mitre sills with them, and the upper gates also; on a strict investigation on the spot, there appears no blame or censure can be imputed to the lock tender.

On the same day the upper gates at lock No. 10, were forced open by the Schooner Mississagua Chief, and the two lower ones cast away in consequence. No blame whatever can in this instance attach itself to the locktender, as no precaution on his part would have prevented it, the break having been caused by the vessel not having her line ready to stop her way.

Ordered, That the owners of the Mississagua Chief, be notified that the Company hold them responsible for the damages incurred,—in the mean time the vessel is permitted to pass, and a bill of expenses to be furnished them.

The President has from time to time called the attention of the Board of Directors to the subject of security. By the 34th clause of 4th Geo. IV, c. 17, the Legislature contemplate security should be given by every Treasurer, meaning of course all who should have money passing through their hands. At present no security of the kind exists, which at least forms a dangerous precedent—therefore it is

Ordered, That the Secretary, who is receiving and paying out money, he requested to furnish security to the amount of £500, by two securities, and double the amount in his own name—and that all those who have similar responsibilities be required to present them in this office within the present month, or consider their situations vacant.

With regard to the situation of Mr. Cochrane, at Port Colborne, he reports to the President that assistance is required to make the light. The Company have been paying \$30 per month, heretofore for that duty and the Company not being in a situation to augment these expenditures—

Ordered, That Mr. Cochrane be so informed, and if he prefers taking a situation as lock tender below, he can be changed at the opening—and providing he thinks he can fulfil the duties, and in case he leaves, to give the situation to Ostrum, as recommended in Mr. Black's letter of 30th June.

£33,449 6 3

Amount received from the Receiver

General, on 8th March last, ..... 30,000 0 0

£ 3,449, 6 3

Amounts required to apply as follows:-Port Colborne Harbor,.. £6,000 0 0 Extending piers at Port

Repairs on line of canal, including new lock

gates,..... 2,500 0 0

£16,449 6 3

Ordered, That the Secretary call on Mr. M'Donell, the Agent for the Hydraulic Company, to furnish the Canal Office, with the least possible delay, with all maps, plans, leases, bonds, blank forms, with the prices and terms of sale of lands or leasing of water, or any other matter that may be required to give information relating to the hydraulics and lands lately repurchased by the Welland Canal Company from the Hydraulic Company.

Resolved, That every application for water power or land be made in writing, and to have priority according to dates, and that the plans and surveys of the property be made, and the business to commence forthwith—the present occupants of course to be continued in their property.

In compliance with an order of the Board of the 7th June last, relating to the appointment of an assistant in the Canal office, the Secretary first offered the situation to Mr. P. J. Beaton, (in the Hydraulic Company's service) at £100. Mr. Beaton declining to accept the same unless having his duties defined, and be allowed to bring other works into the office; the Secretary on those conditions could not accept the services of Mr. Beaton unless approved of by the Board, and in the meantime appointed Mr. Raincock to the situation subject to the approval of the Board.

Ordered, That Mr. Raincock be employed on trial till the next meeting of the Board, and if found competent to the duties required, will be appointed to the situation.

A letter from John B. Yates, Esq., of the 10th June having been submitted, requesting a loan of £2,500 to repay certain sums advanced in this country, for which he will pay interest, and return the principal when required.

Ordered, That the same be advanced, and the Directors feel pleasure in having it in their power to return him a favor so frequently received in the various stages of the Canal, and that the same be advanced from the tolls collected.

August 6, 1834.

At a meeting of the Board of Directors.

ومراشية ومداد فالماري المهار فستستهل

### PRESENT.:

William H. Merritt, Esq., President.

Ogden Creighton and
Thomas Butler, Esquires.

Mr. Clark having represented to the Board that, during the present month, he thinks he can, with the aid of his present assistant, post up the books, produce a regular balance sheet of receipts and expenditures, have the hydraulic books open for sale of lands, hydraulic situations, &c. &c., the estimate in due time for the examination of the President, and the business of the office regularly brought up,

Resolved, That the decision of the Board respecting Mr. Ruincock be suspended.

Sept. 13, 1834.

At a meeting of the Board of Directors.

#### PRESENT :

Wm. Hamilton Merritt, Esq. President.
Alexander McDonell, Esq. Vice President. and
Thomas Butler, Esquire.

The President reported the Canal in good order, in which situation it has continued since last meeting of the Board.

The Bonds from the several persons required to produce the same were submitted as follows—Ogden Creighton, Treasurer, himself in £1000, John B. Yates, and James Lockhart in £500 each; John Clark, Secretary, himself in £1000, his sureties George Adams and H. Mittleberger in £500 each.—James Black, Collector, Port Colborne, himself in £500, his sureties Geo. Keefer and Jos. Wenham, £250 each; George Smith, Collector, Port Dalhousie, in £500, sureties Wm. C. Chase and H. Mittleberger, in £250 each; A. S. St. John, Collector, Dannville, in £250—sureties Andrew Thompson and Solomon Miner, in £125 each; John Callaghan, Collector, Port Robinson, in £50, two sureties £25 each, which were severally approved of.

6th November 1834.

At a meeting of the Board of Directors,

### PRESENT :

Wm. H. Merritt, Esq. President.

Charles Duncombe, Thomas Butler, and Wm. Chisholm, Esquires.

The President reports the Canal having continued in good order.

A communication from John McAulay Esq. having been read, which leads the Board to believe that the Commissioners will not meet the present season, and as many claimants as well as the Company, are desirous of having their respective demands brought to a close.

Ordered, That the undermentioned gentlemen be proposed, viz:—

Samuel Street, or
David Thorburn Esquires.
George Keefer, Senior,
John Willson, and
Dr. Duncombe,

Esquires.

To settle all claims that the individuals may agree to.

A Letter from D. Thompson, Esq. claiming a settlement of accounts by the end of the month, was read.

Ordered, That the Secretary inform Mr. Thompson that they have to regret that the Commissioners appointed by the Legislature to decide on all unsettled claims have not found time to meet—that the Board have attempted to name other Arbitrators, but

find they cannot meet the views of individuals, and they are thus compelled to await the interference of the Legislature to appoint new Arbitrators to close all matters connected with the Company which remain unsettled.

No. 7.

# REPORT

OF THE

BOARD OF DIRECTORS.

OF THE

# WELLAND CANAL COMPANY,

FOR THE YEAR 1835.

It was the intention of the Board of Directors to have published monthly statements of the operations of the Canal, during the past season; and with this view they made their first Report on the 21st of May.

The Canal was not opened until the 28th of April, a few days after the arrival of the Winnebago, Capt. D. Howe, the first vessel from Oswego, to whom the Company's premium of £25 currency, was awarded.

On the 1st July their 2nd Report was printed, briefly alluding to the very great diminution in produce for exportation, and that no expectation of an increase would be anticipated through the Canal—The cause is ascribed to the severe frost and snow storm on the 14th May, 1834, which destroyed a great proportion of the crops in the western country.

Their third and last Report was published 1st. Sept. It states that, notwithstanding the expected diminution in Tolls, as held out in last Report, an increase had taken place; and that the advantages of the communication began to be duly appreciated.

Since the last Report the operations of the Canal have continued without interruption with an increase both in quantity and amount.

In presenting this statement, although there is every reason to be well satisfied with the result under existing circumstances, it may not be amiss to recapitulate some of the prominent causes which have led to reduce the amount of toll the present season.

The navigation of the Grand River was expected to be opened as early as the let May, and would have been in successful operation throughout the season; instead of which from the difficulty experienced by contending against the water in sinking the lower Lock pit, the navigation has been literally closed up. The dams were erected; but for want. of Locks no commodities could pass-so that the usual supply of produce and lumber heretofore transported by that channel, was wholly stopped with the exception of 600 barrels of Flour, which were, at much trouble and expense, transported over those dams. Second, the increase in wheat, although exceeding the quantity in 1834, falls far short of the progressive increase which in ordinary seasons might be expected. To show the difference in amount of toll, had the increase of produce equalled the increase of lumber, the following comparison is adduced :-

Average amount of Toll on a downward cargo of Wheat, through the Canal. . £18 0 0 Average amount of Toll on a cargo of 6 0 0

Difference ......£12 0 0

The reverse of this diminution would shew the progressive increase we had a right to expect.

This communication from the commencement has had to contend against the most powerful opposition. The trade of the western country has been for a length of time concentrated in Buffalo; the Mill owners on the entire line of the Eric Canal, west of Syracuse; the Forwarders of all the different lines of freight Boats, and the Ship owners resident in Buffalo and Black Rock—all of whom can command any amount of Capital—have, a direct interest, in diverting the trade through the Eric Canal, and have not been sparing of means, personal exertions and influence, to accomplish that object.

They have taken a sufficient interest in the different Steam Boats and vessels on Lake Erie, to confine their trips to the port of Buffalo; they have extended their different lines through the entire route of the Ohio Canal, to Portsmouth, on the Ohio River, to meet those vessels at Cleveland, on Lake Erie, and their Millers and Forwarding Companies send Agents to make sufficient advances to the different purchasers of wheat to insure its being confined to their particular conveyances or channel. The same influence ticular conveyances or channel. The same influence is extended to the Merchants in New York, who, to retain their business, readily enter into their views, (although in fact, they can have no direct or positive interest in either route,) thus completely controlling the greater part of the transit by means of the facilities they possess in obtaining money, although at a positive loss to the grower and consumer.

It is the want of that capital only which prevents a regular line of vessels from Kingston to Amherst-

burgh.

One Steam Towing Boat between Kingston and Port Dalhousie, on Lake Ontario, and one between Port Colborne and Amherstburgh, with a few Schooners, would effect the object. The day is not far distant when similar lines will be established between Oswego and Port Dalhousie, and Port Colborne and Cleveland, for the New York trade.

We have reason to be satisfied with the prospects offered by our neighbours, from New York, as well as every port or place west of Buffalo in the western States. But one feeling appears to prevail, and that is,—the complete success of this work. The inhabitants all feel that their interests have been promoted: by the opening of this communication, and its practical effects begin to be developed; the lowest price for the transportation of a ton of Goods-

From New York to Cleveland, via Buffalo,

Thus making a saving per hundred of .. \$0 .. 22

Or \$4.40 conts per ton of 2,000 lbs.

The increase of merchandise, for the past season, was nearly three to one, over the preceding year; although a most unjustifiable proceeding was resorted

to in New York to divert the trade, at a period which did not admit of contradiction in time to remove the effect. On the 21st of October the following notice appeared in the New York papers, just at the time the fall shipments were making, which unquestionably caused large quantities to be diverted from Oswego, through the Eric Canal.

"The Commissioners of the Welland Canal contemplate closing the Canal on the 1st November, in order to commence the improving the Canal, and having it in perfect order by the time the Erie Canal opens in the spring.—Goods will not be shipped from Oswego, destined for Lake Erie after the 25th

The experience of the few past years, it is hoped, affords sufficient evidence, that the same motive for similar deception will not exist; as there must be ample business for both channels.

Last spring, goods were delivered in Ohio some days before the lake was clear of ice above Buffalo harbor.—Schooners have performed the trip from Cleveland to Oswego; returned and unloaded, within 10 days; and from Port Dover, on Lake Erie, to Toronto, in three days.

A number of new vessels have been added to this trade, during the last season, all of the largest

size, and first class, exceeding 100 tons.

The increase of Toll in 1834, over the previous year, was about 19 per cent.; and in 1835, over 1834, about 35 per cent. The prospects for the trade of the ensuing season give reasonable hope of a much greater increase.

The Tables in the Appendix to this Report, numbered 1 to 8, have been made out with great care and attention, with a view of placing the actual si-tuation of the trade of the western part of the country fairly before the public.

Nos. 1 & 2 show the transit from one American port to another, both up and down.—No documents can more clearly shew the importance of this trade; and we trust it may be the means of convincing our Montreal Merchants. It is worthy of their attention.

Nos. 3 & 4, the transit from one British Port to another.—Although small in quantity they shew a great increase during the past year. A communica-tion has been commenced, and will be established, with every port between Port Colberne on Lake Eric and Goderich on Lake Huron; which gives a fair promise of a progressive increase in all time to

Nos. 5 & 6, the transit from a British to an American port. This consists principally of lumber, with a very small proportion of wheat and flour.—The trade between the two countries is at present greatly to our disadvantage; but we have every reason to expect a more liberal and enlightened policy will be

Nos. 7 & 8, from an American to a British port, show a greater proportion of wheat than flour, as compared with the shipments from one British port to another.

Those tables will prove more useful hereafter, as a record of the trade between the two countries, and she wing the actual increase of different articles from year to year. It is desirable that future Boards should continue to publish them.

The Table No. 9 gives an abstract of quantity

and amount, and presents an increase over the past year, highly satisfactory to those who have a correct knowledge of the last years crops.

Besides the erection of three Harbors-Port Dal-Maitland and Colborne-An aqueduct for vessels over the River Welland, 365 feet in length, and 24 feet in width—A dam and embank-ment over the Grand River, of nearly one mile in length, with 5 extra Waste Weirs, capable of discharging in all a width of 1,500 feet of water-four stone culverts, only one of which remains -six wooden culverts-three guard or stop gates, with some 40 or 50 Waste Weirs, and 13 of a mile of the deepest cutting in America, with the exception of the Delaware averaging, from 30 to 56 feet.

The following Report from the Engineer, will shew the work now in progress:-

To the President and Board of Directors of the Welland Canal.

GENTLEMEN,

I beg leave to present the following brief statement of work to be prosecuted during the close of the navigation, upon the Welland Canal.

1. Raising the Berm Bank from Broad to Cranberry Creek on the feeder.

Widening and deepening the lower end of the Feeder; removing rock in the cut to Gravelly Bay and widening the Canal below Junction.

3. Widening and deepening the Canal from head of Gravelly Buy to first Guard Gate.

4. Raising towing path from Dunnville to Broad

5. Rebuilding part of Locks No. 7, 16 and 20; Creck. and repair of Locks 18, 25 and 27.

Rebuilding Waste Weirs at Marlatt's, and at

7. Making 4 new Lock Gates at Port Robinson, 2 at Thorold, 2 at Allanburgh, and 4 more upon other parts of the line.

New Guard Gates near Gravelly Bay. Two new road Bridges-one at Berger's and

another at Quakers.

Repair of road Bridge near aqueduct, and planking road way of aqueduct.

All these works are placed under contract, except Nos. 3 and 4, and will be finished by the first of April; as the necessary materials for these repairs and works are now nearly upon the ground. With an ordinary season we may expect to open the navigation by the 4th day of April, at farthest. The estimated expense of the repairs above specified, is \$25,382 16; and of the 3rd and 4th, not yet under contract \$1,800.

Upon a recent examination of the Canal line, the earth work, paths, slopes and embankments, are generally in a good state of repair, and no immediate expenditure under those heads, is to be apprehended.

The late storm in November, has severely tested the works at Port Colborne; but has not injured the solidity of any of the main Piers. The Grand River Pier has suffered to the extent of £62 currency. The extent of damage sustained at both harbors, I have estimated at £212 10s. Port Colborne has been repaired at less expense than my estimate.

The Hurbor at Port Dalhousie, although the Piers are undecked, appears to have given general satisfaction, to all the ship masters with whom I have conversed; the present depth of water is sufficient for all schooners that now navigate the Canal.

During the past season the Welland Canal has been navigated by 103 schooners, mostly of a large class, rating between 60 and 120 tons burthen: they will carry freight to the aggregate extent of 7,290

In closing my remarks for the season, I may sum up the whole by stating that it is only necessary to place the Canal in a perfect and permaneut state of repair, to ensure a trade corresponding with the capacity of the Locks for transit.

I have the honor to be,

Gentlemen, Your very obedient servant, FRANCIS HALL.

St. Catharines, 26th Dec. 1935.

In the Appendix to this Report will be found a a new table of toll, which will go into operation on the opening of the navigation next season.-In the compilation of this table; all parties interested in the trade have been consulted and information obtained from the best sources.

6,345 10 10

#### HYDRAULICK PURCHASE.

Leaving to be provided for, ....£9,832 17 84

\$25,382 16 cents, .....

It is necessary that the proceedings of the Company, relating to this transaction, should be correctly understood; and it is due to the Board, the Stockholders and the Public, to give a detailed narrative of their proceedings in relation to it.—With that view they submit a copy of the statement presented last session, to a committee of the House of Assembly, as follows:

It contains, First—Orders of the Board to notify particularly the Government Directors, that the subject of the Hydraulics will be taken into consideration; and the appointment of a committee to consist of the Government Directors alone, to examine and report on the subject.

Second—The report of that Committee containing the following proceedings, viz: 1. Minutes of meeting, 26th October, 1830, expressing the opinion of the Board respecting the sale of the Hydraulic power and land. 2. Ditto of Nov. 3d, 1830, when the Resolution of the preceding meeting was not confirmed, but the property ordered to be advertised. 3. Copy of the advertisement, 8th december, 1830. 4. Proceedings of meetings of 11th May and 2d June, 1831, confirming sale, and appointing Mr. George Keefer, Jun., to make a survey, and ordering a deed to be made out to Alex. M Donell, Esq.

Third—Opinion of the Committee on the subject.

Fourth—Concurrence of the Board.

Fifth—Copy of the instrument alluded to.

Extract from the Minutes of the Board of Directors of the Welland Canal Company.

May 7, 1834.

PRESENT.

Alexander M'Donell, Vice-President.
George Keefer,
Ogden Greighton,
Charles Duncombe,

Ordered, That a meeting of the Board will be held and gave the Bonds of the Company for £17,500;

on the 1st Monday in June next, when the subject of the Hydraulics will be taken into consideration; and that the Government Directors be particularly requested to attend on that day.

# EXTRACT

TROM

THE MINUTES OF THE BOARD OF DIRECTORS

OF THE

WELLAND CANAL COMPANY.

June 7, 1834.

PRESENT:

Wm. Hamilton Merritt, President.
Alexander McDonell, Vice President.
Ogden Creighton,
William Elliott,

Thomas Butler, Charles Duncombe, William Chisholm. Directors.

From the strong feeling which appeared to prevail in the last session of the legislature, to have the Welland Canal Company repossess the hydraulic power and property, which they consider to be increasing in value, by the outlay of the public money—to remove all doubts respecting the sum to be paid to the Hydraulic Company, for the water which may hereafter be required for the branch Canal to the Niagara river; and to remove every impediment to the purchase of the private Stockholders, that the entire Canal may be placed under the control of the public, the Directors deemed it advisable to take the subject under consideration at the first meeting of the Board, and appointed a Committee, consisting of the Directors appointed by the government, to negotiate with the proprietors in the Hydraulic Company, for the purchase of the same—the subject was discussed at the several meetings, and the following Report submitted:—

[For Report of Committee see Appendix to Remarks, marked No. 3, of this year.]

The Board fully concur in the sentiments of the above Report. However, as the greatest inducement on the part of Mr. Yates, who is the principal proprietor, to dispose of this property is, to meet the views of the public so frequent expressed in the House of Assembly, he suggests the propriety of recording a reservation, to enable the Legislature to replace the property in its present position, if they deem it advisable, at the next Session; and he has executed an instrument, to return the obligations of the Welland Canal Company, placing the property in its present position, and reconvey it to him.

[For Agreement made between the Welland Canal Company and Messrs. Yates, McDonell & Creighton; see Document appended to this year, marked No. 4.]

In accordance with this arrangement, the Board took a re-conveyance of the property from Mr. Yates and gave the Bonds of the Company for £17,500;

and thus the matter stands. The motive for first disposing of this property was to concentrate a large amount of capital on the line of the Canal which would increase its revenue in the shape of toll. A very serious difficulty appeared to exist on account of the title; to remove which, an application was made to the Legislature to incorporate the Company and also to allow one of the principal proprietors to hold and convey real estate, neither of which was granted. A very great anxiety appeared to be manifested by the House of Assembly to re-possess this property; and it was supposed to be the only existing obstacle to making the Canal wholly a public work. It was this reason, together with the desire to possess the entire control of this water, in case it should be required for any other purpose, which induced the Directors appointed by the House of Assembly to re-possess it.

# SUPPLEMENTARY REPORT.

The House of Assembly have the power to appoint three Directors to represent the interest the Provincial Government hold in this undertaking. During the last year Dr. Duncombe of Oxford, David Thorburn, Esqr. of Queenston, and Wm. Lyon Macken-zie, Esq. were selected for that trust. On the 15th of May, those gentlemen took their seats and proceeded with the ordinary affairs of the corporation, as usual; the Board offering every facility, as on all occasions to every Director, to examine the minutes of former proceedings, the Books, papers and all other documents relating to the affairs of the Company. Mr. Mackenzie having examined the entire pany. Mr. Mackenzie having examined the entire line of the Canal was highly gratified with all he saw, and expressed the most carnest desire to promote the best interests of the undertaking, offered to be the bearer of a Memorial to Lower Canada, and to use his best exertions to obtain aid, of the success of which he said, he did not entertain the least doubt. He professed that the investigation in which he was engaged, was with a view of preparing himself to make such a Report as would enable him to effect that object.

On the 21st of October Mr. Mackenzic notified tho President that he had discovered defalcations of the funds of the Company to a large amount. He insisted upon a special meeting of the Board being called which was acceded to; and from the representations then made by him, the Board assented to close up the Office, seal up the Books and papers and leave every thing in abeyance until the period named by him, 19th November; he at the same time promising every exertion on his part to promote the object of the mission he had offered to undertake; and, until the moment of his departure, expressing his entire confidence of success. With what fidelity he has confidence of success. discharged the trust reposed in him by this Company, in the execution of that mission, will be seen from his own statement. The first intimation we had of the change in that gentleman's sentiments, was in the appearance of a paper bearing the title of the "Welland Canal," published by him at Toronto, on the 16th December last, in which we find a series of accusations against the Directors-for, however desirous he may appear to be to cast the odium on the

President, the fact cannot be concealed that the responsibility of the management of this corporation rests wholly with the Board of Directors. Mr. Mackenzie would be justified in publishing the proceedings of a corporation who had confided to him the management of so important a trust, before representing the reasons on which he grounded his opinions, to the body who sent him, or by calling a meeting of the Stockholders generally, (the only parties directly interested, admitting all his assertions were true,) is for the public to determine. But if those charges prove to be false, who will be the sufferers! It is a matter of little consequence to Mr. Mackenzie, who does ot own a farthing of Stock-it is also of little conse mance to the Directors individually, who hold a very small amount of Stockand it may be of little co sequence to any individual within this Province, as the whole amount of Stock held in it does not exceed £3,712 10, but there are individuals, both in Europe and the United States, particularly the latter, who are deeply interestedmen who have advanced large sums, having lain out of their money for many years, and to whom this Province is under deep and lasting obligations, for the benefit they are daily deriving from this communication, who may be ser ously injured.

Although the Directors protest, in the strongest manner, against the abuse of the trust reposed in that individual, they do not feel themselves called upon in justice to their own character, to notice any other matter contained in the publication alluded to, except what relates to, a

# DEFALCATION OF THE FUNDS OF THIS CORPORATION.

The moment this charge was made the most prompt and efficient measures were adopted to obtain a full investigation.—On the 19th November, the day named, the following order was passed, nem. con.

- "Whereas, it has been stated by Mr. Mackenzie, a member of the Board, that the financial affairs of this corporation are in a state of great derangement, and that the books have been improperly, tampered with; and whereas the Board are desirous to have the charges made by Mr. Mackenzie thoroughly and impartially investigated by some competent and disinterested person or persons.
- "It was proposed by Thomas Butler, Esq., and seconded by Ogden Carighton, Esq.,
- "Resolved, That Mr. J. T. BOWREY be authorised to examine and compare the said charges with the said Books on behalf of this Company, together with all receipts and expenditures of all money which may have come into the possession of this corporation, from time to time, up to, the 31st of Oct. inclusive; and that the Secretary, Mr. Clark, be requested to appoint another person to act in conjunction with Mr. Bowrey—and that those two gentlemen do report the result of their examinations to this Board—and that they, shall have full power to examine all persons, books, and papers, in any way connected with the affairs of this corporation.

The result of the investigation is contained in their Report.

In concluding these my remarks on the general management of the Welland Canal from the period of its commencement, I beg to remind the Commitmitee, that at the commencement of this investigation I offered promptly to admit all such allegations as were true, and leave the Committee to judge of their importance or character:—To this Mr. Mackenzie objected, claiming the right to conduct the proceedings in his own way, to which the committee assented. He has occupied the time of the Committee from the 27th January to the 26th of this month, making up, reading over, and explaining his voluminous statements, and examining witnesses.

After closing his case, as he terms it, on Saturday the 26th inst., I again offered the Committee to rest the defence of the Company entirely on their judgment by a brief verbal explanation of the statements he presented, providing only the evidence adduced was to be printed with the report;—this after a consultation was rejected, and I was recommended to give in a written statement in reply, in such manner

or form as I thought proper.

In consequence of which, under the impression the whole was to be laid before the public, I drew up a hasty and brief reply to each accusation; and in order that a plain simple statement should be presented to the public, I have given a brief statement of each year's transaction as it actually occurred, together with the official documents and monthly minutes of the proceedings of the Board, in order that those who may take an interest in the transaction may not prejudge the proceedings of the Directors by misrepresentations and extracts selected to give a semblance of

truth to a particular proceeding, and the very document or extract from the minutes to shew its absurdity suppressed.

My reply to all the voluminous matter presented by the Director of 1835, has only occupied the time of your honorable committee, including the examination of my evidence, 2 hours on Monday the 28th, and 2 hours on Thursday the 31st inst.

As I understand Mr. Mackenzie intends to address your Committee with a view of impressing the importance and utility of his proceedings, to which I am not entitled to reply, I will briefly recapitulate the substance of his accusation.

The first 6 questions relate to the Secretaries, and the manner in which the books have been kept.

When the objection was first made, every director manifested their anxiety to institute an immediate investigation—the only difference of opinion was the motive—he alloging intentional fraud and the abstraction of large sums, the Directors admitting errors, but from the characters of the Secretaries and ample security given did not believe either fraud or defalcation to any amount existed; they adopted the only remedy in their power in guarding the interest of the Company by taking security.

No. 1. Imputing fraud has not been made out by any evidence whatever.

No. 2. That erasures have been made to the disadvantage of the company—the only one referred to by any evidence is the £94 in the lock account of Mr. Oliver Phelps in the year 1830, which is to be

charged to Mr. Black until a satisfactory explanation is given by that gentleman, who does not at present recollect the circumstance. The one in old leger folio 402 of £50—heretofore alluded to being paid Thomas Merritt from toll account in 1833 is satisfactorily explained by the affidavit of Mr. Calaghan who made the entry.

No. 3. That false and erroneous entries have been made—That erroneous entries have been made was never disputed but promptly admitted from the first, but from no improper motive.

No. 4. That there is a great defalcation on the part of the officers of the Company. This is denied, and the investigation already made, and any which may hereafter be made by competent and unprejudiced persons will bear them out.

No. 5. That false accounts have been sworn to and laid before the Legislature. This refers to the balance sheet of 1832, where an item is charged as paid to George Keefer to be expended on Grand River claims, it was correct as taken from the books at the time, but a part of the same money was expended for other purposes, and not for this particular purpose, viz: - Grand River claims as then extended.

No. 6. That important transactions of large amount have been improperly withheld from the Company's This alludes to the toll of 1830, 1831, and 1832, the receipts of which were regularly laid before the Legislature in each year, consequently no attempt was made to conceal the amount received; accounts of expenditure were kept in books expressly opened for the purpose in the office-It is true they were not entered on the leger at the time they should have been-the delay occurred as explained by Mr. Clark in consequence of not having settled all the forwarding accounts, some of which remain open to this day, but from no other motive.

No. 7. That the charges by the officers are improper. The charges referred to were examined by a Committee of the House in 1830, and since that period each succeeding year; and not only ap-proved by the Board of Directors, but by the different Committees appointed for that purpose, and incurred as early as 1825, when the Province had no pecuniary interest in the undertaking.

No. 8. That the officers of late years have taken their own salaries out of the funds without authority of the Board. By reference to the books of account it will be seen that the Company had not means to pay the officers, who were generally in arrear-that when a general order to pay a given sum per year is made it is carried to their credit as a matter of course, and no particular order for that purpose is necessary; it could have happened only in a few instances at most, and is of no consequence whatever; the same result would take place by paying them by one order, stating the amount of salary they were to be paid, or swelling up the minute book by entering an order every month.

No. 9. That persons have had access to the books and altered them at their pleasure, and made entries contrary to the standing orders of the Board-This charge is not supported. No person has had access to the books without the permission of the Secretary, and no entries have been made contrary to the standing order of the Board.

No. 10. That loans have been made to Directors, Officers, and others, without the consent of the Board. This is true on two or three cases as stated by Mr. Clark, but every farthing was returned, and the interest gained by the Company for the period.

No. 11, That one set of books of account are kept by the officers, and another for the inspection of the Board—This is true, but the inference drawn from it incorrect.—The one set of books kept with contractors is to enter the different items or payments made at different periods, advances, assumption for debts, and cross entries, necessary to keep on the work when without means; the other is the principal books of account, shewing amounts paid on the estimates.

No. 12. Alludes to myself and Mr. Clark, having been appointed Secretary and not making entries, although it was our prescribed duty-The order appointing myself Secretary in 1832, shews clearly it was merely altering the name from Agent, the duty of which I performed, and Mr. Clark that of Accountant, who gave security for the money at the timethis charge relating to myself disproved by my own evidence as well as the minutes, which clearly relates the transaction.

No. 13. That a system of favoritism has prevailed The current testimony he has produced disproves

No. 14. The evidence he has adduced on this charge is expunged by order of your Committee.

No. 15. This charge has been so often before the public and different committees since 1825, that it is hardly necessary to revert to it again at this remote period, eleven years after the occurrence took place -it only shews the want of any real offence to bear him out in his accusation against me personally.

No. 16. That valuable mill sites have been given away—This is true in one solitary instance,—to Mr. Keefer in 1825-a matter of public notoriety since that period, and which was before the public became interested in the Canal.

No. 17. That the President, Agent, and some of the Directors, have been improperly employed in forwarding goods and leasing water power. If taking a share in two or three vessels constitutes a forwarder of goods, this charge is true, but not otherwise. From the extreme want of capital some of the Directors took shares to promote building of vessels by concentrating the small means individuals possessed on the line of the Canal.

No. 18. That a bargain has been made, injurious the interests of the Company and Province. This to the interests of the Company and Province. relates to the sale of water power to the Hydraulic Company in 1831, and the repurchase in 1834. This transaction is clearly detailed in the Company's last Report. The purchasers would be very happy to be reinstated in possession of this property, consequently neither the Directors, nor any person concerned, can be subject to improper motives in relation to the transaction.

No. 19. That George Keefer, Esq., was improperly connected in the contract for the locks. If the furnishing timber to a contractor at a given price for building a lock when that contractor is paid a given price for each lock, is more improper than selling him a quantity of iron, plank, or other mate-

rials, which compose the same be improper, Mr. Keefer is subject to the imputation, but not otherwise.

No. 20. That important original estimates, contracts, &c., are missing at the canal office—This is true in part, as relates to two estimates, but no injury arises from it, as the copy and Books will shew. The circumstance is explained by Mr. Keefer. It is not extraordinary that papers may be missing during a period of thirteen years, particularly when the officers had good reason to suppose everything, up to 1830 at least, was fully settled.

No. 21. With respect to this charge, as Mr. Robinson has been prevented from satisfactorily settling those accounts by Mr. Mackenzie refusing or neglecting to furnish the Report in time, as promised, an opportunity will doubtless be afforded him by the committee to do so.

No. 22. That the Board has frequently entered into contracts it was without the means of paying, and agreed to issue money it could not possibly re-With respect to the first charge, it is quite true they have at different times entered into contracts of large amount without the means of payment in hand-at the close of every Fall almost since the work commenced, the Company were without funds. Their only alternative was to let out the work, to get it finished, and open the navigation on credit, and depend on their future exertion to obtain meansor stop its progress. Such was the confidence reposed in the Directors at that period that they had no difficulty in letting out the work. The contractors trusted in their zeal and sincerity to use the best exertion to obtain means, which they believed would be successful. Instance the large contract with Donaldson and Davis, in the Full of 1829, from Marshville to Broad Creek, and in 1832, at Gravelly Bay and it is questionable had not the Directors adopted that plan, if a Canal would have been in existence at the present day. It is also true that the same motive led the Directors last Fall for the same object, repairing the Locks, unanimously to agree to issue their Bonds or Notes payable in one year. proceeding was incorrect they are answerable, not otherwise.

No. 23. That the Canal Directors and officers have mixed up politics and tampered with the public press. This is equally absurd and unfounded—its proof is a private letter written by Mr. Dalton and two or three other individuals to Mr. Merritt, which the Director of 1835 obtained extracts from in a manner which he considers creditable, but in no instance has any interference on their part been shewn—on the contrary it is a subject never entered or acted upon on any occasion without my knowledge. On the contrary the feeling entertained by the Directors and myself was always with those who were in favor of the work, within reference to party; many instances could be adduced to prove it—all the frontier, Tory or Reformer, was against it, almost to a man, and those in the interior, the reverse.

No. 24. That the majority of the Shareholders appointed the Directors, is also true—and that in one instance the President, the Hon. J. H. Dunn, was appointed President on motion, instead of ballot, when the Directors were unanimously in his favor.

No. 25. That the Canal has been taken to partic-

ular places to serve interested individuals. This charge has not been supported by a single proof, but on the contrary even the opposition of Mr. Gordon at the time was withdrawn, as shown by his testimony—before a Committee of the House of Assembly, of the Session of 1825 and 1326. [See evidence to Report of Committee of House of Assembly appended to my remarks on Canal of 1825, marked No. 4.]

No. 26. That the payment for a Steam Dredge was made under suspicious circumstances. This is also a surmise, unsupported by proof. Mr. Yates received the money from us, and paid Lynds, the maker of the Engine, in place of the individual himself.

No. 27. That \$10,000 was loaned Mr. Yates while many creditors remained unpaid. This is incorrect, as will be seen by reference to Books. The Company had money on hand when the Loan was made. It is repaid with interest, the amount of which was gained by the Company.

No. 28. That \$30,000 of debt due by Oliver Phelps was improperly placed to profit and loss, and in releasing him the Company forgot the interests of the Canal and the country. This arose from charging Oliver Phelps the entire amount of money he received on his Deep Cut contract, and crediting him for the number of yards excavated at 27 cents per yard. After the work was done, and a computation made by their Engineer, it appeared from his opinion that Mr. Phelps was not paid in the same proportion of other contractors who had commenced the work. The subject was delayed for some time, but his security was relinquished with the unanimous consent of every Director. If the sum of 34 cents per yard is too high for the work he finished, then they have paid too much, but not otherwise.

No. 29. That proper precautions were not taken. This has not been proved, but on the contrary the general evidence, particularly that of Mr. Trotter, shews there was a well dug at north end some feet below the level—but such is the gentlemans zeal for making accusations, that every casualty is turned into a subject of reproach.

No. 30. With respect to this charge—That the books and papers were taken out of my hands—is intended to imply that they were in my possession, which is not the case—they were in possession of the Secretary, and him only. The order of the Board will shew that every caution was pursued, and an investigation made, the result of which is corroborate by the one which has taken place under the direction of the committee, and no good or sound reason ever existed for suspicion of the integrity of the officers.

I have not attempted to impress on the consideration of the Committee the arduous and complicated duty the officers of this Company have had to perform; or out of the many thousand people with whom their transactions have necessarily extended, although frequently cramped for means, how few have ever complained. Much might be said on this head respecting management, but they forbear any further remarks;—they ask no favor, they only require Justice.

If however the Committee consider the Directors or myself—who in truth is the only person designed to be implicated, and the only one deserving censure.

for bad management—all the favor I ask at their hands is that the shareholders who had no participation in the management may not be ruined by further procrastination, and as all parties agree in the opinion that the work cannot be well conducted on the present system, that they will adopt some prompt and decided measure, either to purchase out the shareholders or place the entire responsibility of the work on them.

I have the honor to be,

Gentlemen,

Your obedient servant,

WILLIAM HAMILTON MERRITT,

President of the Welland Canal Company.

COMMITTEE ROOM, H. of A., Toronto, 31st March, 1836.

Mr. Merritt closed his vindication of the character of the officers and managers of the Welland Canal Company, against the charges brought against them by Mr. Mackenzie, and retired.

The Committee then adjourned.

FRIDAY, Sth April, 1836.

Committee met.

PRESENT—James E. Small, Esq., Chairman. Messrs.—Chisholm,

Gibson,
McDonell,
Parke,
Roblin,
Shaver, and
Thorburn—8.

ALEXANDER Y. McDonell, Esq., Vice President of the Welland Canal Company, called in & examined. (By Committee.)

822. In what relative situation do you stand with regard to the Welland Canal Company or any of its officers?—I am a Director of the work and a partner of Ogden Creighton another Director, in other business, and interested one sixth with Mr. Merritt in a mill at Gravelly Bay.

S23. Are you the agent of John B. Yates, Esq., and if so did you give him any undertaking in writing that you would hold the water privileges and lands of the Welland Canal Company conveyed to you by deed bearing date the —— day of —— 18—, in trust for him to his use and subject to his order?—I hold the property of the Hydraulic Company, I have executed a trust shewing the nature of our arrangements as partners: the partnership consists of Messrs. J. B. Yates, Ogden Creighton, and myself. I will also add that I have made a bill providing for the continuance of the trust. The original instrument is in the hands of Mr. Yates.

824. What portion of the £25,000 to be paid by you for the Hydraulics and lands of the Company mentioned in the above described deed has been paid to the Company; and what amount of interest upon the said sum of £25,000 has been paid since

the execution of the deed !-No part of the £25-000 named as purchase money to be spaid by the Hydraulic Company to the Welland Canal Company was ever made, and was not from the terms of the sale contemplated—the interest was paid regularly except that allowed by commuting for the loss of water which was extended generally through the line to leaseholders, the amount can be seen by reference to the company's books. To make this purchase available a large outlay had to be made; no confidence existed on the part of strangers in the work, and few could be induced to risk capital on what they supposed such a precarious issue; the lands were chiefly waste, and to reduce them to cultivation large and extensive drains had to be made; this, together with roads, raceways, and Mills at Marshville, formed a large proportion of the expense on those lands. Mr. Yates held always the control, and never would suffer long leases to be given of water, remarking that it should not be his fault if any impediment was offered to a compromise with the Legislature and the private stockholders. circumstances are barely mentioned to shew the relative understanding on these matters.

The Hydraulic Company was formed in 1831, after the purchase of all the lands and surplus water of the Welland Canal Company.

The sale arose from an objection on the part of Mr. Yates to make the water power an object of no other moment than that of an increase revenue by the operation of machinery. Mr. Yates stated that they were worth a large sum of money, and if they were parted with they should be sold after being advertised for one year in all the newspapers of note on this continent. Accordingly when the day of sale arrived, the highest offer made was thirty thousand dollars, when seventy thousand more was offered in addition by Mr. Yates;—the property sold to him agreeably to the terms advertised. The prevalent opinion then was that the purchase money to be paid was far beyond its value ;-no comment was made until the lateral canal to Niagara was brought before the House of Assembly, when from the debates an apprehension that an interference with these rights so transferred was contemplated by the then member from the town of Niagara. The object of the mover was frustrated, and confidence restored. Some time afterwards an opinion was expressed by many gentlemen that they thought the sale objectionable in point of expediency, when the offer of an immediate transfer was made. On the repayment of the outlay this was not taken advantage of. The year following similar remarks were made on which it was referred to the Government Directors; when the situation of affairs was placed in their present situation this contract as intimated was never screened from public view,—so far to the contrary the purchasers applied to the Legislature for an act of incorporation, and every means that could be adopted were resorted to to give publicity to their purchase, and no pains spared to bring it into notice. A specdy return might have confidently been expected had not Mr. Yates, who held the controling power, obliged the leases and contracts to be made in such a manner so as not to impede any negotiation then spoken of between the Government and the stockholders.

paid to the Company; and what amount of interest 825. When did the resale to the Company of a upon the said sum of £25,000 has been paid since portion of the property so conveyed to you take

**K**6

place? What were the terms of the bargain?—Was it made with the knowledge and consent of Mr. Yates?—What amount of interest has been paid you upon the contract?—and what portion of the canal and water privileges are retained by you?—Describe the same particularly, and the present value thereof.—By reference to the Report of the Government Directors those facts will be ascertained—the property retained is 50 acres at Allanburgh, with the water power of that place, and 140 acres at Port Colborne. The water power at Allanburgh should be worth £100 a year. I last year purchased 50 acres in the heart of the place for £10 per acre. The extensive machinery erected here has made land valuable; I have generally sold at £25 quarter acres the first choice.—On Gravelly Bay purchase 18 months' interest has been paid.

826. Can you give any information upon the subject of the mortgage of Oliver Phelps being given up to him, the value of the land taken by the Company from him—and why upon this arrangement his accounts with the Company were not balanced?—Mr. Phelps' mortgage was surrendered to him on his giving a deed of 50 acres of land in Centreville, which place it was then supposed would be the point of intersection for the Niagara side cut and then thought valuable;—the present valuation I should think £10 per acre.

827. Where is the minute of the Board agreeing to give up to Oliver Phelps the debt he owed on the Company's Books in consideration of fifty acres of land?—I cannot say, the minutes not being in my possession.

[Witness withdrew.]

DAVID THOMPSON, Esq., (of Wainfleet,) called in and cxamined.

#### By Mr. MACKENZIE.

828. Did you ever ascertain how it was that Mr. Phelps contrived to get his partners in the locks contract out of his way, so that he got the deep cut job to himself, with the money of the province to complete it?—I know nothing as to that, only by report.

829. Did Mr. Oliver Phelps complete his deep cut contracts? Did he bottom the sections he had to excavate?—He did not fully bottom the job, a considerable quantity of earth remained on the sides, which he had prepared scows to take away, but the slips took place and prevented it.

830. Had the Engineer on the Deep Cut the power as well as the disposition to check and prevent Mr. Phelps from obtaining estimates and payment for work he never performed? Or what was the usage?—I presume the Engineer was instructed to give true estimates, but notwithstanding from the irregular state of the work and taking monthly estimates, they were often incorrect. It is extremely difficult to estimate work correctly unless it is kept in regular order. I know that the previous estimate of 1828, so far as respects 10 chains taken by myself is incorrect—I refer to a statement I gave the Company. I consider Mr. Phelps at the onset of the work, by getting large advances, placed the Company completely in his power, and continued them so. If the statement produced by Mr. Phelps, to

this committee in answer to question 271 is meant to shew an account of property sold during the progress of the work, it is incorrect. I paid him much higher prices than it exhibits, for oxen and carts-I consider also his statement shewing that the work at the deep cut done by him cost less than that by other contrac-tors, also incorrect. He was made large allowances for roads, wintering of cattle, building of machines, purchasing of shanties, &c., which was not allowed to me as a contractor, nor do I think to others. shewing the statement of the average cost per yard I understand him as taking into consideration the large portion taken out the previous year on the whole length of the deep cut and near the surface. If Iam correct in my understanding of the statement, he received much more according to the depth of cut-ting than other contractors. I am not aware of any ting than other contractors. hard pan being in this work, yet there was stone. He injured other contractors by increasing the wages and the allowance of spirituous liquor, and often giving brandy, and others had to follow this example or they could not keep their men-and all this it appears was done with the Company's moncy-I do not consider that he managed the work economically. I believe he sold the remainder of his cattle in the fall of 1828, after the slips took place.

In the fore part of 1828, I was led into a job of 10 chains, to be paid the same as Mr. Phelps got; as yet I have not been allowed any of the extras given to him-not yet for many yards taken out for the first two or three months. I carried on this job as all others with my own means. pany owed me in January 1829, over £3,000, the greater part of which remains unpaid. The Company's proceedings were so very partial in settling for the Deep Cut work I subsequently brought a suit against them for the balance due thereon and Notes of hand; they came into Court with the late Attorney General, Mr. Boulton, and then took advantage of some informality on the part of my attorney, and nonsuited me. Since that time there have been several agreements to refer to arbitration; the same account yet remains unsettled. From a statement in a note from the Secretary Black that no advances were made to Contractors on the Deep Cut-I was induced to make large loans to the late Mr. Hartwell in money to be paid out of his estimates to enable him to carry on the work, presuming from that statement that he could not be indebted to the Company, a large part of which is still owing to me, amounting to about £400-that at his death the Surrogate placed the estate in my care until it could be administered on, and I was induced by the Company to carry the job on in trust for some time, and then to purchase a large number of oxen, carts, &c., under a verbal agreement, to be paid for its completion that retained by the Company, which was represented to be a large amount. That not long after this arrangement I learned that they had taken a considerable sum from the reserve to liquidate a debt due by the late Mr. Hartwell to the Company, and which until then had been kept from me. The consequence was that the job could not be completed for the balance. I then tendered all the property and the job to the W. C. Co., who declined accepting it, and induced me to persevere, which I did until the work was abandoned, charging them with the cost thereof; the consequence is, a considerable balance remains unpaid and forms a part of the item of debt due me already alluded to:

S31. The Engineer, Mr. George Keefer, tells that you got  $31_{30}^{34}$  cents per cubic yard, for your Deep Cat. Centract. Is this the fact, and what measurement did you get? I have no means here to ascertain, whether I was allowed  $31_{30}^{34}$  cents per cubic yard or not; it may be perfectly correct so far as it goes, but I do here distinctly declare that I took out in the first 2 or three months, many yards that were never estimated, exclusive of roads;—I beg to refer to the statement furnished the Company already alluded to.

832. It appears that when Phelps was a contractor on the Deep Cut he was paid £1200 as an allowance for roads. Did the Directors allow you and the other Contractors a proportionate sum for making roads? The Directors did not allow me any compensation for shanties, machines, roads, nor yet a drawback of duties. I do not know that they allowed other Contractors.

833. Did the piles of earth Phelps placed on the margin of the Deep Cut banks accelerate the slides? This question I consider as a matter of opinion, and mine is that it would have slipped had that not been the case, being founded on quicksand, but probably not quite as soon.

834. What is your opinion of the workmanship of Mr. Oliver Phelps' 34 Locks?—I do not profess to give a correct opinion, but from some giving way much sooner than the others, I presume it was owing to the workmanship.

835. Do you know that Mr. Phelps is a poor man from whom a debt of £7,500 could not be collected? I consider Mr. Phelps a wealthy man worth much more money—yet I beg to add that the most economical man in the Province could not have done the Deep Cut at his original contract price: this I give from actual experience, and under the most favorable circumstances as to means. I well understand labour.

836. Two large contracts—one for the berm bank to Thomas Merritt's Jr., and the other to John Donaldson, were contracted for two winters ago. Was there a fair attempt to induce competition, or did you perceive a disposition to favouritism and letting without advertising?—I was not aware of the letting of this work until after it was given to them.

837. What was Mr. Black's practice with regard to receipts? Did he take 1st one receipt or voucher and then another for the same sum of money, or only one?—Mr. Black so far as I recollect, did take receipts on payment of money, he has in some instances taken receipts for payments on granting due bills, and again on payment of said due bills, but in the accounts current rendered to me, so far as payment of money goes, all appeared correct or was made so on reference.

838. £1340 7s. was paid by the Canal Company for upwards of 200,000 square feet of timber for a Tunnel, no part of which appears to have been used for that purpose. No part of the receipts from the sale of that timber is entered on the Company's Books, and those of the officers who have been examined declare their inability to account for any part of it. Are you aware what has become of it? Some

part of this timber was worked into the towing paths on River Welland; a good portion used up by Mr. Phelps: 5,000 feet of the small timber was put into the Allanburgh Locks.

### (By Committee.)

839. How was it that Oliver Phelps succeeded in getting such good measurements in excavating the Deep Cut?—I refer to a former answer on this subject.

S40. Have you been a contractor for making Berm Banks on the Welland Canal; and if so what was the rate of the contract price per yard?—I was a contractor and the rates per yard of any contract price was 13 cents.

841. Would you have taken any more contracts of this kind at the same rate per yard had any such been offered to let?—I would.

842. Do you know the nature of the soil and size of the Berm Bank now under contract by Mr. T. Merritt between Broad Creek and Dunnville, and if so will you state to this committee if you would have taken that work at the same rate as the jobs you were a contractor for ?—I know the nature of the soil is of a looming nature, easily dug—It would be a better job at the same rate.

843. How many yards did you excavate or remove from your work?—I have no means here to enable me to answer that question.

# [Witness withdrew.]

The Chairman was requested to prepare the draft of a report to the House founded upon the evidence taken before this Committee.

The Committee adjourned till 10 o'clock A. M. on to-morrow.

SATURDAY, 9th APRIL, 1036.

Committee met pursuant to adjournment.

#### PRESENT:

James Edward Small, Esquire, Chairman. Messrs.—Chisholm,

Gibson, McDonell, Parke, Roblin, Shaver, Sol. General, Thorburn—9

The Chairman presented the draft of a report, which he had prepared agreeably to the order of yesterday—which report was adopted, signed by the Chairman and several members of the Committee, and ordered to be presented to the House forthwith.

The Committee then adjourned.

JAMES E. SMALL, Chairman.

ALFRED PATRICK, Clerk.

An a man /		

WHEREAS divers persons have united in partnership within this Province, under different names and styles, to carry on the business of Banking; and whereas it is desirable to afford to the said persons so united in partnership as aforesaid, or who may hereafter unite in partnership for the purpose aforesaid, every facility and advantage to carry on the said business, by enabling every such copartnership to recover and sue for any debts, demands, or claims due to the said copartnership, without being compelled to use the names of all the Partners:

Be it, &c. That it shall be incumbent upon any such persons now united in partnership to carry on the business of Banking within this Province, or any person who may, after the passing of this Act, unite in partnership for the purposes aforesaid, and they are hereby required to make out an account and return according to the form in the Schedule marked A, to this Act annexed, wherein shall be set forth the true names of such intended or existing copartnership, and also the names and places of abode of all the parties concerned or engaged in such copartnership as the same shall respectively appear in the books of such copartnership, and also the names and places of abode of two or more persons being members of such copartnership, and being resident in this Province, who shall have been appointed public officers of such copartnership, together with the title of office or other description of every such public officer respectively, in the name of any one of whom such copartnership shall sue and be sued as hereinafter provided, and also the amount of the capital stock of the said copartnership; and every such account or return shall be delivered to the Secretary and Registrar of the Province, who shall cause the same to be filed and kept in his office, and any entry and registry thereof to be made in a book or books to be there kept for that purpose, and which book or books any person or persons shall from time to time have liberty to search and inspect on payment of the sum of every search.

And be it, &c. That such account or return shall be made out by the manager or cashier of every said copartnership, and shall be verified by the oath of every such cashier or manager, taken before any Justice of the Peace, and which oath any Justice of the Peace is hereby authorised and empowered to administer, and that such account or return shall, between the first day of and the day of in every year after the passing of this Act, or after such copartnership shall be formed, be in like manner delivered by such manager or cashier to the said secretary and registrar of the Province, to be filed

and kept in the manner and for the purpose herein-before mentioned

And be it, &c. That a copy of every such account or return so filed or kept and registered in the office of the said secretary and registrar of the Province as is by this act directed, and which copy shall be certified to be a true copy under the hand of the secretary and registrar of the Province for the time being, upon proof made that such certificate has been signed with the hand writing of the person making the same, and whom it shall not be necessary to prove to be the secretary and registrar of the Province, shall in all proceedings, civil or criminal, and in all cases whatever, be received in evidence as proof of the appointment and authority of the public officers named in such account or return, and also of the fact that all persons named therein as members of such co-partnership were members thereof at the date of such account or return.

And be it, &c. That the secretary and registrar of the Province for the time being shall, and he is hereby required, upon application made to him by any, person or persons requiring a copy, certified according to this act, of any such account or return as aforesaid, in order that the same may be produced in evidence or for any other, purpose, to deliver to the person or persons so applying for the same such certified copy, he, she, or they, paying for the same the sum of

and no more.

Provided also, and be it, &c. That the manager or cashier of every such co-partnership shall, and he is hereby required, from time to time, as often as occasion shall render it necessary, to make out upon oath in manner hereinbefore

directed, and cause to be delivered to the secretary and registrar of the Province for the time being a further account or return, according to the form in the schedule marked B, to this act annexed, of the name or names of any person or persons who shall have been nominated or appointed a new or additional public officer or public officers of such co-partnership, and also of the name or names of any person or persons who shall have ceased to be members of such co-partnership, and also of the name or names of any person or persons who shall have become a member or members of such copartnership, either in addition to or in the place or stead of any former member or members thereof, also stating whether the said capital stock has been reduced or increased, and the amount thereof; and such further accounts or returns shall from time to time be filed and kept and entered and registered in the office of the secretary and registrar of the Province for the time being, in like manner as is hereinbefore directed to be made.

And be it, &c. That if any such copartnership shall neglect or omit to cause such account or return to be made and renewed yearly and every year, between the days and times hereinbefore appointed for that purpose, such copartnership so offending shall for such and every week they shall so neglect to inake such account and returns forfeit the sum of £500; and if any manager, cashier, or other officer of such copartnership shall make out or sign a false account or return or any account or return which shall not truly set forth all the several particulars by this Act required to be contained or inserted in such account or return, the copartnership to which such manager, cashier, or other officer offending shall belong, shall, for every such offence, forfeit the sum of five hundred pounds, and the said manager, cashier, or other officer so offending, shall also, for every such offence, forfeit the sum of one hundred pounds; and if any such manager, cashier, or other officer making out or signing any such account or return as aforesaid, shall, knowingly and wilfully, make a false oath of or concerning any of the matters to be therein specified and set forth, every such manager, cashier, or other officer so offending, and being thereof lawfully convicted, shall be subject and liable to such pains and penalties as, by any law now in force, persons convicted of wilful and corrupt perjury are subject and liable to.

And be it, &c. That all actions and suits against any person or persons who may be at any time indebted to any such copartnership carrying on business under the provisions of this Act, and all the proceedings at law or in equity to be commenced or instituted for or on behalf of any such corpartnership against any persons or persons, bodies politic or corporate, or others, whether members of such copartnership or otherwise, for recovering any debts or enforcing any claims and demands due to such copartnership or for any other matter relating to the concerns of such copartnership.—shall and lawfully may, from and after the passing of this Act, be commenced or instituted and prosecuted in the name of any one of the public officers nominated as aforesaid for the time being of such copartnership, as the nominal plaintiff for and on behalf of such copartnership; and that all actions or suits, and proceedings at law or in equity, to be commenced or instituted by any person or persons, bodies politic or corporate, or others, whether members of such copartnership or otherwise, against such copartnership,—shall and lawfully may be commenced, instituted and prosecuted against any one or more of the public officers nominated as aforesaid for the time being of such copartnership as the nominal defendant for and on behalf of such copartnership; and that all indictments, informations, and prosecutions, by or on behalf of such copartnership, for any stealing or embezzlement of any money, goods, effects, bills, notes, securities, or other property of or belonging to such copartnership, or for any fraud, forgery, crime or offence committed against or with intent to injure or defraud such copartnership,—shall and lawfully may be had, preferred, and carried on in the name of one of the public officers nominated as aforesaid for the time being of such copartnership; and that,—in all indictments and informations to be had or preferred by or on behalf of such copartnership against any person or persons whomsoever, notwithstanding such person or persons may happen to be a member or members of such copartnership, it shall be lawful and sufficient to state the money, goods, effects, bills, notes, securities, or other property of such copartnership to be the money, goods, effects, bills, notes, se-

curities, or other property of any one of the public officers nominated as aforesaid for the time being of such copartnership; and that any forgery, fraud, crime, or other offence committed against or with intent to injure or defraud any such copartnership, shall and lawfully may, in such indictment or indictments, notwithstanding as aforesaid, be laid or stated to have been committed against or with intent to injure or defraud any one of the public officers nominated as aforesaid for the time being of such copartnership, and any offender or offenders may thereupon be lawfully convicted for any such forgery, fraud, crime, or offence, and that in all other allegations, indictments, informations, or other proceedings of any kind whatsoever, in which it otherwise might or would have been necessary to state the names of the persons composing such copartnership, it shall and may be lawful and sufficient to state the name of any one of the public officers nominated as aforesaid for the time being by such copartnership; and the death, resignation, removal, or any act of such public officer shall not abate or prejudice any such action, suit, indictment, prosecution, information, or other proceedings commenced against or by or on behalf of such copartnership, but the same may be continued, prosecuted, and carried on in the name of any other of the public officers of such copartnership for the time being.

And be it, &c. That no person or persons, or body or bodies politic or corporate, having, or claiming to have, any demand upon or against any such copartnership, shall bring more than one action or suit in case the merits shall have been tried in such action or suit in respect of such demand, and the proceedings in any action or suit by or against any one of the public officers nominated as aforesaid for the time being of any such copartnership may be pleaded in bar of any other action or actions, suit or suits, for the same demand, by or against any

other of the public officers of such copartnership.

And be it, &c. That all and every judgment and judgments, decree or decrees, which shall at any time after the passing of this Act be had or recovered or entered up as aforesaid in any action, suit, or proceedings in law or equity against any public officer of such copartnership, shall have the like effect and operation upon and against the property of such copartnership, and upon and against the property of every such member thereof as aforesaid, as if such judgment or judgments had been recovered or obtained against such copartnership; and that the bankruptcy, insolvency, or stopping payment of any such public officer for the time being of such copartnership in his individual character or capacity, shall not be, nor be construed to be, the bankruptcy, insolvency, or stopping payment of such copartnership; and that such copartnership and every member thereof, and the capital stock and effects of such copartnership and the effects of every member of such copartnership, shall in all cases, notwithstanding the bankruptcy, insolvency, or stopping payment of any such public officer, be attached and attachable, and be in all respects liable to the lawful claims and demands of the creditor and creditors of such copartnership, of any member or members thereof, as if no such bankruptcy, insolvency, or stopping payment of such public officer of such copartnership had happened or taken place.

And be it, &c. That execution upon any judgment in any action obtained against any public officer for the time being of any such copartnership carrying on the business of banking under the provisions of this Act, whether as plaintiff or defendant, may be issued against any member or members for the time being

of such copartnership.

Provided always, and be it, &c. That every such public officer in whose name any such suit or action shall have been commenced, prosecuted or defended, and every person or persons against whom execution upon any judgment obtained or entered up as aforesaid in any such action shall be issued as aforesaid, shall always be reimbursed and fully indemnified for all loss, damages, costs and charges without deduction which any such officer or person may have incurred by reason of such execution, out of the funds of such copartnership, or in failure thereof by contribution from the then members of such copartnership who were members thereof at the time the said loss, damages, costs and charges accrued to

And be it, &c. That it shall not be lawful after the passing of this Act for any such copartnership, or for any copartner, or for any person or persons whatever carrying on the business of banking in this Province, to issue any note or

bill under the value of five shillings of lawful money of the Province of Upper Canada, or to issue any note or bill (except drafts and bills of exchange) payable otherwise than on demand within this Province; and in case any such copartnership, or any copartner, or any person or persons carrying on the business of banking within this Province as aforesaid, shall issue any bill or note under the value of five shillings of lawful money aforesaid, or shall issue any bill or note (except drafts and bills of exchange,) payable otherwise than on demand within this Province, every such copartnership or copartner, or any such person or persons carrying on the business of banking as aforesaid so offending shall for every such offence forfeit the sum of twenty-five pounds.

And be it, &c. That all pecuniary penalties and forfeitures imposed by this Act shall and may be sued for and recovered in any Court of Record having jurisdiction in this Province, and that no suit shall be commenced for the recovery of any penalty or forfeiture under this Act, except in the name of the secretary and registrar of the Province for the time being, or of His Majesty's Attorney General

of the Province for the time being.

## BILL

To establish a Post Office in this Province, and to provide for the future management of the same.

WHEREAS it is expedient and necessary to establish a Post Office in this Province and to provide for the future manages ment of the same, and for the payment of the Postage of Letters, Newspapers, Pamphlets and Packets by Post, in this Province :- Be it therefore enacted by the King's Most Excellent Majesty, by and with the advice and consent of the Legislative Council and Assembly of the Province of Lower Canada, constituted and assembled by virtue of and under the authority of an Act passed in the Parliament of Great Britain, intituled, "An Act to repeal certain parts of an " Act passed in the fourteenth year of His Majesty's reign, intituled, "An Act for making more effectual provision for the Government of the Pro-vince of Quebec, in North America," and to make further provision for " the Government of the said Province;" And it is hereby enacted by the authority of the same, that from and after the first day of May, one thousand eight hundred and thirty-six, this Act shall be in full force and effect, with regard to the establishment and management of the post-office, and to the postage of letters, newspapers, pamphlets, and packets by post.

II. And be it further enacted by the authority aforesaid, that from and after the passing of this Act, there shall be a general post-office in the city of Quebec, which shall be under the direction of a Post-master General, (to be appointed as hereinafter provided;) to and from which shall be sent, received and forwarded letters and packets to, or from places within or without the limits of this Province.

III. And be it is the enacted by the authority aforesaid, that it shall be lawful for the Governor, or person administering the government of this Province, by an instrument under his hand and seal of office to appoint as Post-master General a person who shall to him appear fit and proper to fill the said office, and also at any time to remove him, and to appoint another in his place, in case of his death, resignation or removal, or of any vacancy in the said office from any cause whatsoever.

IV. And be it further enacted by the authority aforesaid, that it shall and may be lawful for the said Post-master General, in order more efficiently and properly to perform the duties of his office, to nominate and appoint the following clerks, assistants and servants, and no other in and for the General Post-office, and to pay the same at the annual rates hereafter provided, to wit:—One clerk, whose salary shall be £170 currency, per annum; one book keeper, whose salary shall be £250 currency, per annum; one assistant book keeper, whose salary shall be £150 currency, per annum; and one messenger, with an allowance of £52 currency, per annum; to procure and cause to be kept a seal for the said office, which shall be affixed to commissions of post-masters, and used to authenticate all transcripts and copies which may be required from the department; and the said Post-master General shall and may establish post-offices,

and appoint post-masters, at all such places and villages situated on the post roads that are, or may be established by law; give his assistants, the post-masters, and all other persons whom he shall employ, or who may be employed in any of the departments of the General Post-office, instructions relative to their duty; provide for the carriage of the mail on all post-roads that are or may be established by law, as often as he, having regard to the productiveness thereof and other circumstances, shall think proper; Provided always, that the mails between Quebec and Montreal, and the other places to which mails are now sent five times or more a week, shall hereafter be sent seven times a week at the regular hours, and the post-masters at such places shall attend at their respective offices during three hours on Sundays to deliver and receive letters : provided those hours do not interfere with divine service; and it shall and may be lawful for the said Post-master General also to direct the route or road, where there are more than one, between places designated by law for a post-road, which route shall be considered the post-road; obtain, from the postmasters, their accounts and vouchers for their receipts and expenditures once in three months and oftener, with the balances thereon arissing in favor of the general post-office; pay all expenses which may arise in conducting the post office, and in the conveyance of the mail, and all other necessary expenses arising on the collection of the revenue, and management of the General post-office; prosecute offences against the post office establishment; close and balance his accounts once in three months, that is to say; on the fifth day of January, the fifth day of April, the fifth day of July, and the fifth day of October in each and every year, and render to the Inspector General of public accounts a quarterly account of all receipts and expenditures of the Post-office Department in this Province, to be audited and set, led as other public accounts, and pay over to the Receiver General such balances as may be in his hands on the days above mentioned, for the public use of the Province, and to remain at the future disposition of the Legislature thereof; and the said Post-master General shall superintend the business of the said department, in all the duties that are or may be assigned to it: Provided always, that in case of the death, resignation or removal from office of the Post-master General, all his duties shall be performed by his clerk in the said office, until a successor shall be appointed and arrive at the General Post office to perform the business: Provided also, and it is hereby declared, that all roads in this Province on which mails are at present or may hereafter be transported, are, and shall be considered post roads in the intent and meaning of this Act.

V. And be it further enacted by the authority aforesaid, that the Post-master General and each of the Post-masters shall, before entering into office, under the anthority of this Act, give bond to His Majesty, his heirs and successors for the due and faithful discharge of the duties of his office; and such bond shall, in the case of the Post-master General, be for the sum of four thousand pounds currency; and that of each of the Post-masters at Quebec and Montreal, for the sum of two thousand pounds currency; and such bonds shall be given jointly with two or more good and sufficient sureties (who are hereby required to justify by oath or affirmation, as the case may be,) at the discretion of the person administering the government fo this Province; and the conditions of such bond shall be; that the Post master General (or the post-masters as the case may be) giving such bond, shall well and faithfully discharge and perform each and

every of the duties of his office, and shall render a regular and true account of all monies which shall come into his hands under the authority of this Act; and the King or any individual who may be injured by any breach of the conditions aforesaid, or of any of them may enforce the said bond either against the principal or the sureties who shall be bound jointly and severally with him.

VI. And be it further enacted by the authority aforesaid, that each bond given and entered into under the authority of this Act shall be made double, and shall be taken and received by the Secretary of the Province, or such other officer as the person administering the government shall appoint for that purpose; and one copy shall be deposited in the office of the Prothonotary or clerk of the court of King's Bench, or Provincial court of the district or inferior district in which the person giving such bond is to act, and the other copy shall be deposited in the general post-office of the Province among the records thereof; and any person may have a copy of such bond at either of the said places of deposit on paying two shillings and six-pence currency, for each copy thereof.

VII. And be it further enacted by the authority aforesaid, that whenever any person who shall have become surety as aforesaid, shall die or become insolvent, (public notoriety being sufficient to establish the last named fact,) or shall leave the Province without intending to return to it, the principal party to the bond shall in such case be bound within one calender month after being notified to that effect by the Post-master General, to furnish new sureties under the same conditions, and with the same formalities as herein before mentioned.

VIII. And be it further enacted by the authority aforesaid, that every person who shall take upon himself to execute or perform any duty appertaining to the office of Post-master General, or of post-master, without having previously given security as aforesaid, or who shall neglect or refuse to renew such security when legally required so to do, shall be forever incapacitated from holding any of the said offices, and shall be removed from the office to which he shall have been appointed.

IX. Provided always, and be it further enacted by the authority aforesaid, that whenever any Post-master General or any post-master, shall die, be removed or resign, and that at the expiration of eighteen months from his decease, removal or resignation, it shall not have appeared that such officer has committed any offence, or has neglect ed his duty, the bond by him given in conformity to this Act, shal cease to be binding on the sureties who shall have entered into it their heirs or legal representatives respectively.

X. And be it further enacted by the authority aforesaid, that no person or persons hereafter to be appointed, shall be capable of having, using or exercising within this Province, any employment relating to the post office, or be in any wise concerned in receiving, stamping, sorting, charging, carrying, conveying or delivering of letters or packets, unless such person shall have first taken the following oath, before some justice of the peace or magistrate acting as such for the county, city, or place where such person resides, which said oath such justice of the peace or magistrate is hereby authorised and required to administer:—

" I, A. B. do swear that I will not wittingly, willingly or knowingly open, detain or delay, or cause, procure, permit, or suffer to be opened, detained or delayed any "letter or letters, packet or packets, which shall come into my hands, power or custody by reason of my employment in or relating to the post office, except by the consent of " the person or persons to whom the same is or shall be directed, or except in such cases" " where the party or parties to whom such letter or letters, packet or packets shall be "directed, or who is or are hereby chargeable with the payment of the posts or postage "thereof, shall refuse or neglect to pay the same, and except such letters or packets as " shall be returned for want of true directions, or when the party or parties to whom the same is or shall be directed cannot be found; that I will not in any way embezzle any " letter or letters, packet or packets which shall come into my hands, power or custody " by reason of my employment in or relating to the post office: that I will faithfully per-" form all the duties required of me by my said employment: that I will obey and exe-" cute all such orders and instructions as I may from time to time receive from my supe-" rior officers, and will abstain from every thing forbidden by the laws in relation to the " post office.

XI. And be it further enacted, that for the purposes of this Act, every person of the persuasion of the people called Quakers, and every Moravian shall be permitted to make his or her solemn affirmation or declaration, instead of taking an oath as by this Act required or directed to be taken, which said affirmation or declaration shall be of the same force and effect as if he or she had taken an oath in the usual form; and if any such person making such solemn affirmation or declaration, shall be lawfully convicted, wilfully, falsely and corruptly to have affirmed or declared any matter or thing which if the same had been in the usual form would have amounted to wilful and corrupt perjury, he or she shall incur the same penalties and forfeitures as by the laws and statutes of this Province are enacted against persons convicted of wilful and corrupt perjury, any law, statute or custom to the contrary notwithstanding: Provided always, that every such affirmation or declaration shall be in the words following, that is to say :-

"I, A. B. being one of the people called Quakers, (or) one of the persuasion of the people called Quakers, (or) of the united Brethren called Moravians (as the case may be) do solemnly, sincerely and truly declare and affirm."

XII. And be it further enacted by the authority aforesaid, that it shall and may be lawful for the Post-master General to retain, out of the monies coming into his hands and arising from the post office revenue, a sum not exceeding seven hundred and fifty pounds currency a year, as the full, complete and sole remuneration of his services; and each post-master in this Province is hereby authorised to retain as his full remuneration a per centage on the postage by him collected in each quarter according to the following rates, viz: on a sum not exceeding twenty-five pounds currency, thirty per cent; on any sum over and above the first twenty-five pounds currency, and no exceeding one hundred pounds currency, twenty-five per cent; on any sum over and above the first one hundred pounds currency, and not exceeding six hundred and forty pounds currency, twenty per cent; on any sum over and above the first six hundred and forty pounds, eight per cent; except such post-master or post-masters at, or from whose offices the mail is regularly to arrive or depart between the hours of nine o'clock at night and five o'clock in the morning, whose commission shall be fifty per cent on the first twenty-five pounds collected by them in one quarter: Provided always, that whenever the per centage on the receipts in any post office after deducting therefrom such necessary incidental expenses of the said office as may be approved of by the Post-master General, shall amount to four hundred and fifty pounds currency in any one year, then and in that case, the postmaster at each and every such post office shall be allowed a fixed annual salary of four hundred and fifty pounds currency, for such year in lieu of all per centage or compensation whatever.

XIII. And be it further enacted by the authority aforesaid, that the Post-master General and Post-masters at Quebec, Montreal and Three Rivers, shall abstain from voting or taking any part in the election of any member of the Legislature of this Province on pain of being dismissed from their office, on proof of such offence before one or more justices of the peace, on the oath of one or more credible witnesses.

XIV. And be it further enacted by the authority aforesaid, that the said Post-master General, his post-masters and his servants and agents, and no other person or persons whosoever, shall have the receiving, taking up, ordering, despatching, send post, or with speed carrying and delivering of all letters and packets of letters whatsoever which shall from time to time, and at all times be sent to and from all and every parts and places within this Province, and to and from any place or places within this Province, from or to any place or places out of the same, where posts or post communication are now or may hereafter be settled, established or opened; except such letters as shall solely and exclusively concern goods or merchandize sent by common known carriers of goods or merchandize and delivered with the goods or merchandize such letters do concern, without hire or reward, or other profit or advantage for receiving and delivering such letters; and except such letters as shall be sent by any steamboat or other ship or vessel, and delivered by the master; commander or manager at any post office, pursuant to the directions hereinafter contained; and also except any letter or letters sent by any private friend in his or her way of journey or travel, so as such letter or letters shall be delivered by such friend to the party to whom such letter or letters shall be directed, and also except any letter or letters to be sent by any messenger on purpose for or concerning the private affairs of any person: Provided always, nevertheless, that nothing in the said exception contained shall extend or be construed to extend to give any license or authority to any common known carrier of goods or merchandize, their servants or agents, to receive, collect, earry or deliver with or without hire, any letter or letters, packet or packets of letters whatsover, that do not solely and exclusively concern goods or merchandize in their cars, carts or waggons, nor to any owners, drivers, engineers, guides, servants or guards of stages, coaches, machines or other carriages, although such carriers, owners, drivers, engineers, guides, servants and guards of stage coaches, machines, and carriages do not receive any hire or reward or any advantage for the same, but all such carriers, owners, drivers and guards of stage coaches, machines or other carriages collecting, carrying or delivering letters as aforesaid, though without hire or reward, shall be deemed and taken, and are hereby declared to be persons offending against this Act, and shall forfeit and pay for every letter by them. collected, carried or delivered contrary to the enactment of this present clause, the sum of twenty shillings currency.

XV. And to the end that the persons employed in or about the business of the post-office may not be hindered or impeded in their.

respective duties and employments in or relating to the same. Be it enacted, that no post-master or officer or other person employed under the post-office, within this Province, shall be compelled or compellable to serve upon any jury or inquest, or to appear to serve at any assize or session. or to bear any public office, either ecclesiastical, parochial, municipal, civil or military, or to serve in the militia, but the said post-masters and officers, and other persons aforesaid, shall be wholly and absolutely exempted therefrom.

XVI. And be it further enacted by the authority aforesaid, that from and after the said first day of May, 1836, it shall and may be lawful to and for the said Post-master General for the time being, and his post-masters, servants and agents, to and for the use of His Majesty, his heirs and soccessors, for the exclusive use, profit and advantage of this Province, to demand, have, receive and take for the postage and conveyance of all letters and packets, which he or they shall convey, carry or send by post within this Province according to the several rates and sums of money hereinafter specified, that is to say:

For the postage of each single letter or piece of paper, from the office where it may be posted to a distance of not more than thirty miles, three pence, currency; more than thirty and not exceeding

ninety miles, five pence, currency.

More than ninety miles and not more than one hundred and

eighty miles, seven pence half penny, currency.

More than one hundred and eighty miles and not more than three hundred miles, nine pence, currency; more than three hundred and not exceeding four hundred miles, one shilling, currency; more than four hundred miles, one shilling and three pence, currency.

And for the postage of each double letter, or letters composed of two pieces of paper, double the sums aforesaid, according to the

distances respectively.

And for each triple letter, or letters composed of three pieces of paper, treble the sums aforesaid, according to the distances respectively.

And for each ounce avoirdupoise weight, quadruple the above

rates.

Provided always, that there shall not be received at any postoffice for the purpose of being carried by post, any packet or article
weighing more than three pounds avoirdupoise weight.

XVII. And be it further enacted by the authority aforesaid, that the newspapers printed and published in this Province or in any part of His Majesty's dominions in North America, shall and may be conveyed by the general post in this Province, at the following rates of postage which shall be paid quarterly in advance, that is to say:—

For each copy of any newspaper published once a week and sent

by post, one shilling currency a year.

More than once and not more than twice a week, two shillings a year.

More than twice and not more than three times a week, three

shillings a year.

Whenever such newspapers shall be posted and sent, and such postage shall be paid by the proprietor or printer of each such news-

paper, who is hereby bound to mark on the wrapper envelloping every package of newspapers which he may deposit or cause to be deposited in the post-office, the number of newspapers contained in such package for subscribers, and the number therein contained for printers; and if such number be not truly stated, or if such package shall contain or conceal a letter, or other thing, or any memorandum in writing, in order that the same may be carried by post, free of postage, the printer or proprietor of such newspaper shall, for each such offence, be fined the sum of twenty shillings, and the letter, newspaper, package, memorandum or other thing shall not be delivered to the person to whom it is directed until the amount of a single letter package is paid for each article of which the package is composed: Provided always, that copies of newspapers sent and received in exchange for other newspapers published either within or without the limits of this Province, shall be exempt from the postage herein above mentioned, and shall be conveyed free of postage: Provided also, that for each copy of any newspaper sent by post by any person other than the printer or proprietor of such paper, there shall be paid one half penny currency, either by the person who shall post such paper, or by the person to whom it shall be addressed: provided also, that each such nowspaper shall be sent without envelope, or with an envelope open at one end, and that there shall not be on such newspaper or on the envelope any writing, crosses, marks or signs of any kind except only the words of the address, and that there shall not be contained or concealed therein or attached or annexed thereto any paper or other thing whatsoever, and that there shall be no printed word or communication on the inside of such envelope.

XVIII. And be it further enacted by the authority aforesaid, that newspapers printed and published without the limits of His Majesty's Dominions in North America, or in Great Britain or Ireland, and thence sent to this Province, and newspapers printed and published in this province and posted therein to be sent to Great Britain, Ireland, or elsewhere, shall and may be conveyed by the General Post in this Province, at the rate of one half-penny currency for each sheet; Provided always, that there shall not be on any such newspaper, or on its envelope, any writing, cross-mark or sign whatsoever, other than the words of the address, and that there shall not be contained or concealed therein, or attached or annexed thereto, any paper or other thing whatsoever, and that there shall be no printed word or communication on the inside of such envelope.

XIX. And be it further enacted by the authority aforesaid, that pamphlets, magazines, reviews, almanacs and other periodical publications unbound, and the printed proceedings of the Legislature of any country, state, province or colony, shall, and may be conveyed by the general post in this province, at the rate of one half-penny currency per sheet, under the conditions and restrictions set forth in the foregoing section; and every four folio pages, or eight quarto pages or sixteen, octavo, or twenty-four, duodecimo pages, or pages of less size of a pamphlet, magazine or other printed periodical, whatever be the size of the paper of which it is formed, shall be considered a sheet; and every printed pamphlet or magazine which contains more than twenty-four pages on a royal sheet, or any sheet of less dimen-

sions, shall be charged by the sheet, and small pamphlets printed on a half or quarter sheet of royal, or less size, shall be charged with the amount of postage charged on a full sheet; and there shall be printed or written on one of the outer pages or cover of all pamphlets, magazines or printed proceedings to be sent by mail, the number of sheets they contain; and if such number shall not be truly stated, double postage shall be charged.

XX. And be it further enacted by the authority aforesaid, that it shall and may be lawful to and for the Post-master General for the time being, to settle and establish a penny post office in any city or town, or the suburbs thereof, or places adjacent within this Province, where the Post-master General shall deem the same necessary and expedient, and to continue as long as he may deem expedient, all the posts of a like description which are now established, and to demand, receive and take for the postage and conveyance of all letters and packets conveyed or carried by such posts, according to the rates and sums hereinafter mentioned, that is to say:

For every letter or packet originally sent by the general post, and afterwards delivered by the penny post, or originally sent by the penny post, and afterwards passing through the general post, the sum of one penny over and above all other rates chargeable for the con-

veyance of such letter or packet.

And for every letter or packet originally sent by the penny post, and not first passing, or afterwards to pass through the general post, the sum of one penny currency.

XXI. And be it further enacted by the authority aforesaid, that no letter or packet shall be forwarded by any penny post which shall exceed the weight of four ounces, other than such as have first passed, or be afterwards to pass by the general post.

XXII. And be it further enacted by the authority aforesaid, that the better to provide for the expenses of the post office within this Province, it shall and may be lawful for His Majesty's Post-master General for the time being, and his Post-masters to demand and receive in any city, town or place where no penny post shall be established, and in which the post-master General shall employ letter-carriers for delivering letters and packets at the houses of the inhabitants (over and above, and in addition to the several rates hereby granted,) the rates hereinafter mentioned, that is to say:

On every letter or packet not being a newspaper, delivered by any such letter-carrier within any distance, not exceeding a mile and a half from the post office, the sum of one penny currency, and on every letter or packet (not being a newspaper) delivered beyond that

distance, the sum of one penny half-penny, currency:

And on every newspaper delivered by any such letter-carrier within the aforesaid distance of a mile and a half, the sum of one half-penny, currency, and on every newspaper delivered beyond that distance, the sum of one penny currency: Provided always, that no letter, newspaper, or packet shall be sent out for delivery by a letter-carrier, for any person or persons who shall have lodged and deposited at the post office a request in writing, that his, her, or their letters and correspondence may be retained and kept at the post office, till called for.

XXIII. And be it further enacted by the authority aforesaid, that it shall be lawful for His Majesty's Post-master General in this Province, and his post-master and post-masters, to demand and receive in respect to every letter or packet left or deposited at any post office, not to be sent or conveyed by the post, but to be delivered at the post office where the same shall be so deposited, the sum of one penny, either of the person by whom such letter or packet shall be left or deposited, or of the person to whom the same shall be delivered.

XXIV. And be it further enacted by the authority aforesaid, that it shall and may be lawful to and for the Post-master General to contract for the conveyance of mails of letters by any steam-boat or other vessel, in such manner as he shall judge most advantageous to the public revenue, to or from any port or place within this Province, at the rate provided in the next following clause of this Act, and to forward the same accordingly, and to demand and take for such conveyance the same rates and duties of postage according to the distance, as if such letters and packets were conveyed by land.

XXV. And be it further enacted by the authority aforesaid, that it shall and may be lawful for the Post-master General, to allow the proprietors of steam-boats, or the masters of other vessels, the sum of one penny a letter upon all such letters (except newspapers and such letters as are hereinafter excepted) as they respectively on their arrival, shall duly deliver, or cause to be delivered, into the post office of the places at which such steam-boats may touch or be bound; and the person in charge of such steam-boat or vessel shall, and is hereby bound to deliver or cause to be delivered, within half an hour after his arrival at Quebec or Montreal, (if between five o'clock in the morning and eight o'clock at night) and if at any other time within one hour after the next sun-rise, to the post-master of each of such cities (who is hereby obliged to receive, when so presented) any letters, or mails, or packets of letters which may be on board his steam-boat or vessel, and any master, commander, consignee, agent or proprietor of any steam-boat or vessel, or any other person who shall abstract or take any letter or letters out of or from any letter bag or box or other envelope, or from on board any steam-boat or vessel, previous to such being transmitted to the post office, or who shall otherwise offend against the provision of this Act, shall, for every such offence, forfeit and pay the sum of twenty pounds currency: Provided always, and it is hereby declared that nothing in this clause contained shall be construed to extend to bills of lading relating to the cargo or a part of the cargo on board of such steam-boats or vessels, or any letter or letters written and directed to or by the agents of the steam-boats on the business of such steam-boats, or to the consignees of vessels coming from sea, which letters coming by steam-boats or vessels are hereby declared exempt from postage; and in order that no person hereby affected shall plead ignorance of this clause, it is hereby further enacted that a copy of this clause shall be furnished by the Trinity House to each steam-boat and vessel arriving or about to arrive in the port of Quebec.

XXVI. And be it further enacted by the authority aforesaid, that if any person to whom any letters may be entrusted for the purpose

of bringing the same on shore from any steamboat or vessel, shall break the seal of the bag, box, or other envelope, or in any manner open the same, or shall not duly deliver the same without delay, every person so offending shall be guilty of a misdemeanor, and shall be confined in the house of correction, penitentiary or common gaol of the District, and put to hard labor for a term not exceeding twelve months.

XXVII. And be it further enacted by the authority aforesaid, that it shall be lawful for His Majesty's Post-master General and his post-master or post-masters or any of the officers employed under him or them respectively, to examine and search any printed paper or packet, which under the provisions of this Act shall be sent by the post without a cover or in a cover open at the sides as aforesaid, in order to discover whether any other paper or thing whatsoever be enclosed or concealed in or with such printed paper or packet; and in case any such other paper or thing whatsoever shall be found to be enclosed or concealed in or with such printed paper or packet as aforesaid, or in case there shall be any writing, or any printed words or communication upon the said paper or packet, or on the cover thereof other than the address, the whole of such packet shall be charged with treble the duty of letter postage.

XXVIII. And be it further enacted by the authority aforesaid, that in all cases in which any dispute, controversy or question shall arise, whether any printed paper sent, or attempted or offered to be sent by the post within this province, is to be considered and deemed a newspaper, printed vote, act, or proceedings of any Legislature or House of Assembly, or printed magazine, review, almanack or pamphlet, within the intent and meaning of this Act, the question shall be referred to the judgement and determination of the Post-master General for the time being, whose decision shall be final and conclusive on all persons whomsoever.

XXIX. And be it further enacted by the authority aforesaid, that nothing herein contained shall be construed to oblige any person or persons to send any printed votes or legislative proceedings as aforesaid or printed newspapers, through His Majesty's post-office, but that it shall and may be lawful for all persons to send such printed votes, proceedings and printed newspapers, in any manner they may find practicable or convenient.

XXX. And be it further enacted by the authority aforesaid, that in case any person to whom any letter or packet sent by the post, shall be directed, shall have removed from the place to which such letter or packet shall be addressed, prior to arrival thereof at such place, then, and in every such case it shall be lawful for the said Postmaster General his post-masters and agents to demand, have and receive from the person to whom such letter shall be directed, over and beyond the rate of postage that would be payable for the same if delivered at the port, town or place to which such letters were originally directed, a distinct further rate of postage after the rates authorised by the provisions of this present Act, for the distance from such port, town or place, to the place or places to which the same, may ultimately be forwarded.

XXXI. And be it further enacted by the authority aforesaid, that it shall and may be lawful to, and for the said Post-master General, and he is hereby required, to make such arrangements as he shall deem expedient to cause the rates or sums payable under this Act, for the postage of all letters, packets and printed papers which shall be sent out of this Prevince to any of His Majesty's Provinces in North America, or to Great Britain or Ireland, or to the United States of America, to be collected at the post-office at which the same may be delivered.

XXXII. And be it further enacted by the authority aforesaid, that post-masters shall respectively publish at the expiration of every three months, or oftener, when the Post-master General shall so direct, in one of the newspapers published in the French and in one published in the English language, having the most circulation in the vicinity of his office, for three successive weeks, a list of all letters remaining in their offices, provided such advertisement be inserted for and during the said three weeks, three times at the rate of one penny for each letter mentioned in the said list, and if no newspaper be published in the immediate vicinity, or if the list aforesaid cannot be published at the rate above prescribed, then the post-master shall be bound to make out a sufficient number of such lists, and cause them to be posted, one in the post-office where the letters are lying, and the remainder at such public places in the vicinity, as shall apper best adapted for the information of the parties concerned; and at the expiration of the next three months, shall send such of the said letters as shall then remain on hand marked "refused" or "unclaimed," as the case may be, as dead letters to the general post-office of this Province, where the same shall be opened and inspected; and it shall be the duty of the Post-master General to return all such letters to the writers thereof, upon payment of the postage, and in case the writer thereof cannot be found, or when found, refuse to take back the said letter, then it shall and may be lawful for the Post-master General, by the hands of a clerk sworn to keep secret the contents of such letters, to be by him named for that purpose, to burn and destroy all such refused or unclaimed letters which shall have remained three months in the dead letter office: Provided also, that if any valuable papers or matters of consequence shall be found therein, the Post-master General shall be bound to return such letter to the writer thereof, or cause a descriptive list thereof to be inserted in one of the newspapers published at the place most convenient to the supposed residence of the owner, if within this Province; and such letter and the contents thereof shall be preserved, to be delivered to the person to whom the same shall be addressed, upon payment of the postage, and the expense of publication :- and if such letter contain money, the Post-master General may appropriate it to the use of the department, keeping an account thereof, and the amount shall be paid by the department to the rightful claimant, as soon as he shall be found.

XXXIII. And be it further enacted by the authority aforesaid, that the post-masters and other agents of the Post-master General, shall duly account and answer to him for all way letters which shall come to their hands; and for this purpose all post riders and other carriers of the mail, receiving any way letter or letters, (and it shall

be their duty to receive them, if presented more than one mile from a post office,) shall deliver the same, together with the postage, if paid, at the first post office to which they shall afterwards arrive; where the post-master shall duly enter the same, and specify the number and rate or rates in the post bill, adding to the rate of each way letter one-half penny, which shall be paid by the post-master to the mail carrier from whom such way letters shall be received.

XXXIV. And be it further enacted by the authority aforesaid, that the postage marked on any letter or packet, and charged in the letter bill which may accompany the same, shall be presumptive evidence in favor of the Postmaster by whom the same shall be delivered of the lawful postage thereon, unless such letter or packet shall be opened in presence of the Postmaster or his clerk.

XXXV. And be it further enacted by the authority aforesaid, that ir case any action, suit or other proceeding at law, shall at any time hereaster be instituted or commenced against any Postmaster, agent, officer, or letter carrier, and his, her or their sureties, or any of them, for the recovery of any sum or sums of money for or on account of the postage of letters, whether the claim shall arise on any bond or obligation or otherwise, all such actions, suits or other proceedings shall be instituted and carried on in the name of his Majesty, his heirs and successors; and an account made out and signed by the Postmaster General, shall in all courts of law and equity, and before any Justice of the Peace, be allowed, admitted and received as sufficient evidence of the facts stated in such account, and of the money thereby appearing, or therein stated to be charged and chargeable on any such Postmaster, agent, officer or letter carrier, for or on account of the port and postage of letters and packets being duly charged and chargeable on and legally due and owing from him, her or them, for or on account of the port or postage of letters or packets, without further proof thereof, unless by other evidence the contrary shall be made to appear.

XXXVI. And be it further enacted by the authority aforesaid, that it shall be lawful to and for the Post-master General to require all post-masters, receivers, letter carriers and other officers employed in the service of the post office within his Province to verify the several accounts by a written declaration before some magistrate or justice of the peace, (who is hereby empowered and required to witness and take the said declaration, and that any post-master, receiver, letter carrier or officer who shall knowingly declare falsely to any such account, shall be guilty of a misdemeanor, and being convicted thereof shall forfeit and pay the sum of fifty pounds currency, and be imprisoned in any gaol, house of correction or penitentiary for the space of one year.

XXXVII. And be it further enacted by the authority aforesaid, that no fee, perquisite or gratuity shall be received in any case whatever by any person employed in the post office department, on account of the duties to be performed by virtue of his office, other than such as are specially mentioned in this Act; and no post-master or assistant post-master shall act as agent for lottery offices, whether British

colonial or foreign, or under any colour of purchase or otherwise yend lottery tickets, nor shall-any post-master receive, free of postage, or frank lottery schemes, circulars or tickets; and any post-master violating this provision of this Act, shall, upon conviction before any one or more Justices of the Peace, be fined in the sum of ten pounds currency.

XXXVIII. And be it further enacted by the authority aforesaid, that the Post-master General shall be bound once in every year to transmit to, and lay before the Legislative Council, and the House of Assembly of this Province, within the first fifteen days after the opening of the Parliament thereof, a detailed report, under his hand, of the transactions, proceedings, and actual state of the post-office department for the year ending on the fifth day of October, which report shall be accompanied by a regular debit and credit account, showing the amount of revenue derived by the departmet in this province within the said your from each of the several sources of eletter postage," "newspaper and pamphlet postage," "fines," and the amount of expenditure incurred and paid by the department, under each of the following heads, to wit—"compensation to post-masters," "transportation of mails," "Paid on ship, steam-boat, and way letters." "wrapping paper," office furniture," "advertising," "mail bags, and repairs thereof," "blanks," "mail locks, keys, and stamps," "mail depredations," "special agents," "clerks, &c. for offices," and "miscellaneous," and finally, the balance if any there be; and the said report shall be also accompanied by a return, showing the number of applications made during the preceding year for new post-offices in this Province, the places for which the same were demanded, and the actual number of new post-offices put into operation during the same period, and the names of the place or places where the same were established, and likewise by a return of the defaulters to the post-office department within the said year.

XXXIX. And be it further enacted by the authority aforesaid, that from and after the passing of this Act, it shall and may be lawful to and for each and every member of the Legislative Council and Assembly of this Province, during their actual attendance on any Session of the Legislature, and thirty days before and thirty days after such Session, to send by the general post to any place or places within this Province, and to receive, free from the duty of postage, any number of letters or packets, so as none of such letters or packets, (documents printed by order of either branch of the Legislature excepted,) shall exceed the weight of two ounces.

XL. Provided always, and be it further enacted by the authority aforesaid, that no letter or packet whatsoever directed by my member of the Legislative Council or Assembly of this Province, shall be exempted from the payment of postage, unless the whole superscription upon every such letter or packet so sent, shall be of the handwriting of the member directing the same, and shall have endorsed thereon the name of such member, together with the name of the post-town from which the same is intended to be sent, and the day, month and year, when the same shall be put into the post-office, the day of the month to be in words at length, and the whole to be in the hand-writing of the member, and also unless every such letter or

packet shall be put into the General Post Office or other post officeor into any receiving house or place appointed by His Majesty's Post, master General, for the receipt of letters and packets to be forwarded by the post on the day of the date put on such letter or packet, and unless the member whose name shall be endorsed thereon shall actually be in the post town, into the post office of which every such letter or packet shall be put, or within twenty miles of such post town, on the day or on the day before the day on which such letter or packet shall be put into the post office.

XLI. And be it further enacted by the authority aforesaid, that from and after the passing of this Act, it shall be lawful for each and every member of the Legislative Council or Assembly of this Province, to receive, free from the duty of postage by the general post, all school returns addressed to him, and all petitions addressed to either Honse of Parliament: Provided the same be sent without a cover, or in a cover open at one side.

XLII. And whereas frauds may be practised in sending covers, letters and packets by the post, directed to the members of the Legislative Council and Assembly, at places where such members do not actually reside, and are not then resident, and at different houses and places in the same post town, and directing covers of letters and packets to members at their usual places of residence, containing letters and packets intended for others, and not intended for such members, to whom the covers, letters, and packets are so directed, on which covers, letters, and packets so directed and enclosed, private marks may be put, whereby the persons for whom such letters are really intended may receive such covers, letters and packets free from the duty of postage, to the injury of the revenue: For remedy whereof, be it enacted, that it shall and may be lawful to and for the said Post-master General, and all persons acting under this Act, to charge the whole of such covers, letters and packets with the full duty of letter postage, according to the rates established by this Act, and any thing herein contained to the contrary in any wise notwithstanding: Provided always, that if it shall appear by the certificate of such member, that such cover, letter or packet so charged, was actually intended for such member, and not covering a correspondence to any other person, that then and in every such case, the postage so charged and paid for every such letter, cover or packet shall be returned to such member.

XLIII. And be it further enacted by the authority of the same, that it shall be lawful for the Governor, Lieutenant Governor or person administering the government of this Province, and the Post-master General, to send and receive letters and packets by the general post from or to any place within this Province free from the duty of postage; and all letters which shall be addressed to, or transmitted by, the Secretary of the Province, the Civil Secretary of the Governor in Chief or person administering the government, the senior Clerk of the Executive Council, the Receiver General, the Attorney General, the Inspector General of public accounts, the Adjutant General of Militia, relating solely and exclusively to the business of the said respective offices and departments, shall pass by the general post to and from places within this Province, free from postage: Provided.

such Secretary of the Province, the Civil Secretary of the Governor, the Senior Clerk of the Executive Council, the Attorney General, the Receiver General, the Inspector General of Public Accounts, the Adjutant General of Militia, shall make oath before any Justice of Peace (who is hereby empowered to administer the same) that they will make use of the privilege hereby granted, solely and exclusively for the transaction of the public business of their several Departments; and all printed copies of the Laws or Provincial Statutes, the distribution whereof, is or may be directed by any Act of the Provincial Parliament, may be conveyed by post, free of postage, any thing in this Act to the contraray notwithstanding, by the officer appointed to superintend such distribution, who is hereby bound to accompany the copies of such Laws deposited in the Post office for distribution, by a written certificate, signed by him, verifying the number of copies so transmitted.

XLIV. And be it further enacted by the authority aforesaid, that if any letter, paper or thing shall be sent under cover to any of the said last mentioned officers, the same not being actually and bona fide on His Majesty's service, and relating exclusively to the business of their respective departments, the officers to whom the same shall be sent are hereby strictly required and enjoined to transmit the same forthwith to the Post Office, with the covers under which the same were sent, in order that the contents thereof may be charged with the full rates of postage.

XLV. And be it further enacted by the authority aforesaid, that the Post-masters in the several parts of this Province may send and receive, free of postage, by the Provincial post, any paper, letter or packet, not exceeding an ounce in weight: Provided always, that when the same shall be sent by any Post-master, his name written with his own hand, shall accompany the mark shewing it to be free, which he shall put upon it; such post-master being further subject to such rules and regulations not contrary to this Act, as the Post-master General may make and establish in this behalf, for the benefit of the public service, and which he shall set forth in his annual report, to be made as hereinbefore provided.

XLVI. And be it further enacted by the authority aforesaid, That every person within this Province, who under and by virtue of the provisions of this Act, shall be entitled to send letters by the post free of postage, shall, previous to exercising such priviledge for the first time in any town or place where he may happen to be, deliver at the post-office of every such town or place, an autograph of his name in the manner in which he usually signs and writes the same, and in default thereof, his letters posted at any such town or place shall be liable to be charged with the full rates of postage.

XLVII. And be it further enacted by the authority afcresaid, that all letters arriving in this Province by the post, from the Lord High Chancellor of Great Britain, the Speaker of the House of Commons, the Lord High Treasurer or First Lord Commissioner of His Majesty's Treasury in Great Britain, the Commissioners of the Treasury, His Majesty's Principal Secretaries of State, the Chancellor of His Majesty's Exchequer of Great Britain, His Majesty's Post-master

General, the President of the committee of Council appointed for the consideration of matters relating to trade and foreign plantations. the clerks of His Majesty's most honorable Privy Council, the Judge Advocate General, the agent of this Province on of the house of Assembly of this Province, in London, the Secretary and assistant Secretaries of His Majesty's Post-master General in London, the Commander in Chief of His Majesty's Forces, the military Secretary to the Commander in Chief of His Majesty's Forces, the Master General of the Board of Ordinance, the Inspector General of Fortifications, the quarter master general of His Majesty's Forces, the Adjutant General of His Majesty's Forces, the Comptroller of Army Accounts, the Secretary at War, the Deputy Secretary at War, the Pay Master General of the forces, and from the Lord high Admiral or first Lord Commissioner of the Admiralry, and the secretaries of the Admiralty respectively, shall be conveyed by the general post within this Province free from the duty of postage: Provided always. that all and every such letters be directed, dated and tranked in conformity with the franking Acts from time to time in force in Great Britain and Ireland, but not otherwise, and all letters and packets put into any post-office within this Province addressed to any of the said last mentioned public officers shall be forwarded free of the duty of postage.

XLVIII. And be it further enacted by the authority aforesaid, that all letters and packets sent from the Treasury, the Admirally Office, the Offices of his majesty's Principal Secretaries of State, the War Office, the Commander in Chief's Office, the Board of Ordnance, the Adjutant General's Office, the Quarter Master General's Office, or the Commissioner's Office for the issue of Exchequer Bills, all at London, and which shall apppear by endorsement made thereupon by some person properly authorized to make the same, to be upon his majesty's service, and shall be sealed with the seal of the Principal Officer in the Office or Department from which they are sent, shall be also exempt within this Province from the duty of postage.

XLIX. And be it further enacted by the authority aforesaid. that the carriage of the mails on the several post routes shall be given to the lowest bidder, under one or more contracts, after the Post Master General shall have given notice during two months in one Newspaper published in the English and in one published in the French language, in the cities of Quebec and Montreal, and in the District where the service is to be performed, provided a Newspaper be published in the said district, that he is prepared to receive tenders for the carriage of the said mails; and such notice shall specify the conditions of the contract, and shall state that any person may obtain detailed information by applying personally or by letter to the general post office at Quebec, and shall also expressly state that such tenders must be accompanied by the names of two sufficient sureties to the satisfaction of the Post-master General; Provided always, that no contract shall be given for any route for more than three years; and provided. further that all agreements and contracts in the said behalf remaining in force at the time this Act shall take effect, shall be executed according to their tenor: Provided nevertheless, that if during the continuance of any contract the direction of the post line or route shall be changed, the contract passed with regard to the same shall become

null and void, and new tenders shall be advertised for in the manner hereinbefore prescribed; and in case any person or persons who shall hereafter make any proposal in writing to carry or transport the mail upon any route or routes which may be advertised to be let, and such person or persons shall be determined by the Post-master General to be entitled to the contract by virtue of such proposition, and if such person or persons shall fail or refuse to enter into an obligation with good and sufficient security to perform such contract within the time required by the Post-master General in such advertisement, such person or persons shall forfeit and pay so much money as shall be the difference between the amount contained in such proposal and the amount the Post-master General shall have to pay for the same transportation of the mail on such route or routes; which sum may be recovered by the Post-master General in a simple action in any of His Majesty's courts of civil jurisdiction within this Province.

- L. Provided always, and be it further enacted by the authority aforesaid, that no person in any way connected with the Post Office Department in this Province, or who shall have become surety for an officer of the said Department, shall have any share or interest in any contract for the carriage of any mail or become surety for the due performance of such contract, under a penalty of one hundred pounds currency, recoverable with costs by action in any Court of King's Bench.
- LI. And be it further enacted by the authority aforesaid, that it shall be the duty of the Post Master General to cause to be filed with all convenient despatch in the office of the Provincial Secretary, copies of all tenders and contracts made and entered into for the service of the Post Office Department; and the copies of such tenders and contracts so filed as aforesaid shall be accompanied by a statement of all extraordinary allowances connected with the carriage of the said Mails.
- LII. And be it further enacted by the authority aforesaid, that if any person whatever shall steal any bag or mail of letters or packets, or shall steal any letter or packet sent by the post, from or out of any bag or mail of letters or packets, or from or out of any carriage, vessel, or boat for the conveyance of letters or packets sent by the post, or from or out of any Post Office, or from the possession of any person employed by or under the Post Office, every such offender shall be guilty of felony without benefit of clergy, and being convicted thereof, shall be transported beyond the seas to any of His Majesty's penal colonies, for any term not exceeding fourteen years; and if any person whatever shall rob any person employed by or under the Post Office of any bag or mail of letters or packets, or of any letter or packet sent by the post, every such offender shall be deemed guilty of felony without benefit of Clergy, and on being convicted thereof, shall be subjected to the last mentioned penalty.
- LIII. And it is hereby declared and enacted by the authority aforesaid, that every letter and packet shall be deemed and considered to be sent by the post for all the purposes of this Act, when and as soon as the same shall have been deposited or delivered at or in any Post Office, or to or with any person to whom the same is di-

rected or addressed: And it is hereby declared and enacted, that every house, office or place for the receipt or delivery of letters or packets sent by the post shall be deemed and considered a post-office for all the purposes of this Act.

LIV. And be it further enacted by the authority aforesaid, that if any person employed by or under the post-office, or not, shall for any purpose whatever embezzle, secrete or destroy any bag or mail of letters or packets, or any letter or packet sent by the post, or shall steal from or out of any letter or packet as aforesaid, or embezzle, secrete or destroy any chattel, property or money whatsoever, or the whole or any part of any tally, order or other security whatsoever, entitling or evidencing the title of any person or body corporate to any share or interest in any public stock or fund, whether of this Province or of any other Kingdom, country or Province, or in any fund of any body corporate, company or society, or to any deposit in any savings' Bank, or any debenture, deed, bond, bill, note, warrant, order or other security whatsoever for money, or payment of money, whether of this Province or of any other Kingdom country or Province, or warrant or order for the delivery or transers of any goods or valuable thing transmitted by post, or deposited in the post office for transmission or delivery, every such offender shall be guilty of felony without benefit of clergy, and shall on conviction thereof be transported beyond the scas, to any of His Majesty's penal colonies, for a term not less than two years, but which may be extended to transportation for life; and it is hereby declared that each of the several documents hereinbefore enumerated, shall, throughout this Act be deemed for any purpose to be included under and denoted by the words "valuable security."

LV. And for preventing difficulties in the prosecution of the last mentioned offenders; be it enacted that it shall be lawful to charge in the indictment and proceed against any such offender for any number of distinct acts of embezzlement not exceeding three, which may have been committed by him within the space of six calendar months from the first to the last of such acts, and in every such indictment, except where the offence shall relate to any chattel property, it shall be sufficient to allege the embezzlement to be of money without specifying any particular coin or valuable security, and such allegation so far as regards the description of the property shall be sustained if the offender shall be proved to have embezzled any amount, although the particular species of com or valuable security of which such amount was composed shall not be proved, or if it shall be proved to have embezzled any piece of coin or valuable security, or any portion of the value thereof, although such piece of coin or valuable security may have been delivered to him in order that some part of the value thereof should be returned to the party delivering the same, and although such part shall have been returned accordingly, and it shall be lawful in every such indictment to lay the property of any such chattel, money or valuable security so embezzled or secreted as aloresaid in the King's Majesty.

LVI. And be it further enacted by the authority aforesaid, that if any person employed by or under the post office shall give, rander or deliver any false account, statement or return of any monies re-

ceived or paid, or to be received or paid, by or to him by virtue or in respect of his employment, or shall make any claim, charge or demand of money upon or from any person by virtue or under color of his office, with a view or intent in either of such cases to defraud any person, every such person shall be guilty of misdemeanor, and on being convicted thereof, shall be liable at the discretion of the court, to be imprisoned with hard labour for a period not exceeding six years.

LVII. And be it further enacted by the authority aforesaid, that if any person employed by or under the Post Office shall unlawfully open or shall procure or suffer to be unlawfully opened, any bag or mail of letters letters or packets or any letter or packet whatever sent by the post; or shall wilfully detain or delay or procure or suffer to be detained or delayed any bag or mail of letters or packets, or any letter or packet whatever sent by the posts in course of conveyance or delivery thereof by the post, every such person on being convicted thereof, shall be imprisoned with hard labour, for a term not exceeding six years.

LVIII. Provided always, and be it further enacted by the authority aforesaid, that nothing in the foregoing clause contained shall extend or be construed to extend to cases opening or detaining or delaying letters or packets sent by the post which shall or may have been returned to the dead letter office, for want of true directions, or of letters or packets sent by the post, and returned by reason that the person to whom the same are directed cannot be found, or have refused or neglected to pay the postage thereof.

LIX. And be it further enacted by the authority aforesaid, that if any person whatever, whether employed by or under the post office or not, shall by any means whatever fraudulently obtain or cause to be obtained from any post office, or from any person employed by or under the post office, any bag or mail of letters or packets, or any letter or packet whatever sent by the post, or shall fraudulently retain after the delivery thereof to or for him any letter or packet whatso-soever or any thing contained therein, sent by the post for or belonging to, or which ought to have been delivered to or for any other person, every such offender shall be guilty of felony without benefit of clergy, and being thereof convicted, shall be subjected to the penalties hereinbefore enacted in the fifty-second clause of this Act.

LX. And with regard to receivers of stolen property sent by the post; be it enacted by the authority aforesaid, that if any person whatever shall receive any bag or mail of letters, or packets or any letter or packet whatever sent by the post or any chattel or money, or the whole or any part of valuable security, the stealing taking embezzling or secreting whereof shall amount to a felony without benefit of clergy, under this Act such person knowing the same to have been feloniously stolen, taken, embezzled or secreted, or in the case of any chattel or money, or the whole or any part of any valuable security knowing the same to have been contained in any letter or packet sent by post, every such receiver shall be guilty of felony without benefit of clergy, and may be indicted and convicted as accessary after the fact or for a substantive felony, without benefit of clergy, and in the latter case whether the principal offender shall or shall not have been pre-

viously convicted, or shall not be amenable to justice, and every such receiver howsoever convicted, shall be liable to the same penalties as the principal offender would be subject to were he convicted.

LXI. And whereas it sometimes happens that bags and mails of letters and packets sent by the post are lost in the course of conveyance, and are detained by persons finding the same, in the expectation of gain or reward: Be it enacted by the authority aforesaid, that if any person whatever shall wilfully secrete, keep or detain, or being required to deliver up by any person employed by or under the post office, shall refuse or neglect to deliver up any bag or mail of letters or packets sent by the post, or made up in order to be sent by the post, or any letter or packet sent by the post which shall have been lost, whether the same shall have been found or picked up by the person secreting, or refusing to deliver up the same. Or by any other person, every such offender shall be guilty of a misdemeanor, and being convicted thereof shall be liable to such punishment by fine, not exceeding fifty pounds, or imprisonment for any period not exceeding two years, as to the court shall seem meet.

LXII. And be it further enacted by the authority aforesaid, that if any person whatever shall assault any person employed by or under the post office, or any coachman, post-boy, rider, driver, runner, boatman, or other person engaged in the conveying of any bag or mail of letters or packets, or of any letter or packet sent by the post, in the execution of his duty, or shall by any means whatever wilfully impede. obstruct or prevent the passage of any carriage, horse, vessel, or boat used or employed in the conveyance, or any bag or mail of letters or packets, or of any letter or packet sent by the post, shall impede, obstruct or prevent the service of the post office in any manner howsoever, every such offender shall be guilty of misdemeanor, and on being convicted thereof, shall be liable to such punishment by fine, not exceeding fifty pounds currency, or imprisonment for any period not exceeding two years, as to the court shall seem meet.

LXIII. And whereas it frequently happens that bags and mails of letters, and packets and letters, and packets sent by the post are lost or delayed in the conveyance thereof by the carelessness, negligence or other misconduct of guards, coachmen, post-boys, riders, drivers, runners, boatmen, or others engaged or employed in carrying, conveying or delivering the same: Be it therefore enacted, that if any letter carrier, guard, coachman, post-boy, rider, driver, runner, boatman, waterman, or other person engaged or employed in carrying, conveying or delivering any bag or mail of letters or packets, or any letter or packet sent by the post shall, whilst so ongaged or employed or whilst the same shall be in his custody, care or possession, quit, leave or desert any bag or mail of letters or packets or any letter or packet sent by the post, or shall suffer to permit any person employed for that purpose, to ride in the place appointed for the guard in or upon any carriage used for the conveyance of any bag or mail of letters or packets, or any letter or packet sent by the post, or to ride in or upon any carriage so used, or upon any horse used for the conveyance on horseback of any bag or mail of letters or packets, or any letter or packet sent by the post, or if any such person shall be guilty of any act of drunkenness, or of carelessness, negligence

or other misconduct, whereby the safety of any bag or mail of letters or packets, or any letter or packet sent by the post, shall or may be endangered, or if any such person shall collect, receive, convey or deliver any letter or packet otherwise than in the ordinary course of the post, or if any such person shall give any false information, statement or account of any assault or attempt at robbery upon him, or if any such person shall loiter on the road or passage, or wilfully misspend his time, so as to retard or delay the progress or arrival of any bag or mail of letters or packets, or any letter or packet sent by the post, or shall not use due and proper care and diligence, safely to convey such mail of letters or packets, or any letter or packet sent by the post, at the rate appointed by and according to the regulations of the post office for the time being, every such offender being thereof convicted before one or more Justices of the Peace shall, at the discretion of such Justice or Justices, forfeit and pay a sum of not less than twenty shillings currency, and not exceeding ten pounds currency, or be imprisoned for any period not exceeding three calendar months, as to the said Justice or Justices shall seem meet.

LXIV. And in order to prevent the imitation or forgery of lawful franks; be it enacted, that if any person whatever shall forge and counterfeit the hand-writing of any other person on or to the superscription of any letter or packet sent or to be sent by the post, or shall alter or change, upon any letter or packet sent or to be sent by the post, the superscription thereof or any part, thereof, or shall write or send by the post, or cause to be written or sent by the post, any letter or packet, the superscription whereof or any part of the superscription whereof shall be forged, or counterfeited, or altered, knowing the same to be lorged, counterfeited or altered, with intent in either of those cases to avoid the payment of the duty of postage, every such offender shall be guilty of a misdemeanor, and being convicted thereof in due form of law, shall be fined in a sum not exceeding ten pounds currency, or imprisoned for a term not exceeding two years.

LXV. And be it further enacted by the authority aforesaid, that if any person whatever shall forge or counterfeit, upon any letter or packet, any stamp, mark or impression used or made by the post office, upon any letters or packets sent by the post, or shall alter any such stamp, mark or impression upon any letter or packet, knowing the same to be forged or counterfeited, or if any person shall knowingly obtain or demand any money from any person for or in respect of any letter or packet, or of any letter or packet not sent by the post as and for the postage thereof, every such offender shall be guilty of misdemeanor, and on conviction, shall be subject to the pains or penalties mentioned in the last mentioned clause of this Act.

LXVI. And it is hereby declared and enacted by the authority aforesaid, that every person employed in transacting any business relating to the post office, whether such person shall have been employed, engaged by any Post-master General, or by any Post-master or agent of any Post-master General, or whether any such person shall be employed constantly or occasionally, and whether any such person shall receive any hire, pay, or reward for his or her services or not, shall be deemed and considered to be employed under the post office for all the purposes of this Act.

F

LXVII. And be it further enacted by the authority aforesaid, that no action or suit shall be commenced against any person or persons for any thing done in pursuance of this Act, unless within six calendar months after the right of action shall have accrued, and the defendant or defendants in such action or suit, shall and may plead the general issue, and give this Act and the special matter in evidence, and that the same was done in pursuance of, and by the authority of this Act, and if it shall appear so to be done or the action or suit shall be commenced after the time before limited for bringing the same, then the jury shall find for the defendant or defendants, and upon a verdict for the defendant or defendants, or if the plaintiff or plaintiffs shall be non-suited or discontinue his, her, or their action or suit after the defendant or defendants shall have appeared, or if upon demurrer, judgment shall be given against the plaintiff or plaintiffs, the defendant or defendants shall and may recover full costs, and have the like remedy for the same as any defendant or defendants hath or have in any other cases by law.

LXVIII. And be it further enacted by the authority aforesaid, that all fines incurred by any person or persons for offences contrary to the provisions of this Act, shall be sued for within the space of one year, next after any such fine shall be incurred.

LXIX. And be it further enacted by the authority aforesaid that all fines and forfeitures which may be incurred under this Act exceeding twenty shillings, shall and may be prosecuted, sued for and recovered, with full costs of suit, in any Court of Record within this Province having jurisdiction where the cause of prosecution may arise.

LXX. And be it further enacted by the authority aforesaid, that all fines and forfeitures incurred under this Act, shall be sued for in His Majesty's name, and shall be, one half for the use of the person or persons informing and prosecuting for the same, and the other half to His Majesty for the use of this Province, and shall be paid over to the Post-master General, and accounted for by him as other monies of the Department.

LXXI. And in order to avoid the frequent use of divers terms and expressions in this Act, and to prevent any misconstruction of the terms and expressions used therein; be it enacted by the authority aforesaid, that whenever this Act with reference to any person, matter or thing, any word or words, is or are used importing the singular number or the masculine gender only, yet such word or words shall be understood to include several persons as well as one person, females as well as males, bodies politic or corporate, as well as individuals, and several matters or things as well as one matter or thing, unless it be otherwise specially provided, or there be something in the subject or context repugnant to such construction.

## NO. 72.

To the Honorable the Commissioners for obtaining certain information during the Recess .- Doctors Morrison and Bruce.

GENTLEMEN: -

I beg leave respectfully to submit for your consideration the following remarks upon the "Currency," which have been collected from such authority of known practical skill and experience as would if published would be a passport to unbounded confidence. It has long been an acknowledged hinderance, to the settlement and prosperity of this Province, that the capital of the country bore no proportion to the wants of the people, as expressed in the numerous peutions or as compared with the amount of capital and circulating medium in the neighbouring country. My first business therefore while in that country, was to ascertain the latter fact, upon examination I found that the circulating medium in many of the States of the Union was from three to ten times greater than in this Province, in proportion to their population or the ratea-States, as compared with this Province, with a view of ascertaining whether, and in what manner, the requisite amount of circulating medium or rate of exchange was thereby affected; and what influence our comparatively small amount of domestic currency had upon our commerce, in order to ascertain the benefits or dangers of increasing the circulating medium of this Province; also to protect the metallic currency of the

In the United States, the various monied institutions of that country as well as incorporated companics, have recently attracted much public attention, and at this moment when the Bank of the United States is not likely to be rechartered, other monied institutions are springing into existence, as if by magic and the amount of circulating medium has been increased instead of being diminished by the refusal to recharter the United States Bank, so that public opinion is still in favor of increasing the circulating medium and capital of the country, notwithstanding this apparently opposite expression of public opinion. render their currency sound, at the same time that it is increased; they have passed various laws calculated to promote the circulation of a metalic currency, among the laboring, mechanical and small dealing classes of the community, by prohibiting the circulation of small bills; but they could not do that, while the rate of exchange was high against them without a law for the protection of their metalic currency. This act which was passed in 1834, has since been carried into complete and successful operation for the protection of the metalic currency of that country, as appears by the President's Message at the opening of the present Session of their Congress, and the reports of the monied institutions of the different States of the Union, and which, as will appear by a reference to the Appendix, has made it profitable for Brokers & Bunkers to import into the United States gold & silver as well as articles of commerce from this Province, which, while it has enriched the people of the Union has drained

the specie from this Province, and has contributed more perhaps then any other cause to check the circulation of bank paper, and produce thereby the comparatively lower price of our exports by preventing competition among exporting merchants. And this must continue so long as the value of gold and silver is by law higher in the United States than in this Province, for foreign dealers find it more to their interesta to export gold and silver to New York, than any of the products of the markets of this Province. Gold is not by law a lawful tender in this Province, and whenlarge drafts are made upon our monied men or banks here, they will only take gold at their own price which is always such as to allow them a profit, on the articles or they demand Spanish or American dollars or Britbe most likely to be correct, and whose very names ish silver which continues to pass in this Province at the same value in gold, that it did when its value was compared with the value of American gold in the United States previous to the American currency law of 1834; the effect of which has been to induce the exportation of all the gold that was formerly laid by inthe vaults of our Banks and the coffers of the wealthy. So that as I am authorized to say by the officers, of the two large Banks in this Province, there is not £5,000 of gold in their vaults at this moment—as gold not being a lawful tender, they might have any quantity of it on hand, and yet if they had not silver ble valuation of their property. I next inquired into are brought against them, they must stop payment with enough to pay all demands for specie payments that the amount of their imports and exports of the United their vaults filled with gold. And I may further add, that since last Monday one of those institutions has been compelled to furnish in four days £18,000 in silver alone, for the Montreal and American markets, and that the drafts for specie upon the other Banks has not been less-while those very foreign Banks are inundating the country with their small notes, principally ones, which are not redeemable in specie in this Province and which they will not receive in exchange for their own paper here, but require the holders of a worn or uncurrent bill to sustain the loss of discount, or send it to the principal bank in Lower Canada, or a foreign country for redemption. Thus our laborers are heavily taxed to support foreign monied institutions, which are constantly draining this Province of its metalic currency.

I am of opinion that the "currency" of the country requires the protection of the legislature, from the encouragement given for its exportation by neighboring countries. In Lower Canada they have their own depreciated silver coins passing at from one to ten per To cent above their value in this Province, & in the United States they have the recent currency law in their favor -the rate of exchange which is against us-& worn light Spanish silver, in which they can pay our demands or drafts upon them, while we of Upper Canada have no correspondent advantages or means of protecting the

metalic currency of the country.

I would therefore suggest the propriety of placing the value of the metalic currency of this country upon the same standard as that of the United States and of making gold a lawful tender by weight within this Province, and also to adopt some means of preventing the circulation of Bank bills not redeemable in specie in this Province of a less denomination than one pound. and if redeemable in specie within this Province, of one dollar bills or of any of a smaller denomination.

All which is respectfully submitted.

CHARLES DUNCOMBE. Acting Commissioner for obtaining certain information...

# APPENDIX.

#### THE PERSON NAMED IN

The following statement has been very obligingly furnished by Thos. G. Ridout Esq., Casher of the Bank of Upper Canada, showing the actual weight and current value of the several pieces of Gold and Silver noted below with the pieces, themselves for the inspection of the Honourable the House of Assembly.

Province of AYLMER Lower Canada,

William the Fourth by the Grace of God, of the United Kingdom of Great Britain and Ireland, King defender of the Faith; To all whom these presents shall come, or whom the same may concern Greating.

# A PHOCLAMATION

WHEREAS at an Executive Council held at our Castle of St. Lewis, in our City of Quebec, on the 28th day of May, in the year of our Lord 1834; It was by our Governor in Chief of our said Province of Lower Canada, by and with the consent and advice of our Executive Council of our said Province, judged expedient that whereas the Lords Commissioners of our Treasure had directed an examination to be made at our mint of the weight and fineness of the several Coms of the South American States, with the view of enabling our said Lords Commissioners to form an accurate judgment as to the propriety of employing them in common with the old Spanish monies of similar denomination, for the support of the Mititary Chests abroad, and for taking such other steps as may appear to be necessary for facilitating their free circulation in each of the British Colonies and foreign Military stations in which they may be issued with advantage to the community and the convenience of the public service. And that whereas it appears by the result of the said examination that the new South American dollars are in every respect as valuable or rather better in weight and fineness than the dollars coined in Mexico before the separation of that country from Spain and commonly known under the name of pillared dellars and that our said Lords Commissioners had been pleased in consequence to direct that in future the negociation of Bills and otherwise in the Commissariat Department, and in all payments to the Army and Navy issue those coins being genuine and in good condition, shall be received indiscriminately with other Foreign

Silver.

Coin; at the same rate as has been fixed on the old Spanish dollars. We should therefore declare, that the several kinds of South American dollars and their divisional parts described in the reports of our Assaymaster of the eleventh and the fourteenth days of February, 1834, should in future be received and issued by all officers concerned in the collecting, receiving and paying of the public revenue at the same rate, as the old pillared Spanish Dollars, and the divisional parts thereof. We have therefore thought fit, and by and with the advice of our Executive Council, to issue this Proclamation declaring that the said several kinds of South American dollars, and their divisional parts described in the aforesaid Reports of our said Assaymaster shall in future be received and issued by all officers concerned in the collecting, receiving and paying of the public revenues of our said Province, at the same rate as the old pillared Spanish dollars and the divisional parts thereof. The following table shows the comparison with the old Spanish dollar resulting from the above mentioned examination.

#### MINT OFFICE, 14th February, 1834.

Now therefore we do require and command all officers concerned in the collecting receiving and paying of the public revenue of our said Province, and all our loving subjects, and all persons whomsoever the same may concern, to take notice of the premises and govern themselves accordingly.

In testimony whereof, we have caused these our letters to be made patent, and the great seal of our said Province of L. Canada to be hereunto affixed.

Witness our Trusty, &c. &c. &. 11th June, 1834.

D. DALY, Secretary of the Province.

# Value of Gold Coins in the United States by the Act of 1834.

The Eagle coined before July 21st, 1834 (weighing 270 grains and containing 247½ grains of pure gold) must be taken at 94 cents 3 mills per penny-weight, and the halves and quarters in the same proportion.

The Engle coined 31st July, 1834, weighing 258 grains and containing 232 grains of pure gold, must be taken at 810, and the halves and quarters in the

The following foreign gold coins are also a legal tender by weight after the 31st July, 1834.

Those of Great Britoin, Portugal, and Brazil—containing 11 parts pure gold and one alloy at 94 cents and 8 mills for each penny-weight. Those of France containing 9 parts of pure gold and one part of alloy at 98 cents and one mill for each penny-weight.—Those of Spain, Mexico and Columbia, containing 20 parts and 4-5ths of a part of pure gold and 3 parts and 1-5th of a part of alloy at 89 cents and 9 mills for each penny-weight. The following table exhibits the weight and value of each coin after the 31st of July, 1834.

To reduce the light coins to their true value observe, of English, Portuguese and Brazilian gold, one grain is worth 3 cents  $9\frac{1}{2}$  mills—French gold, one grain is worth 3 cents  $8\frac{3}{4}$  mills—Spanish, Mexican and Columbian gold, one grain is worth 3 cents  $7\frac{1}{2}$  mills.

HIRAM NORTON, Esq. M. P. politely furnished the following observations on the Currency of the Upper Province.

The value of all kinds of property, contracts for purchase and sale, for lending and refunding loans of monies and uses or rents of real estate, all are affected by any alteration of the standard coins; and one party to every contract must necessarily be benefitted at the expense of the other. This position applies to every country and government when a coinage exists of sufficient extent to form a basis for the contracts of its inhabitants-but in a colony without its own coinage and established mint, wholly dependant upon the coins of foreign countries for its fulfilment of contracts, it is of the highest importance that such coins be so regulated in value by provincial law as to secure at all times within themselves a sufficient sum for the conveniences of circulation and a basis subject to as little fluctuation as possible for all contracts. Banks offer to the public in their notes for circulation a convenience for remittances from one part of the Province to another and for transfer of the consideration of contracts from one individual to another, both residing in

the same place which is so generally understood that we require no argument or explanation to prove that tish coinage, calculating at 9 per cent, premium. it is more useful for all the objects of currency than a circulation entirely metallic. But to preserve to the country the fullest benefits of this convenience, such laws should be enacted as to preserve the circulation of bank paper upon a scale subject to as little fluctuation as possible, as if from any defect in the law regulating the value of coins, a considerable portion of the precious metals should at any time be withdrawn from the Province, the banks must for a while curtail their issues, and the circulating medium became so dimin- of the province so loudly calls for and not be subject ished as materially to affect all kinds of property, end to be exported either to the United States or to Great place parties to all existing contracts in an unequal Britain. To place the gold and silver coins of Great position towards each other, and a general derange- Britain at a higher value, the province would be in ment of business, must under such circumstances ensue, greatly retarding the prosperity of the country at large. its redundency would cause it to be experted at a consi-

uniform law should exist among all the British Pro-Imore bulky and of more difficult transport would find vinces, on this continent, enjoying as they do nomin-lits way into the country, but gradually and when once ally the same currency, and the passing of such a law there would remain permanently, and the remittances seems at this time more it iperative from the fact that from the Province would be made in Bills of Exchange the United States Government has recently elevated based upon the balances of its trade and thereby exthe Gold coins of foreign countries to their just com- empt from the great trouble, freight, insurance and other mercial value; and have altered the standard of their expenses attendant upon making specie remittances. own gold coinage so as to place it on an equal footing It is well understood that a state of things calling for with that of other countries. British and Portugueso an export of specie, is very injurious to its prosperity gold coins of 22 carats fineness are now legal tenders in as every sum of specie which leaves the country withparts in proportion.

The new omission at the value put on it by the United States £2 10s for the Engle and the parts in These coins possessing uniformvalue proportion. in the Province and in the United States would the in danger of leaving the country whenever the balince of trade was against us which indeed is the case renerally; therefore the main dependence must be upon coins which are made a legal tender at a rate above that which are established in the United States.

The sovereign if new and not reduced by use, will weigh 5 dwts, 3} grs. and at 94.8 cents is a tender in the United States at \$4.87 cents; it ought therefore to be valued here 24s 4d. Our chief dependence, however, must be upon British coin or a provincial coinage: if of the former, in order to command a full and steady supply of it, the current rate must be fixed too high for the United States markets, silver being already above its relative value in England, it would at first seem as it ought not to be placed in a still higher position in this province in comparison with gold than it enjoys in the mother country; but it appears to be more necessary for the convenience of circulation as change and to liquidate small contracts than gold.

I would therefore propose establishing the value of the British Crown at 6s 2d Halifax currency, being equivalent to 10 per cent, premium, and the lower denominations in proportion, as near as may be without entering into fractional parts. Or if a provincial currency is decided on, the crown and its parts could be reduced in weight so as to assimilate it to an Halifax currency thereby making it a real instance of an imaginary currency; for instance, the 5s to weigh 360

grains of standard silver,

2s 6d.....180 0 ..... 72

These weights are in proportion to the present Bripresent rate of exchange on London in this and the neighboring province is 12 to 121 per cent., and New York only 10 per cent. The rate in this province will always keep high when there is a deficiency in our exports to Great Britain. The value, therefore, of silver ought to be such as to prevent its export to Britain. Nine and ten per cent. I think should be about the rate. Either of these silver coinage would be convenient and command all the advantages the currency danger of suffering under a depreciated currency, and It would be very desirable that on this subject a derable loss, and cause fluctuations. Silver, from being the United States at 94 8-10 cents per dwt.; the Spa- draws a larger sum of credit issues, which had been nish and American silver coins being even parts of based upon that specie. Ever since the United States our pound must ever be the most convenient for use at increased the value of gold in that country, the drain the value at which they are already established by law, of specie from this Province has encreased not only The American gold coin should be established at its for the United States but, for the Lower Province resultive value of £2 13s. 4d. for the Eagle, and the also; thereby causing the Banks to import at a great expense and to curtail their issues to the injury of the From August 1824 to December 1835, Province. the exportation of gold from England was estimated at 6 millions sterling, and the general distress that followed is so well known that I need not dwell upon the disastrous effects of a drain of the precious metals,

Provious to 1816 a pound of Standard Silver in England produced at the mint 62s.; but in that year it was altered to 66s. This change produced to the Government, a gain 64 per cent. The issuing however is retained by the Government in their own hands and British silver is not a legal tender in G: Britain on sums over 4s Od. I would recommend a similar restriction here otherwise the Province may be inundated with silver.

The Government of Great Britain having a profit of 6 per cent. on their own coinage, I think they would willingly give this Province a silver coinage on the same terms, but I would recommend that it should be understood that such coinage be redeemed by the British Government when its weight is reduced by long use and the impression obliterated.

EXTRACTS

REPORT OF

THE HON. J. MONSON

Of Oswego, IN THE STATE OF NEW YORK.

That the important bearing of the proposed enactment upon the industry of our State-the elaborate discus ans had thereon-the anxiety manifested in relating to the measure—and the diversified views of of the committee, and demand their best efforts to clucidate a subject somewhat perplexed by subtleties and speculations.

They propose,

1st. To explain the distinction between capital and currency: 2nd, Describe the appropriate office of each and the laws which govern them, and allude to our Banks: 3rd, inquire into the necessity or propricty of regulating by law the hire or interest to be paid for capital. And, 1st, Capital comprises all the commodities of a country which have value, including the soil, mines, manufactories, and their products, as well as merchandize and the artificial channels, the vehicles, craft, ships, &c. which circulate it. amount of capital thus defined, owned or possessed by the citizens of this state or invesied in it, we estimate at a sum not less than 800 millions of dollars.

The valuation by the town and county assessments, including the stock of Chartered Banks, would amount to about half that sum, allowing for other corporate property not returned by them for undervalution for personal property which escapes the assessor and it is believed the above estimate is below the truth. currency of our state amounts to above 14 millions of which say 12 millions are Bank paper and 2 millions

Our currency therefore hears the proportion to our capital of 13 per cent., that is, per every 100 dollars of capital, we possess 1 & 4th dollars in currency.

## OFFICE OF CURRENCY AND THE LAWS WHICH GOVERN IT.

The office of currency is to measure capital when it changes owners or passes from producer to consumer, saving to parties the trouble of seeking out each other and exchanging their products. Thus a person possessing a commodity, and wishing to exchange it for another, first converts it to currency and with that seeks out the article which he desires to possess. rency is not an object of desire to either party except so far as it facilitates the exchange of the commodities they would part with for those they would possess, and it is always dismissed so soon as it has performed this office of measuring the value of the article exchanged and is again required to minister to the convenience

of others in the same manner.

It has been estimated by the writers of authority that one dollar of currency would exchange 5 dollars worth of commodities each year. Thus our 14 millions would exchange 70 millions annually. Although currency bears so small a proportion to capital, yet it is of the first importance that it should be well regulated, measuring capital with precision and steady uniformity, for it is this small amount of currency (one and three fourth dollars to the hundred) which stamps on capital its apparent value; we say apparent, for it does not effect its real or intrinsic value. A well regulated currency or in other words a uniform measure of capital, performs not only our domestic exchanges faithfully, but the foreign also; it regulates our exports and imports with all the precision of which such exchanges are susceptible; but a deranged currency, not only exchanges our domestic products imperfectly, but perplexes foreign trade, deranging exports and imports, and baffling the skill of the merchant in his efforts to equal- currency consists of metal alone, its cbb and flow is ize the markets of the commercial world. Thus a so gradual as never to produce agitation, unless impe-

legislators-commend it to the careful consideration | superabundant currency operates upon the capital; it measures like a short yard stick, a light weight in a small measure, while a contracted currency operates like the long stick, or the heavy weight, or the large Each extreme is alike mischievous. Abundant or degraded currency apparently swells the value of commodities, and we say houses, lands, and merchandize are dear, whereas in truth money is cheap or currency is degraded. Thus a man purchasing a farm, or merchandize at a time when currency was degraded, being too abundant and too cheap by 25 per cent, and being obliged when his payment falls due to convert the same farm or merchandize into a currency restored to its true standard value, would find to his cost that the capital which had been measured to him at \$4000 and for which he had obliged himself to pay in currency, would by the corrected and true standard be measured back at \$3000, and that he had lost by this derangement of currency 25 per cent of his estate, while the estate itself, the farm or merchandize, had neither gained or lost in its intrinsic value, but his loss had been produced by the use of a fluctuating measure or standard, a loss as fatal to him as if the estate had actually withered to two-thirds of its dimensions under his possession. The currency of a country will always be best regulated when left free to chey the impulse of commerce, unshackled and unembarrassed by legislation-such impulse will expand, contract its volume, expel it from a country when it was become abundant, and restore it again when it has become scarce - Commerce tends with all its force to equalize currency as well as all exchangeable commodities among trading communities at home and abroad; and although, like the tide it is perpetually ebbing and flowing, and never finds an exact and quiet level, yet commerce will not tolerate great inequalities in the currency of the trading world, unless thwarted by political events, or legislative enactments. It is this approach to equality of distribution which constitutes both the utility and perfection of currency.

The process of regulation is as follows-a superabandant currency at a given place becomes a degraded currency, compared with that of the rest of the world. It gives to exchangeable commodities a false value, raising the price of exportable articles until they will not pay cost and freight; then the dollar, the guinea, and the doubloon drop their character of currency or measure of value, assume that of merchandize, and take the place of the bushel of wheat, the barrel of flour, and the bale of cotton, which the Merchant rejects, and go abroad in lieu thereof to pay a debt, or in search of foreign commodities with which to gorge a market rendered voracious by this excess of currency. An equilibrium is soon restored by the four-fold operation of refusing to export the domestic products which accumulate at home, where they are useless, by superadding foreign commodities to a market already overstocked with them, and by transferring specie from a country where it is abundant and cheap, to one where it is scarce and dear. Thus money rises, commodities fall, exportation increases, importation diminishes, and the vibration thus produced is not arrested until the redundant currency has become a contracted one; commodities in their turn, become too cheap, & money too dear, and the former are sent in search of the latter

to restore again the equilibrium.

Such are the laws by which commerce and currency mutually govern and control each other, and when the currency consists of metal alone, its cbb and flow is or unwise and fickle legislation; an abundance or scar-

city is hardly felt before it is corrected.

Not so, when 12 parts of the 14 of our currency is paper, which cannot like metal assume the character of merchandize for exportation. Commerce is then compelled to make all her drafts on this small stock of metal which the banks have collected to her hands, and hold ready for banishment at the shortest notice, and at the moment commerce begins to exhaust the metal, the banks, under the influence of a panic, and in obedience to the law of self-preservation, withdraw the largest possible amount of their paper currency in the shortest period of time, until by the combined efforts of all the merchants and all the banks, a pinching and cruel dearth of currency is suddenly produced, measuring out the debtors capital to his more fortunate creditor with unrelenting extortion. It is true this severe process soon restores order and health to the commercial community, but like the tornado which replaces a postilent by a salubrious atmosphere, leaves abundant traces of its devastating march.

#### BANKING.

This important subject, which the Bank Commissioners have discussed with ability, demands from us a brief notice, from its connection with the subject

under consideration.

If our banks could be restrained to their legitimate office, of furnishing our currency, and affording a safe deposit for the idle capital of our citizens, and possessed the power of withdrawing at pleasure a portion of this currency, as it became redundant, without producing revulsions in commerce, they would fulfil the office for which they were created, and prove abunduntly useful to the public.

The Bank capital of our State amounts to about Deposits of idle capital, say................................ 10,000,000

.\$49,000,000 Together ....

Being the amount of the debt due the banks, excluding the United States branches.

If we assume that fourteen millions of currency are required to perform the exchange of our State, then banking capital to an equal amount, say, fourteen millions, it is believed, would be adequate to our wants,

and sufficient for all useful purposes.

Of these fourteen millions of capital, ten might be invested in public stocks, or permanently loaned on but all held, or pretended to be held, in a condition to bond and mortgage, while the remaining four millions redeem bank paper, if occasion should put it in requiwere held in specie; with the capital thus disposed, sition. these banks might safely exchange their credit in bank paper for good commercial bills or notes, payable at two, three and four months, and thus would the banks turnish the fourteen millions of bank currency requirnew issue of bank paper; and thus would a sum equal sudden contraction of bank currency.

ded or impelled in its progress by political convulsions, to such capital be loaned and redeemed four times each year, amounting in the aggregate to fiffy-six millions. If each 90 day loan of bank paper performed two exchanges of property before it returned in payment of the bills discounted, one hundred and twelve millions of commodities would be exchanged annually with this bank currency, a larger sum we doubt not than would require the agency of currency.

With such a reservation of specie, say four millions, and with good bills, equal in amount to the currency in circulation, and payable at the rate of more than one per cent, or one hundred and fifty-five thousand dollars per day, being about one million per week, the banks could never be embarrassed, or alarmed by any commercial revulsions, and might witness the exportations of their specie with calm indifference, knowing that a few days' receipts would be equal to any redundancy of currency they might have issued in exchange for business paper; for it will be recollected that this redundancy cannot be very excessive, when confined to such operations, and it should also be horne in mind, that the banker has to provide, in case of emergency, to redeem an amount equal to the difference between the minium and maximum of the circulation. If ten millions shall be the minium and fourteen millions the maximum, then four millions will be the most that can be thrown back upon the banks, leaving at the least ten millions suspended in circulation.

We have thus endeavoured briefly to describe strict, rigid and useful banking, a system by which the banker could contract or enlarge his business gradually, and would never under the influence of panic, diminish the currency so much and so suddenly as greatly to distress a whole community, and would possess the means in his specie and business paper, to meet all exigencies. without resort to his bond and mortgage debt, or to his. public securities, both of which would stand apart as a

safety fund for his bill holder.

If it were necessary to wind up the whole system, and abolish the banks, a single year would suffice to accomplish it, and replace their paper by specie, to the amount of fourteen millions; a year of scarcity of money and low prices to be sure, but not of severe

If it be true, as we believe, that fourteen millions of capital, and more than two-thirds of that permanently invested, can be made to sustain a currency adequate to all the wants of our populous and commercial State, a currency convertible to specie at pleasure, and exempt from frequent and excessive fluctuations; the inquiry may well be made, whether there are not defects, dangers and delusions connected with a system which pretends to have absorbed already near twice that amount of capital, and clamorously demands much more, no portion of which is permanently invested,

Not only this bank capital of twenty-five millions, but also the deposit of ten millions idle funds and the fourteen millions of bills receivable, for which bank paper has been exchanged, amounting together to ed, and would hold, in addition to their capital thus forty-nine millions, pretend to stand ready to redeem secured, fourteen millions of commercial paper, repre- at short notice, any portion of these fourteen millions, senting the exchangeable commodities of the country, or rather that portion which can require redemption, always convertible to currency, and always to be con- being the difference between the minimum and maxiverted and applied to their payment as the discounted mum circulation, say four millions. With resources bills reached maturity; every cancelling or payment apparently so ample, the call of commerce for a single to be followed by the discount of a new bill, and a million of metal produces a serious bank panic, and a made upon banking principles, to produce spontaneously for the redemption of paper half a million per day, requires a severe and protracted pressure upon it to produce two or three millions for an emergency; and if forced to yield 4 or 5 millions, a sum equal to 8 or ten per cent of the debt, such pressure is attended with wide spread ruin and general consternation.

To reconcile such apparent power with such impotent and feeble results, we are forced to the conclusion that many of the rules which ought to govern good banking are disregarded. That much of the stock, though apparently paid for, is withdrawn, and the holder's paper substituted therefor, in the same or some That much of the capital is loaned for other bank. long winded operations, as farming, ship building, long voyages, the erection of manufactories, mills, &c. That much of the discounted paper professing to be commercial, and representing commodities which can be converted to currency for the payment of the bill, is not strictly such, and that such paper, although paid at maturity, is indebted to some of the many expedients familar to commercial operations for such payment--expedients, however, which demand new loans, equal in amount to those cancelled, thus the merchant continues to be a debtor to the bank, not for a small & temporary lean in anticipation of his bills receivable, but for a large proportion of his capital; which, though borrowed temporarily, is retained, permanently, and cannot be surrendered in times of pressure without great sacrifice, if not ruin.

The committee cannot command the time or space necessary to explain intelligibly the evils resulting from the combination of so much capital with our currency, compelling them to share the fate of each other, and vainly attempting to subject them to the same laws, by which means both perform their office imperfectly;the capital but half subserves the interest of the borrower, as he holds it by a tenure so precarious as the wants and necessities of the banker-wants and necessities which are sure to press both banker and borrower at the same time, while currency is contracting and expanding by an artificial impulse, which greatly impairs its utility.

While we entertain no doubt of the solvency of our banks and their ultimate ability to redeem their currency, pay their depositors and restore their capitals to the stockholders, except in the event of a commercial convulsion, yet all this is deemed secondary in stable currency.

It is a law applicable to currency, that it increases in value as it decreases in volume, and decreases in value, as it increases in volume. Thus ten millions of value, as it increases in volume. currency would exchange a given amount of commodities as effectually as 14 millions, with this difference; them a value of about 72 millions, while the 14 millions would expand the same commodities to 100 millions; and if this was the annual amount of our exchanges, a variation of 4 millions in our currency, the difference between the extremes of a contracted or an expanded circulation would raise or depress their value by 28 millions in one year, a sum equal to twice the amount of our currency; and when we estimate the mischiefs produced by applying a fluctuating and unstable currency to such an amount of exchanges; its ther; and thus do the various branches of industry apgambling influence, unsettling prices, enriching some, impoverishing others, and embarrassing all, by balling

This debt of forty-nine millions, which ought, if and mocking their calculations, the consideration that our safety fund of a few hundred thousand dollars will protect us against an occasional loss in the currency of a broken bank, loses all its importance. Such failure and loss would be abundantly compensated, if they would teach caution to the public, and skill and prudence to the banker.

Notwithstanding bank charters have absorbed so much of our active capital, to the prejudice of long winded and permanent operations, stimulating trade and commerce almost to intoxication; notwithstanding the many villages of the interior are laid under contriaution for their last dollar to gorge with capital and stimulate to excess the favored few having bank charters, still the mania for charters threatens to swallow all our floating capital, leaving no other resource than

banks for borrowers.

It is believed that restraining banks in their discount to 6 per cent would tend to improve the character of their debt by inducing them to reject long loans and collect more rigidly. And that restraining them in their issues to the amount of their capitals, (instead of twice the amount,) would check the efforts of a part of the small country banks to extend their circulation; banks, which with limited means for redemption, and emboldened by their high credit derived from the safety fund, push their operations beyond the limit of prudence and fill up by, their circulation the vacuum, if any, left by their more cautious competitors. Such restraint might reduce the circulation of the country banks from eight millions, its present amount, to seven millions, or from about the amount of their aggregate capitals to seven-eighths of that amount, counteracting the general tendency to overload currency.

Both restraints would tend in some small degree, to check the flow of capital into the bank channel.

#### OF CAPITAL.

In discussing the subject of capital, the laws which govern it, and the interest or price paid for its use, the committee will study to avoid all allusion to currency, and when they speak of interest they are to be understood as meaning the hire of capital; by which means they hope to relieve these subjects from the perplexing obscurity which has envelloped them when capital and currency were confounded.

Capital does not expand and contract with the same importance to their duty of furnishing a uniform and elasticity, or ebb and flow with the same rapidity, as the currency by which it is measured; nor does it obey the same laws. It is the fruit of industry, skill and economy. Under a good government, and in a community well regulated, its accumulation is constant and rapid, and the lurgest accumulations are found in the oldest countries thus governed and thus regulated .the contracted standard of 10 millions would give to Its constant tendency is to flow off from these abundant and swollen fountains, and in the direction which promises the best return with the greatest security, whether that return be yielded in the shape of interest for loans, dividends on investments, commercial and manufacturing enterprises, or land speculations.

The same law which diffuses capital from fountain to rill, from an old to a new country, also requires at all points its perpetual and ceaseless change of investment, as one subject allures with more force than ano-

proach and maintain their level.

It is believed that of the eight hundred millions of

capital belonging to, and in the possession of the citizens of our state, at least four hundred millions of dollars are lent and borrowed at from four to fourteen

per cent interest per annum.

When it is considered that the bond and mortgage debt of the city of New-York exceeds forly millions; that the debt on personal security must be still larger; that our bank loans of capital, excluding currency, are between thirty and forty millions; add to these large items the debts due to foreign land-holders, as the Holland Company, the Pultney, the Parish, the Charmont and the Hornby estates, with many others of less magnitude; the three millions loaned by the Life Insurance and Trust Company, and an equal amount by the Saving's Banks; the Connecticut school fund debt, and the vast amount of foreign and domestic debt due to and from individuals; this estimate will not be deemed an exaggeration.

With a debt so vast, being equal in amount to twenty eight times our currency, and with such a propensity in our citizens to borrow and lend, it may be well to enquire whether its influence is salutary or pernicious, whether it should be tolerated or prohibited, encouraged or restrained; and to the committee it is consoling to believe, that this debt, vast as it is, produces public

benefits proportioned to its magnitude.

The committee will assume that capital cannot be too abundant in any country, or too widely diffused, provided that diffusion is gradual. To deny this proposition would be to assert that we had cultivated and stocked too many farms, had built too many houses, mills, manufactories and ships, or had accumulated too much merchandize.

## HIRE OR INTEREST OF CAPITAL.

Capital cannot be made to yield capital again, without combining with it skill and labour, nor can skill and labor he made to yield capital, (beyond the hireling or servant's pay,) without combining capital with them. Now it so happens in the wise ordering of nature, that the ability of the possessor to apply this labor and skill to the management of his capital, diminishes the ratio of the increase of such capital, and that from two causes; first from the increased labor of managing such accumulated capital, and second from the decay of physical and mental powers by the approach of age; hence the man who has acquired wealth, finds his interest in lending it, or in investing it to be loaned or managed by corporations. While every man in our community, where the field of enterprize is broad and ample, whose education, talents, occupation and skill fit him for a station above the servant or day labourer, being destitute of means, finds his interest also in borrowing, to the end that he may turn his talents and acquirements to profitable account. Even the mechanic, without a pairimony, could not avail himself of years of indented service, unless he could borrow a shop and tools; nor the student of Law are driven or restrained from the competition, and the and Medicine of their mental acquirements without money market is left with a few competitors, and their borrowed libraries, or the indigent farmer or merchant of their skill, without the borrowed farm or mer-Both parties, therefore, find a mutual interest impelling them to lend and borrow; nor does the interest of the parties conflict with that of the public, as these loans diffuse and augment capital, afford- free competition, and thus the law defeats its own being aliment for labor, and yielding to humble industry | nevolent intentions. an ample reward.

Commerce has at all times exerted a powerful and controlling influence upon the rate of interest, or price of money; and that too in spite of Legislation. Indeed, where legislation has been applied to this subject, it has followed close upon the footsteps of commercial regulation. Finding the value which trade and commerce had awarded to money, the legislator has come in with his statute, to fix and restrain it at the limits thus indicated.

But owing to the fluctuations of trade, and the ever varying wants of commerce, the price of money is never stationary. Impelled by such causes, it is always vibrating between certain limits of high and low interest. When legislation fixes the standard below the maximum to which commerce raises the price, a conflict ensues between the market and legal value; and such conflict will be mild or severe, in proportion as the legal standard is below such maximum, and in proportion to the severity of the pains and penalties

by which that standard is guarded.

Although, as before remarked, legislation has fullowed the laws of commerce in this regulation of money, and has in this manner degraded the legal standand during a period of 600 years, from 50 to 5 per cent; still, restraint has been the prominent object of legislation throughout this period, and care has always been had therefore, to keep the legal below the maximum market rate; and hence a perpetual conflict has existed between the legal and market price of money.

I do not propose to discuss elaborately the policy of the usury laws. If I could command the time required for such discussion, I would still deem it better to submit the opinions and experience of practical men, and the evidence of commercial communities.

Still, I will remark, that the policy of the usury laws originated in benevolent motives and probably at a period when commerce and manufactures were in their infancy, absorbing very little capital, and when money was hoarded by thrift to minister to prodigality, when avarice and luxury were the distinguished vices of the age. Hence the very natural prejudice against the avaricious lender, and sympathy for the careless borrower; and hence the desire to punish the one & protect the other.

The benevolent object of protecting the borrower against the extortion of the lender, however landable, is totally unattainable by legislation; and all attempts

to effect it must result in disappointment.

When the market price of money rises above the legal price, those many leaders who are unwilling to incur the hazard of penalties for usury, who are deterred by respect for the law, or the odium attaching to the violation of it, retire from the money market to participate in the profit of other investments, more honorable if not equally inviting.

Again, others who would have been induced to change their pursuits and lend money, when the price became alluring, are deterred by the same dread of encountering the usury laws; hence both these classes are driven or restrained from the competition, and the the borrower at the mercy of the most avaricious and the least conscientious of the money lenders; hence the price of money after reaching the legal rate, advances rapidly much beyond it, and remains much longer at this high rate, than it would have done with

Whatever may have been the policy in which the

over may have been the prejudices by which those most wanted, there could be no such class of men in restraints were enforced and perpetuated, that policy the community as extertionate money lenders; nor has ceased, and that projudice has been dispelled.

The various branches of industry are now pushed to their utmost limit, absorbing all the capital within their reach; nor is there any motive left for withholding this capital, the proprietors of which feel all the security which good laws can afford for their investments and their loans, nor does there longer exist in civilized communities, any proscribed sect or race who deel the necessity of hourding and concealing their gains to clude the rapacity of government.

All capital therefore is seeking the best and most profitable investment; and for this purpose, is continnally changing its employment and location as a rew employment and a new location promise better returns than the old. In this manner will capital adjust itself to the wants of the community, and spread in due propartions throughout every branch of industry, until all shall find their level, and prove equally productive, or as nearly so as it is practicable from the nature of things; provided government does not interpose its authority to disturb such natural adjustment.

A vast proportion of the capital of a country is owned by one class of the community, and used or managed by another; compensation for the use of which is made in the various modes of interest, rent, dividends, &c., - the lending or renting class are those who have inherited estates, or those who have acquired them by business pursuits, and who have become inactive from age, or whose accumulations are too large to be conveniently managed in the occupation which produced them. The borrowers are usually young, active and enterprising. A single large capital divided among this latter class, affords employment to a large number; enabling each to pay a reasonable rent or interest therefor; turn their personal services to good account, and to accumulate capital, and become lenders in their turn.

The wages of labor and the wages of capital, or the preper ions of the joint product which ought to insure to the capitalist who londs and the producer who borrows, will always be best and most equitably adjusted, without the intervention of the authority of govern-The borrower is stimulated to pay a high price for interest of money, rent of land, or the charter of a ship, by the prospect of gain, and by the competition of all others who wish to borrow, rent or charter; the person who leads, rents, or charters, is restrained in his demands by the competition of all others who wish to lend, rent, or charter.

Yet strange to tell, with a portion of the lenders, (and it is hoped for the credit of morality, a large portion,) the advance in price of money beyond the legal rate, is a signal to retire from the field of competition, withdraw their capital to seek new investments, at the moment it is most wanted, and leave the needy borrower to the mercy of the unprincipled lender, and that too, in obedience to the dictates of law, conscience and good morals. A scheme more fatal to the industry of the country, or more oppressive to the borrower, could not be devised by Legislative inge-

If therefore, the government would refrain from to retire from the competition at the moment the price these rates, not equal to their wants.

legal restraints upon money had their origin, and what- | should rise, and the influence of their competition is could money ever bring more than its actual value.

I am not aware of any single advantage resulting from restricting the price or interest of money; nor can I imagine but one reason for fixing (not restraining) by law the rate of interest at all, which is the saving to parties the trouble of such frequent negociation and

Many of the United States have endeavored to conform their standards of interest to those of the older States from which their settlers emigrated, and to guard these low standards by severe penalties; but they have, in most if not all such cases, discovered the folly of the attempt, and have abandoned it by raising tha legal standard in some cases, giving up all restraint in others, and mitigating ponulties in all; and experience has justified the change. Most of the old States have abolished or greatly mitigated the penalties which guard their usury laws.

## INTEREST IN ENGLAND.

A. D. 1255, Edward 50 per cent. I. 11. 45 do. 1307, Edward VIII. 10 do. .. 1546, Henry 1. £9 16 do. " 1604, James 1610, James da. do. 1660, Charles 1714, Anne 11. dυ.

The legal rate still 5 per cent.

A laboured investigation in England, applied to a period of the last forty years, has established the fact, that the average actual or market rate of interest for that period, was 41 per cent on securities of the highest credit in the Kingdom.

In many of the continental States of Europe, the netual rate of interest on the best security, is said to be lower than in Eugland. The legal rate throughout the Continent, varies from 4 to 6 per cent, there are few penalties to guard the legal rate, and where they do exist they are not generally respected.

Professor McNicar remarks that those penalties are generally nugatory, but if not, they " are applied only to mortgage securities, while mercantile operations, which comprehend 99-100 of the whole, are left unshackled to the mutual benefit of the parties."

In New-England as well as in Pennsylvania, and Maryland, the market rate of interest varios from 5 to 6 per cent., the latter being the legal rate.

In the City of New York it is more fluctuating, and a shade higher. The loans in that City on bond and mortgage from March 1830, to February 1831, both inclusive, amount to \$6,616,641, at an average interest of about 6 per cent. The rate of interest at which loans are made on personal security are much more fluctuating; they are often made at 4 and 5 per cent, whereas at this time 9 to 10 per cent is readily obtained on the best personal security.

In the New States of the Union, South and West, intermeddling in the price of money, interpose no the actual or market rate of interest, is generally from penalties which should induce a portion of the lenders 8 to 10 per cent; and the amount to be obtained at

#### EXTRACT FROM MR. MAYNARD'S OPINION.

As to the beliests of conscience, the moralist might, with equal propriety and justness, condemn all sales of property for less than actual value. It is also equally immoral, except so far as the law furnishes an excuse or justification, to take advantage of the scruples of conscientious men, who feel bound to obey the statute, and borrow money at the legal rate when its actual value is known to be greater. The morality of every transaction depends upon its own peculiar circumstances. It imposition be practised, or advantage taken of ignorance, necessity, or confiding credulity, the transaction will be immoral, although adjusted with precise exactness to legal requirements. practice of morality will be more extensively and powerfully encouraged by the deep and universal inculcation of its principles, than by the application of abstract, arbitrary, salutary provisions, affecting matters of business, to the infinitely diversified circumstances of human action and conditions.

Courts and individuals sometimes speak of usury laws with a sort of idolatrous veneration, as though they were of divine original or essence, the main protection of property, and the chief safeguards of civil society. One Judge has declared that they " have prevailed in all civilized countries, and in all time." Language of such bold and imposing import is apt to influence the mind without perception, and hurry it to conclusions

without conviction.

Opinions acquire from long transmission, the attributes of wisdom, and continue to command assent without investigation, because they have been embraced with unanmity. The mind fails to grasp and estiand clings to old maxims and rules long after the reas-

on for them has ceased to exist.

England has had usury laws for two hundred and fifty years; but England claims to have enjoyed tho blessings of civilization for a much longer period. that country, usury forfeits all securities contaminated with it; and her courts exercise an acute perception and ceaseless vigilance to discover it and an unsurpassed inflexibility of purpose to enforce her statutes and punish all infractions. Yet the Legislature has been compelled to interpose to protect the community from the evils apprehended from judicial construction, and more recently, has instituted an enquiry as to the practical operation and effect of those laws with a view to their modification or repeal.

In France, interest is limited to five per cent on such securities as mortgages, and six on commercial

law rendered nugatory.

In Holland, if there be any statute against usury, it is absolute, and the price of money varies with the

market.

In Hamburgh,—the common law of the German it, and enacted another, merely fixing a rate of interest empire is six per cent; but it is not applied to commercial transactions. The bill market is free. The rate of interest on accounts between morchants, is gen- gainst usury, fixing a rate of interest lower than her erally five per cent; but discount varies greatly.

Frankfort,-Five per cent on real security; but on

bills, no limit.

Bremen,-no limit.

discounts at a rate fixed, every fortnight.

Austria .- Legal rate six per cent on real estate, but on bills unlimited.

Prussia .- Five per cent on real property, but unlimited on personal security.

Trieste.-Six per cent, but on bills either legally or practically, free.

Leghorn.-Six per cent between merchants on accounts, but no law regulating interest on commercial transactions.

Genoa .- Legal rate four per cent, but left free to individual agreement.

Spain.-Six per cent between merchants, but money is free.

Portugal,-The ancient and close ally of England: has usury laws, but they are avaded by means of a

bonus or premium.

This review, comprising the most of commercial: Europe, shows by the test of actual experience, the judgment of mankind upon the policy or utility of On the continent generally statutes against usury. they are a dead letter. In some states there are none, in others they are absolute and wholly neglected, and where they do exist, the facility of evasion by means of a bonus or premium actually paid, and not forbidden, Generally they are confinrenders them inoperative. ed to mortgage securities, while mercantile operations are left unshackled to the agreement of the parties. England is the only country in Europe, where usury laws, with severe penaltics exist, or are enforced with rigor. And there, it is said, the actual price of money is greater than on the continent. In the United, States there is also much diversity of opinion. Several of the States have usury laws forfeiting the security, and subjecting the usurer to penalties, copied submate the changes wrought in the condition of mankind stantially from the English statute. Such was the law in Masachuseits, but it has been repealed, after an existence of more than forty years, and its place supplied by an Act forfeiting only treble the amount of interest exacted.

In New Hampshire and Pennsylvania, the securities are not made void, and securities for the payment of money may be purchased at any discount without incurring the penalties of usury.

In Rhode Island only the interest is forfeited, the. principal is recoverable; and the statuto is seldom if

ever enforced.

In Missouri the legal rate of interest is six per cent, but the parties, may contract for ten, and if more be oxacted the interest is forfeited.

In Illinois there is no statute regulating the price of

Kentucky adopted the English statute with all its. transactions, but by a bonus paid before hand, and not penal provisions; but has abolished it (in 1819) and forbidden, money is raised to its market value, and the substituted one fixing the rate of interest without pen-The principal and legal interest can now be recovered under any circumstance.

Ohio tried a usury statute with rigorous penalties, for twenty years, (from 1804 to 1824) then repealed

but imposing no forfeiture.

Alabama, after thirteen years trial of a statute aneighbours, Louisiana and Mississippi, changed it for one without restrictions.

This enquiry might be extended further with a similar result. It has been indulged to an extent suffi-Russia, - Legal rate six per cent; but the law con- cient to illustrate the fact, that the opinion and the stantly eyaded. The Imperial Bank at Petersburgh action of the whole civilized world, are in favor of re-

use of money.
Whatever may have been the necessity for statutes against usury at the time of their first enactment, or their immed ate use, they were made for other times and a far different condition of the world. They came into existence before commerce had produced revolutions in business and property, and in the social condition. They were not enucted to regulate transfers of negotiable paper, but existed long before promissory notes were made negotiable by statute; before distant communities learnt to increase their comforts by an interchange of commodities; when manufactures, as a great and distinct occupation were auknown; the avocations of men, few and simple, and a vast proportion of the aggreof men, few and simple, and a vast proportion of the aggregate amount of property consisting of real estate; before paper had become the representative of money, extending its capacities and performing its uses. At that period, dealers in money were few, and those chiefly belonging to a proscribed race. Religious intolerance stimulated and sustained the policy of restriction.

Indeed, the statutes against usury were a relaxation of the absurd severity of the canon law, by which all interest was forbidden. It was a relaxation extorted from bigotry by the necessities of mankind.

Usury laws owed much of the veneration they inspired and long retained, to the influence of prejudice and intolerance. The spirit of the times condemned the usurer, as it did all heretics in matters of faith. The sentiment was universal it pervaded all classes. The usurer was the object of vulgar prejudice, the proud man's contumely," and "the bigot's scorn." They called him "misbeliever, cut-throat, dog, and spit upon his Jewish Gaberdine." Acting upon the universal prejudice, and ministering to its morbid cravings, the imperial powers of the monarch of the drama were exerted to confer upon him a deathless

That prejudice has had a long transmitted dominion over the human mind. But commerce and illumination have limited its sway, and weakened its power. It is now proclaimed from the highest tribunal in the land that usury has long since lost the deep moral stain that was formerly attached to it, and is now regarded as immoral or

illegal, only because it is forbidden."

If it be innocent in the judgment of mankind, a question arises for the decision of casuists, whether the immorality consists in the practice or the prohibition?

Great changes have been wrought in opinion, and greater

still in the condition of the world.

If considerations of expediency could be tolerated, and if the question be doubtful they may be—the inquiry might well be judulged, whether it be the part of wisdom to draw tighter the cords of restriction against, the general inclination now when the spirit of enterprise is abroad, alert and vigorous, searching every recess in creation for hidden treasure, and when every part of the globe is overshadowed by the restless wings of commercial adventure; when credit is indispensible in every department of business and the transfers of negotiable paper essential to its aliment and support.

The character both of circulation and deposites is too fluctuating to authorise discounts upon them to their full amount, and probably the extension of discounts is about as great as would be prudent and the amount is about as large as the Banks could make it and keep within the limits of the law.

More than half the increase of deposits is occasioned by the accumulation of government deposites in the City of New York, which are less fluctuating, and therefore more available than ordinary individul balances.

Although the business of the Banks during the last year has been large deyond example in this State, yet their means have been extensive, busines has been active and prosperous, and we believe them, all to be in a sound, healthy and safe condition.

The demand for money occasioned by the late calamitous destruction of property in the City of New York, the encreasing probability that the commercial interests of the country may be subjected to embarrassments growing out of our foreign relations; the strong probability that in. any event a large portion of the government deposites may be drawn from New York to be expended elsewhere in the country; and the uncertainty, as yet, attending the manner, in which the branch Bank in New York is to be wound. up, are all considerations, we think, which should inspire caution on the part of the Banks, and induce them to. of the Banks subject to our supervision on the 1st instant. prepare for a different state of the money market from that

Union is supposed to be a very fair one, as they have liey. been selected probably from among the best and very large amount of small bank notes, which are soundest institutions in the country.

Their means and those of our country Banks it will be seen amount to about 43 per cent of their liabilities. of St. Laurence county, where the intercourse of the Those of the United States Bank, and the New inhabitants is chiefly with Canada, the law is entirely York city banks, to a fraction more than 50 per cent. disregarded. It is more or less so in the counties Those of all the Banks of this State to over 40 per bordering upon Vermont, in the extreme Western cent; and those of the Banks in Massachusetts to about counties and in the city of New York. It will be 28 per cent.

\$530,000. A surplus of revenue arising from it up to the 1-t of January, inclusive, amounting as we estimate it to thout 2 and 4 per cent upon the amount in the interior of the state, and the amount circulating previously paid in, is now in the treasury and we un- in the other districts alluded to bears but a small proderstand will be divided in a short time among the portion to the amount withdrawn by our banks.

Banks entitled to it.

Logislature for the suppression of the small Bank prints, a large portion of the community seem not to notes, have so for as they have yet gone into operation, occasioned as little inconvenience as was to have been expected. The effects of the change were not sensibly felt until about the 1st of September and since that time a large amount of specie has been put] imo circulation, which will be very much increased after the issues of the three dollar notes shall have ceased. As yet the Banks in the interior have found no serious difficulty in obtaining the requisite supply of specia from the cities, and most, if not all of them, have been obliged to resort there for it.

It is believed that in general the law has been very

A comparison with all the deposite Banks in the the adjoining States, which have adopted the same po-Our Canadian neighbours, however, circulate a taken as freely on the adjoining frontier of this State, as our own notes or specie. In a considerable portion found impossible we apprehend, to enforce the law of-The Bank fund now amounts to upwards of feetnally, so long as the small notes are issued by the Banks of the adjoining States.

There are but few ones and twos now circulating

Notwithstanding the discussion which this measure The measures adopted at the last session of the received in the last Legislature, and in the public have apprehended all the reasons for its adoption, and to have regarded it rather as a precautionary measure to protect bill holders against losses, than as one intended to effect more general purposes by enlarging the metallic basis, and thereby adding strength and stability to the entire currency of the country. Feeling no danger themselves, but possessing entire confidence in the ability of the banks, and finding some more inconvenience in the use of silver than small notes, when the effects of the law were first felt, they to a considerable extent regarded it with disfavour. Now, since the small silver coins have got into circufairly carried into operation, and with much loss diffi- lation and the trading community have become acculty in consequence of the co-operation of some of customed to the change, the law it is believed meets the banks, so far as we know is quite satisfactory.

The one and two dollar notes are already mostly out of circulation. The amount of Bank notes in circulation, instead of being diminished by their suppression, it has been seen has increased more than two This is undoubtedly owing to the abundance of money, the activity of business, and other causes unconnected with the measure alluded to.

One of the anticipated effects of the measure, was the enlargement of the stock of specie in the country banks, and this begins already to be apparent. The increase since the first of January last is \$148,000, and a considerable addition to the stock now possessed will be required to meet the demand to be occasioned by the withdrawel of the three dollar notes after the first of March.

It is hoped that a much larger supply of the small gold coins may be furnished by the mint in season to meet that demand. A very considerable amount of Quarter Engles has been put into circulation within the last two years, of which but very few are now to he seen either in circulation or in the banks. must be kept in small amounts by individuals into whose hands they have fallen, and until the coinage becomes large enough to make them plenty, probably cannot be expected to circulate freely.

The propriety of increasing the Banking Capital of the State, always a subject of great delicacy and importance, is rendered unusually so at this time, by the unprecedented demand upon the Legislature from all paris of the State, indicating as it would seem a strong

current of popular opinion in its favor.

The causes which have operated to produce the conviction that a very large increase of legitimate banking business, calls for this enormous addition to our Bank Capital, are truly and forcibly set forth in the Governor's Message, and they are such as are well calculated to escape the notice of those whose opportunities of observation are at all limited. An unusual press upon the Banks for discount by persons engaged in trade, while money at the same time is plenty, is naturally attributed to a corresponding increase of their business, without suggesting the inquiry whether other causes may not have contributed to withdraw from trade some of the capital which it had usually employed.

The business operations of the last year have been of the most extraordinary character both in amount and variety. Foreign exchange being in our favor, a large amount of specie has come in, the United States bank has extended its loans many millions, the government deposites have accumulated rapidly, so that moncy has been plenty and the banks have been enabled without embarrassment to sostain a line of discounts Notwithstanding exceeding that of any former year. the abundance of money produced by these circumstances, the demand for it has scarcely ever been

Immense investments have been made in stocks, in Western lands, in City and Village lots in almost every part of the State, and in real estate of every descrip-

These investments being esteemed more productive than capital at interest, have absorbed very large sums which heretofore have been, or otherwise would have been, in various ways, brought into use in aid of the Mercantile interest, or the different branches of productive industry. Agricultural productions which, for several years, have borne liberal prices, have advanced the success of such enterprises, we should not only

the public approbation much more generally, and to still further during the last season, and to an extent difficult to be accounted for by any known increase of

demand or deficiency of crops. A diminished production, in consequence of enugration; an increased demand for consumption upon works of internal improvement and in the manufacturing establishments, may have had some influence upon their prices, and it would be gratifying to feel assured, beyond all question, that they have not been influenced by a redundant currency. It is natural that the price of lands should advance as the productions of agriculture appreciate in value, and quite as natural that whenon the advance excitement should operate to speed its velocity towards the point of reaction. Looking at the immense operations to which we have alluded, altogether unprecedented both in variety and amount, it is difficult to resist the impression that much has been the result of excitement. Excitement upon such subjects is difficult to be avoided, even by the more prudent and calculating part of the community. He who stands by and witnesses the profits realized by a single operation, equalling perhaps the accumulations of his whole life of industry and perseverance, and witnesses such operations not occasionally only, but as familiar every day occurrences, must possess an unusual indifference to gain, or an exceedingly well balanced mind, not to be affected by the mania for specula-

Operations of this kind, particularly in City and Village lots to be occupied, perhaps, by the next gencration, and the value of which of course is entirely imaginary, have been so common of late, as to have engaged much of the public attention, and become

matters of notoriety.

The existence of an adventurous spirit of speculation is injurious to the community at large, as unsettling the relative value of property, inducing improvident investments of capital which might be otherwise usefully employed in the pursuits of industry, but more especially injurious in its influence upon the industri-

ous habits of business men.

The minds of the young particularly, who are just entering upon business, are perverted by this sudden though hazardous means of obtaining wealth from the more sur and steady pursuits of industry and economy, which administer so largely to the comfort, quiet and order of society. Rapidity in the accumulation of wealth, (however desired by all,) almost invariably leads to extravagance in its expenditure, with the attendant and contagious evil of its example.

The banks, it is believed, have not been the volunlary instruments of encouraging the excitement for speculation; but yet it cannot be doubted that much actual capital has been withdrawn from ordinary business, to carry on these speculations, and its place supplied by credits at the banks, of an actual or supposed

business character.

It surely cannot be a cause of complaint that individuals possessing capital should invest it in Government lands at the West, or in lands or lots within the State, or elsewhere, for the purpose of realizing the best profits they can; indeed we may safely calculate upon speedy and rich returns from the capital invested in the productive regions of the West. But if an excited spirit of speculation is abroad, and requires to be fed with an extravagant increase of banks, all will agree that if it were desirable to sustain or encourage its enterprises, this is not the appropriate means of effeeting the object. By connecting the currency with give fresh impulse to the excitement, but expose the ity, in consequence of its new and immense resources, whole community to the disastrous consequences of a which are daily developing, that no human mind can revulsion.

On the other hand, to whatever extent capital formerly invested upon interest, and directly or indirectly employed in trade, may have been withdrawn in consequence of the prospect of a more productive investment elsewhere, (and in reference to the enquiry under consideration it is quite immaterial whether such investment may be judicious or not,) a new credit would seen; to be required, in order to sustain the interests of trade, and to that extent a recourse to the banks appears natural and proper.

For although the creation of Lanks creates no new capital, yet banks do furnish to the community, beyoud the amount of their capital, a credit which answers the purposes of capital to men in business.

They also distribute capital in their neighborhoods drawn by means of their stock from other places and other investments, and locally, therefore, produce an actual increase of capital.

In so far, therefore, as the mercantile or manufacturing interests may demand an enlargement of the banking capital to supply the place of capital recently withdrawn from their use, and permanently invested elsewhere, we do not perceive why the application is not a fair one, unless it be conceded that we had too much before.

So also in regard to the increase required to meet the constantly growing demands of business.

Such considerations, however, from their nature, appreximate but little towards any definite rule of action upon the subject. In this country every thing in the way of business progresses with such astonishing rapid-

ity, in consequence of its new and immense resources, which are daily developing, that no human mind can undertake to measure the amount of currency which may be sufficient for our wants, and yet not sufficient to derange the value of property. Banking with us is an experiment, in a great measure unknown to the rest of the world, and we should therefore proceed with caution as the lights of experience may guide us.

The question is, how far is it safe to extend this system of credit?

Upon any rational calculation which we are capable of making, we cannot believe that the amount of additional bank capital actually required, and which might be safely granted, bears any respectable proportion to the amount petitioned for. But yet we do believe that some additional bank capital is required and may safuly be granted.

In our estimates upon this subject it should be borne in mind, that besides the direct increase of banking capital which has been made within the last few years, there has also been an indirect increase by the accunulation of conal fund money's in the hands of the banks, by the government deposits, &c.

The possession of these funds has enlarged the ability of the banks to discount as upon nearly so much additional capital, and it is only by the use of them now, that the banks are enabled to sustain the large amount of their discounts.

The following table will show the progressive increase of capital, other means and business of the safety fund banks, for the last four years, by which it appears that their loans to the community during that period have almost doubled.

#### PROGRESSIVE INCREASE OF CAPITAL IN THE SAFETY FUND BANKS.

We have heretofore expressed the opinion that in the distribution of Bank Capital, the public interest would be better promoted in most instances, by energasing the capitals of existing Banks, than by the creation of new ones.

The reasons for that opinion are given in our Report of 1834, and we think they apply with peculiar force at this time. It is Capital that is now wanted, not Carrency. The circulation of the Banks is now much larger than usual, which shows that money is plenty, although capital may be wanted, and certainly is in demand.

It can be furnished to the community with a less increase of circulation by enlarging the present than by establishing

more Banks.

In the city of New-York, where we think more capital is required, we should esteem it desirable to enlarge the capitals of the smallest class of Banks, as well as to raise some of the others up to the highest class.

In the country there are some few instances in which new Banks would better accommodate the public, (without being particularly objectionable in other respects.) than an increase of existing capitals, although generally we should think otherwise.

The \$100,000 cipitals we have always considered too small, and within a suitable time, should deem it desirable to have them encreased, as well for the purpose of afford-

ing more security for the liabilities, as more accommodation to the public.

If any new bank capital should be authorised, it will be important to have it taken by individuals who possess actual capital to invest, without raising it upon the credit of the stock itself, as we have found has sometimes been done.

The law now requires the capital to be actually paid in and there can be no hardship in requiring the money to be raised without pledging the stock upon which it is paid.

This may be accomplished by a provision prohibiting the hypothecation of the stock for any purpose whatever, say for one year after the original issue of the certificate; and in our epinion it would be a wise and salutary provision.

We also suggested in our report of last year, the propriety of prohibiting all the banks from receiving hypothecations of the stocks of other banks, and subsequent observation and reflection have confirmed the impression the entertained, that such a provision would be salutary in its influence, without being justly considered as oppressive either upon the banks or upon the holders of such stocks.

Respectfully submitted,
C. S'PEBBINS,
GEQ. R. DAVIS,
LEWIS EATON.

Albany, Jan. 23d, 1836.

## SELECT COMMITTEE ON FINANCE,

ON THE SUBJECT OF THE

## POST OFFICE DEPARTMENT.

To the Honorable the House of Assembly.

The Committee on Finance respectfully submit to the House the annexed copy of a report from the Special Committee of the House of Assembly of Lower Canada, on the state of the Post Office Department in Upper and Lower Canada, together with copies of certain accounts.

These documents contain much useful information on the important subject to which they have reference.

All which is respectfully submitted.

CHARLES DUNCOMBE,

Chairman.

Committee Room, House of Assembly, 29th March, 1836.

RETURN of unpaid letters received from England for the years 1828, 1829, 1830, 1831, 1832, 1833 and 1834, and charged in British Sterling.

T. A. STAYNER,

Deputy Post Maner General.

Second Report of the Special Committee appointed to inquire into the present condition of the Post Office Department, with a view to the application of an efficient remedy to the defects in its organization and management.

Your Committee directed their attention at an early period of the session to the Financial affairs of the department, its receipts and expenditure, and the manner in which the surplus revenue was disposed of.

Your Committee have examined at great length the Deputy Post Master General, and called for various statements, returns, documents, and correspondence which, with the evidence taken by your Committee, will be found appended to this report

The great number, and still incomplete state of these accounts have, as yet, prevented your Committee coming to a satisfactory conclusion on the voluminous papers connected with the finances of the department, which have been laid before them.

Sufficient data have, however, been obtained to convince them that the Post Office Department in the Cunadas has been made a source of revenue to Great Britain, large sums having been annually remitted by the Deputy Post Master General to the General Post Office, London. For the thirteen years ending 1834, inclusive, the enormous sum of £91,685 8 8 sterling, has been transmitted to England by the Post Office of this Province. The average remittance of the last four years being £10,041 13 4 sterling per annum.

Your Committee would be wanting in their duty to your Honorable House and to the people of this Province, did they not take the first opportunity loudly to protest against this illegal violation of the plainest principles of constitutional law, and the fundamental rights of the good people of this colony. However the circumstances of the case may have originally necessitated the levying of this taxvious to the establishment of a representative form of Government in this Province, from the moment such form of government was established therein, the surplus derived from this source of revenue ought to have been immediately placed at the disposal, and under the control of, the people's Representatives, in conformity with one of the important and indisputable birth-rights of British subjects, which were more peculiarly acknowledged and confirmed to colonies having local Legislatures by the faith and honour of the British Parliament, pledged by the declaratory act of one thousand seven hundred and seventy-eight, the violation of which principle has already cost Great Britain so dear in the dismember-ment of the Empire, and the loss of the former

British colonies, now the flourishing and happy United States of America.

By the act passed in the fourth year of His present Majesty's reign, chap. 17, His Majesty's Government virtually admit the making of such remittances to be unconstitutional, and a violation of the rights of the subject. Your Committee were, therefore, induced to hope that such practice would at least have been discontinued by the Deputy Post Master General, after he had become cognizant of the views of His Majesty's Government, as he evinced in that act. So far, however, from respecting the rights of your Honorable House, and of the people of this Province, your Committee perceive that that officieer still continues to make these remittances.

At an early date, when your Committee learned that the Deputy Post Master General had already made a large remittance on account of the last year, 1835, they gave that officer to understand that very probably your Honorable House would hold him personally responsible for any further remittances he might make to the General Post Office in England, out of the Pest Office revenues collected in this Province. so far from respecting that warning, that officer immediately after, as your Committee learn by statements furnished within the last few days; paid into the Commissariat office at Quebec, to be forwarded to England, twenty thousand dollars. The sums thus remitted by that officer to England, for the three quarters ending 5th October, 1835, from the Post Office revenue collected by him in both Canadas,

amount, as per minute in the margin, to the large sum of thirty-three thousand dollars, e-

The people of both the Canadas have, even by the admission of the Deputy Post Master General, been "clamorous" in their demands for new Post Offices and increased Post Office accommodation. That officer, although informed of these demands, has hitherto on various pretexts neglected to comply with them. On the contrary he appears to consider one of the principal duties of his office to be to ren der the department, in these provinces, as profitable a source of revenue as possible to the parent state, & to consider the accommodation of their inhabitants a matter of secondary consideration. Under all the circumstances of the case, then, your Committee respectfully suggest to your Honorable House the necessity of taking immediate steps to put a stop to this unconstitutional and illegal practice, and recommend the Deputy Post Master General be held personally responsible for any further remittances which he might make to England from the Post Office revenue of this Province.

By the Statements laid before your Committee, the Gross Receipts of the Department in the Canadas, appear to have been for the three last years as follows:—

In Upper Canada,	1832,	1833,	1834,
Postage on Letters,	£14,008 10 5 1,335 19 11	16;509 13 6 1,433 9 7	17,679 14 11 1,230 11 5
	15,344 10 4	17,943 3 1	18,910 6 4

			,
In Lower Canada,	1832,	1633,	1834,
Postage on Letters,	£13,735 15 3 739 19 11	13,427 13 2 833 6 2	13,332 3 5 852 16 G
	14,462 15 2	14,260 19 4	14,185 19 11
Total Gross Receipts for both the Canadas, C'y	30,807 5 4	32,214 2 5	33,096 6 3

The following is stated as the Amount of Postage paid by Provincial Newspaper Printers for transmitting their Papers through the Post Office:—

	18	32,		18	33,		٠.,	1	834,	,
In Upper Canada,		7 1	4 8	1,121 592		7 10		554 622		
Total	€ 1,440	9	0	1,713	7	5	-	1,197	3	10

Your Committee cannot say whether these sums are included in the items above mentioned, under the head "Newspapers and Pamphlets." The whole of the Expenditure in both Provinces for Salaries, Contingencies, Transport of Mails, for the above years, appears to be as follows:—

	1832,	1833,	1834,
Deputy Post Master General's Income, Salaries to Post Masters, U. C do. in Lower Canada, Transport of Mails, Contingencies	3,719 12 7 2,048 8 8 8,642 14 0½	3,311 4 3 4,428 10 9 2,162 2 0 9,895 15 11 887 0 01	3,121 13 3 4,732 8 4 2,526 12 101 11,203 6 0 1,874 7 21
$ \mathcal{L} $	18,474 12 2	20,684 12 111	23,458 7 8

From the above Statement it would appear that the Receipts of the Post Office Department in the Canadas exceed the expenditure by the following amount:—

	1832,	1833,	1834,
 Excess Currency, &	11,322 13 4	11,529 9 64	9,537 18 7

Since procuring the Returns, upon which the above Statements are founded, your Committee have called for and procured copies of the Annual Returns of the state of the Post Office Department in the Canadas, made by the Deputy Post Master General to the General Post Office, England, for the above years, from which they have compiled the following comparative Statement of Receipts and Expenditures for the same years, (Currency).

	1832,	1833,	1834,
Gross Revenue to 5th April,	€25,571 14 G	30,594 15 3	30,632 3 0
Expenditure, Salaries,	7,746 5 5 1,928 18 5	4,834 1 10½ 9,010 17 0½ 1,313 0 8½ 1,356 11 9½	5,467 15 9 10,371 0 4½ 1,004 13 3½ 1,528 13 5
	14,566 6 4	16,514 11 5	18,372 2 10
Balance	11,005 8 2	14,080 3 10	11,260 0 2
Balance remitted to England, et	19,000 0 0	12,000 0 0	11,250 0 0

Although the Items and Balances in the above Returns do not agree, it is evident that large sums notwithstanding, remain, after the expenses of the Department are paid. Taking for granted that these shewn by the Deputy Post Master's Annual Returns are correct, the following will be found to be the nett proceeds of the Department for the above three years, after deducting the British Packet Postage due on Letters received from England by the Falmouth Mails:—

	1832,
Balanco of Revenue,	11,005 8 2 14,080 3 10 11,260 0 2 1,619 19 10 1,680 4 0 1,731 3 4
Nett proceeds of the Post Office Department in the Canadas,	9,395 8 4 12,399 19 10 9,628 16 10

Your Committee have been extremly desirous to separate the Accounts of Upper and Lower Canada from each other, in order to determine what is the Nett Amount of Post Office Revenue belonging to each Province, after their separate expenses are paid. To get at this information, your Committee called on the Deputy Post Master General to compile and furnish them with an Annual Debit and Credit Account in detail, of the Receipts and Expenditure of the Post Office Department in Lower Canada, for the years 1832, 1833, 1834. Which Statements show a yearly Surplus Revenue from that Department in each Province as follows:—

	1932, 1833, 1834,
•	£5,405 18 1   6,216 14 1   5,591 19 11
Lower Canada,	£6,407 1 3 5,765 15 111 4,539 18 81

Whatever balances accrue are disposed of by remittance to the General Post Office, London.

These balances would be still larger had stricter economy been observed in the Department, and had the Officer at its head in these Provinces not illegally and improperly applied to his own private use and advantage large sums of the Public Revenue, to which he had no right. From the Returns furnished by that Officer of his various emoluments, it appears that he has received and appropriated to his own use in the course of little more than six years, ending 1834, no less a sum than £9,550 5s. 2d. currency, which sum was paid for the transmission of Newspapers, Pamphlets, and other printed papers, through the Post Office. The appropriation of these proceeds to his own private emolument, the Deputy Post Master General states, has been made under a privi-lege recognized by the Post Master General since the earliest introduction of the Post Office system in the British Provinces, "but," as it already has been well observed by a Committee of your Honorable House, appointed in the Session of 1831-2, to inquire into the management of the Post Office Department in this Province, "this assertion is at total variance with a Return dated so late as 5th July, 1827, laid before the House of Commons by the Secretary of the General Post Office Department, London, in which it is stated the fees, if any, being unknown in this Office, are not taken into the above Account." From this it is evident that the appropriation by the Deputy Post Master General to his own profit of the proceeds derived from the forwarding Newspapers by Mail, was a circumstance unknown to the Post Master General in England, at the date of the above Return. In the absence of any law, your Committee cannot consider any sanction of the Secretary of the General Post Office sufficient to authorise the Deputy Post Master General to appropriate such proceeds to his own use. The only other authority produced by the Officer in question to support this appropriation, is the following Section of the Imperial Act 4th Geo. III, Chap. 24, Section 6, Anno 1763.

"And for as much as it hath been usual for the Clerks in the Offices of His Majesty's Principal

"Secretaries of State, and also for certain Officers of "His Majesty's Post Master General, to frank printed ed votes and proceedings in Parliament, and printinewspapers, to be sent by the Post.; be it therewspapers, to be sent by the Post.; be it therewspapers, to be sent by the Post.; be it therewspapers, to be sent by the Post.; be it therewspapers, to be sent by the Post.; be it therewspapers alone for enacted by the Majesty's Post. Said, being thereunto licensed by His Majesty's Post. Principal Secretary of State or His Majesty's Post. Master General respectively to continue to frank such printed votes and proceedings in Parliament, and printed newspapers, in such manner as they have heretofore been accustomed to frank the same; Provided that such printed votes, proceedings, and newspapers shall be sent without covers, or in covers open at the sides."

The act from which the above section is taken, it is worthy of remark, was passed to prevent frauds-and abuses in relation to the sending and receiving of letters and packets free from the duty of postage. It provides, among other things, that "all letters and packets directed (among other Officers) to the Deputy of the Post Master General for His Majesty's dominions in America, shall be exempt from postage."
This is all in the above Act which has reference to the Post Office in His Majesty's dominions in America. In no part of the act is there the least shadow of authority to empower the Deputy Post Master General to fix a rate of postage on newspapers in those dominions, or to appropriate the same to his own use. Granting for a moment that a postage ought to be paid by Printers for the transmission of their papers, your Committee consider it a monstrous absurdity that the head of the Department should, in the absence of all law, & to the great injury of the Revenue, presume to fix that rate, and to appropriate to his own private profit, emolument, and advantage, the proceeds. The Deputy Post Master General contributes no part of the expense incurred for the transmission of those papers. The Province pays the whole. Yet in the face of these facts, the Officer in question not only continues, but has given your Committee to understand that he will continue to exact the above postage, and to appropriate it to his own private use as heretofore.

The section of the act of 1763 cited by the Deputy Post Master General in support of this gross fraud and abuse; in the opinion of your Committee, is not of the slightest authority in the case, as the Deputy Post Master General in this Prouince does not come under either of these descriptions of Officers, not being a Clerk in the Office of the Secretary of State, nor a Clerk in the Office of the Post Master General, and the Imperial Parliament would certainly never have meant to act so absurdly as to give to certain Clerks in the Office of the Post Master General so lucrative a monopoly as the whole proceeds of newspaper postage collected in the United Kingdom, were the newspaper printers obliged, as they are in this Province, to pay a certain annual sum for having their papers transmitted by mail.

The Deputy Post Master General would pretend that the large sums of the public Revenue which he thus disposes to his own personal advantage are a quantum meruit which he receives for certain services which he renders them. But your Committee would respectfully submit that this reasoning is perfeetly fullacious, since it is not the Deputy Post Master General, but the Province which defrays the expenses of transporting and conveying the said newspapers, and of receiving and delivering them at the Post Offices. The money paid to Contractors for carrying the mails, and the salaries and remuneration of the respective Post Masters and their Assistants & Clerks, are paid from the gross receipts from Letter Postage. The Deputy Post Master General contributes none of the expences for the transport of the mails, nor of the salaries to the Post Musters or their Assistants. The public revenue is therefore taxed for his private advantage, a fact which is established beyond a doubt by the evidence of the Contractor who forwards the mail between Quebec and Montreal, who admits that the Province is charged an extra sum of £200 a year for the transportat of newspapers on this route alone.

The amount which the Deputy Post Master General acknowledges to have received from this source for the last three years was as follows:—

1832	1833	1834
£1841 9 10	£2005 17 0	£1863 1 1

being on an average £1906 16 2 Currency per annum, a sum which falls short only £400 of what is now paid for the transport of the mail from Quebec to Kingston in Upper Canada five and six times a week, a distance of 379 miles.

Under all these circumstances your Committee consider that the Deputy Post Master General had no right to appropriate to his own private advantage the sums received for the transmission of newspapers and other printed papers by mail in these Provinces, and respectfully suggest that legal means be taken to oblige that officer to reimburse the said sum of £9950 5 2 Currency, which he exacted and appropriated to his own use. The said sum when recovered, to be divided in a proper proportion between Upper and Lower Canada; that he be obliged for the future to abstain from such practices, and to pay into the general fund the nett sum received from newspaper printers, and for the transmission of news-

papers per post, after deducting the Post Masters' per centuge; which general fund ought to be expended, after the necessary expenses are paid in extending Post Office accommodation in these Provinces, instead of being remitted to England, as is the case.

Your Committee having already by bill for the regulation of the Post office in this Province given their opinion us to the sum which ought to be allowed as the salary and sole remuneration of the person at the head of the Department, recommend that proper means be taken, in the event of that bill not becoming Law, to limit the salary and annual compensation of that officer within the bounds which your Honorable House determined in sanctioning that bill. The amount which he derives at present from his office is beyond all just proportion to the services per-formed. He has received on an average of the three years ending 1834 £3185 5s. 2d. per annum, a sum nearly equal to that allowed to His Excellency the Governor in Chief-three times more than the salary of any of the Puisno Judges in the province—almost equal to the whole amount paid to all the Post Masters in Upper Canada put together, and a third more than the allowances received by all the Post Musters in this province. The disproportion of the Deputy Post Master General's emoluments will be more evident, when it is considered that he has moreover in the General Post Office, to assist him in the performance of the duties of his office, one Clerk at £150 sterling per annum—an accountant at £300 sterling per annum—two Clerks to ditto (one of whom £150 sterling per annum and the other £100 sterling) and a Messenger.

This Establishment, in the opinion of your committee, is more than necessary for the wants of the Department, and ought to be reduced to the scale provided in the bill passed by your Honorable House. It was formed originally by the Post Master General, under the impression that the Post Office bill; for the British North American provinces, which was prepared in England and submitted to the respective Legislatures by Mr. Secretary Rice, would have met the approbation of these Legislatures.

By that bill the Post Office of all these Colonies was to be under one head at Quebec, and, to prepare for the great increase of business consequent upon such a change, the establishment of the General Post Office at Quebec was increased. As it is now certain that all the colonies will never concur in the proposed consolidation measure, the Quebec establishment ought to be reduced to the scale above proposed .-The Accountant branch is moreover, in the opinion of your committee, altogether inadequate to the purposes for which its establishment was intended, the Accountant being dependent in a great degree on the good will of the Deputy Post Master General for his continuance in office. Under these circumstances no proper cheque can be expected. Your committee have in the course of their enquiry learnt that the Post Master at Quebec is at the same time Gentleman Usher of the Black Rod to the Legislative Council. These two situations are, in the opinion of your committee, perfectly incompatible. They therefore recommend that the Post Master at Quebec be called on to choose between these two situations, the public service requiring that the Post Master be in constant attendance at his office to superintend the responsible and important duties thereof.

Your committee have next to call the attention of your Honorable House to the gross discrepancies between the Return made to your committee and that made to the Provincial Government, as stated in the Blue Book by the Deputy Postmaster General, of his salary and emolument of office. Your Honorable House will be better able to judge of the ex-

tent to which that officer has deceived the King's Government by an examination of the following comparative statement from Returns laid before your committee and those furnished by Mr. Stayner for the Blue Book for the years 1831, 1832, 1833, and 1834.

## Annual Salary and Emoluments of the Deputy Post Master General.

Years.		From Statements furnished to the Committee-	From Blue Book.	Remarks.
	1831	£2,610 12 2½ Currency,	£500 0 0 Sterling,	No return of Fees, supposed
	1832 1833 1834	3,122 19 01 " 3,311 4 31 " 3,121 17 8 "	500 0 0 " 500 0 0 " 500 0 0 "	to be considerable. ditto. ditto. No Fees.

In the Blue Books for the years 1831, 1832, and 1833, to the question whether "he enjoy any and what other profit or advantage not required to be stated in the preceding columns," the word "none" is opposite Mr. Stayner's name. The following note, however, is at the foot of the page :- "£200 per annum is allowed to the Deputy Post Master "General for an Assistant in his office; his Fees are "derived from Printers, who pay him for their papers sent through the Post Office and distributed by his Deputies." The amount of these Fees, your Committee would however remark, is not furnished, neither is there any mention of the commission on U. States Postage, which he receives, and which amounts on an average of the last three years to £478 5s. 2d per annum. In the Return sent in for the Blue Book for the year 1834, (a copy of which will be found in the Appendix of this Report), Mr. Stayner states that he receives "no Fees," and in answer to the query whether he enjoys any or what other advantage or profit, he states that "I possess the privilege of sending certain description of Newspapers through the Posts in the British American Provinces.— "The profit derived from this source I have not at " present the means of computing for the year 1834. "I have received at the rate of £200 a year for "Assistants, up to the 5th October, 1834."

It is evident from these several extracts from the returns furnished by the Deputy Post Master General for the information of His Majesty's Government that this officer, by withholding the full and correct information required, has deceived the King's Government as to the extent and amount of his emoluments of office.

In thoroughly investigating the affairs of this Department, the labours of your Committee have been much impeded by the carelessness of which some of the officers of the Department have been guilty, in regard to the regular keeping of books. Mr. Sutherland, the predecessor of the present Deputy Post Master General, your committee is informed "kept" no books of account whatevever" and certain statements which have been furnished to your Committee are imperfect, owing to the circumstance that

"the books of mails received, kept by the late Post "Master at Quebec (Bignell) for certain periods, cannot be found." Similar carelessness on the part of the Post Master at Montreal, prior to July 1828, seems to have prevailed.

Your Committee would suggest that the books of the several offices should be for the future considered the property of the Department, and not of the person in charge, and that the books be, on a change of officers handed over to the head of the Department, and a proper receipt taken for the same.

Your Committee directed much of their attention to the present state of the Post Office accommodation in this Province, and the further extension thereof, as required by the wants and numbers of the population. The number of Post Offices in both the Canadas, in the years

	1831	1832	1833	1834
Were as follows:	151	C 109	251	254
Of these there were	in L		118	117

In order to ascertain the number of the new Post Offices required in this Province, your Committee addressed circulars to the several members of your Honourable House, from whose answers they have compiled several tables. The immediate establishment of a large number of new Post Offices is immediately required in this province for the public accommodation in the following places:

In Ancienne Lorette, in the county of Quebec.

In St. Augustin, Pointe Aux Trembles Sté. Cathararine de Forsambault, Les Ecurouils, Deschambault, and Grondines, in the County of Portneuf.

In Batiscan & Champlain in the county of Champlain.

In Pointe du L. County of St. Maurice.

In Maskinonge, Lanovaye, Sre Maclanie, and Lavattrie, in the County of Berthier.

In Lachenaye and Hépentigny, (Bout de l'Isle) County of Lachenaye.

In Point aux Trembles, St. Laurett, Pault aux Recollets, and Ste. Geneviève County of Montreal.

In St. Martin. St. Vincent de Paule and Ste Therese, in the County of Terrobonne.

The greater number of these offices may readily be established without incurring any additional expense, the places for which they are required being, with the exception of those in Gaspé and Bonaventure, or in the neighborhood of post roads already The degree of neglect in the Deputy established. Post Master General to extend Post Office accommodation may be at once perceived from the fact that only eight Post Offices have been established along the Grand Mail route between Quebec and Montreal, although there are a great many old and flourishing Villages between these two Cities through which the mail passes at present ten times a week. Honorable House ought to insist that Post Offices be established furthwith in each of the Villages above mentioned, and also that mails be transmitted along the South shore of the River St. Lawrence above and below Quebec more than once a week. The Island of Montreal and the settlements on the banks of the Ottawa, and to the North of that River require additional mails, and in many places new Post Ollices.

Your Committee consider it particularly their duty to call the attention of Your Honorable House to the condition of the District of Gaspé, which is and has always been in a manner altogether destitute of Post Office accommodation. From the answers of the Members of that District, it appears that there are but two Post Offices in the whole of the County of the remedy proposed.

Gaspé and but very sew in the County of Bonaventure. The Deputy Post Master General ascribes the cause to the impassible state of the road between Mitis and the Ristigouche River (Baie des Chalcurs) in consequence of which letters addressed for Gaspé are now sent through New Brunswick. No mails are made up regularly at Quebec for Gaspé at present. The correspondence between that, as well as the greater part of the adjoining County with the other parts of the Province is thus very much impeded.

Your Committee perceiving that the Permanent Committee on roads have, in their second Report now under the consideration of your Honorable House, recommended the grant of a sum of money to improve and complete the road from Mitis to the Ristigouche, and an additional sum for the maintenance of certain posts for the relief of travellers on the same line, will abstain from making any remarks on this subject.

By reference to the statement hereunto annexed, a list will be found of various applications which have been made to the Deputy Post Master General since his return from England, for the establishment of new Post Offices in this Province. Several of these applications, your Committee regret, have not as yet been attended to by that Officer, and much complaint had in consequence been created. In a letter addressed by that Officer to the Secretary of the General Post Office, England, dated 15th March 1835, he gives it as his opinion that the Provinces of Upper and Lower Canada would require at this time not less than 500 new Post Offices, and that in ten years hence they will need a thousand at least. " He complains, however, that being situated from 500 to 1000 miles from the source of application, he cannot do justice to the consideration of the questions arising from the numerous applications for increased Post Office accommodation with which his desk is cov-This acknowledgement on the part of the head of the Post Office Department in these Provinces, together with the knowldge of the fact that Upper Canada would insist on a separate Post Office establishment independent of the other Provinces, under the idrection & control of a local Provincial Post Master General, and other weighty reasons which it is unnecessary now to detail, induced your Committee to recommend a distinct Post Office establishment under the control and management of a local Provincial Post Master General also for this Province, which arrangement was provided for in the Bill which your Committee had the honor to submit for the consideration of, and which was approved by your Honorable House. It only remains, therefore, for your Committee to hope that the said Bill will meet with the approbation of the other branches of the Legis-

Your Committee have likewise turned their attention to the loss experienced by the revenue by their present practice of sending letters by the Steam Boats during the season of the navigation between Quebec and Montreal. That loss is calculated to amount to at least £2,500 per annum. Your Honorable House having in the Post Office Bill litely passed, provided remedy, as far as it was in your power, to this great loss to the revenue, the responsibility of such loss, if that Bill do not become law, must fall upon that branch of the Legislature which refuses to sanction the remedy proposed.

## UNITED STATES' POSTAGE.

The following statement drawn up by your Committee shews the amount of United States' Postage collected in the Canadas for the three years ending 1834, and the compensation derived from collecting the same, and the Deputy Post Master General's proportion of the latter.

	1832,		1833,		1834,	
	Amount collected.	Compensation paid for collection.	Amount collected.	Compensa- tion paid for collection.	Amount collected.	Compensa- tion paid for collection.
In Lower Canada, In Upper Canada,	\$11223 13 9771 30	\$2386 03 2442 82	\$12271 92 13121 09	\$2476 84 <u>1</u> 3280 27	\$12737 81 16751 94	\$2516 38 4187 98
Total, \$	20,994 43	4,828 85	25,393 01	6,757 11 <u>1</u>	29,489 75	7,704 36
Deputy Post Master General's share,		1.881 20		1,976 90		2,013 10

The sums of money irrecoverably lost in transmission through the Post in the Canadas from January 1833 to October 1835, amount to nearly £700. Your Committee having made a special report already on this head, abstain from making any further remark than to recommend that the Deputy Post Muster General may make the proper arrangements to prevent the recurrence of similar losses to the public

It was the intention of your Committee to have laid before your Honorable House a series of statistical information as to the number of sheets of United States papers received therein. With this view they caused circulars to be addressed to the several newspaper printers and Post Masters in both Provinces, who were requested to reply to the Queries addressed to them by order of your Committee.

The interesting object your Committee had in view has, they regret to say, been entirely frustra-ted by the unwillingness and refusal of many of those to whom the circulars were addressed, to give the full information which your Committee de sired to obtain. It is to be hoped, however, that when this subject is again taken up, the inquiry will meet with a more favorable result.

In the course of their inquiry your Committee referred, as in duty bound, to the Reports of, and the Evidence taken by preceding Committees of your Honorable Honse, relative to the Post Office Department, and have been much struck with the pertinacity with which the Deputy Post Master General refused to give those Committees any information relative to the finances of the Department and the amount of his emoluments. They must remark that much of their labor and trouble would have been spared had that Officer given the information which was required from him frankly and honestly, as he ought to have done, instead of having recourse to mystery and concealment, which could only excite suspicions to his disparagement. From

your Committee, it appears that previous to being called before the Committee of your Honorable House in 1831, Mr. Stayner pre-determined to with-hold every information of any value relative to his Department, which he expected might be demanded of him by the Committee. In order to he supported in this improper determination he waited on the late Governor in Chief, as appears by a letter dated 15th June, 1831, which he addressed to the Secretary of the Post Office, "to solicit His Lordship's advice." His Lordship, he states, concurred with him in the view which he had taken beforehand, and the requisite information was withheld. He then goes on to the end-" I therefore chose rather to incur the risk " of displeasing the Provincial Parliament than to be " an instrument of giving trouble to those authorities "to whom I consider my first duties are engaged." A rather strange contradiction, with the proffessions of the Deputy Post Master General a few months before, when he stated that "his ambition was to put the "Department on such a footing as would ensure to him the public approbation here." The acts of the Deputy Post Master General are the best commentary on these proffessions. On the 29th December, 1835, he told your Committee that he conceived it his duty to afford to all parts of the Province Post accommodation, to the extent of the funds at his disposal. How did he dipose of those funds? On the 23th of February following, he remitted eight thousand dollars to England. In the letter above mentioned to the head of the Department in England, the Deputy Post Master General permits himself to make some unjust reflections on the Committee of 1831, and to accuse them of suppressing "some very important parts of his evidence." Your Committee have takee the pains to examine the records of 1831, in order to see if this grave charge, brought by Mr. Stayner against the Committee of that day be founded or not. The parts of his evidence which he states were suppressed, consist of a letter dated 18th March, 1831. The important information which it certain parts of the correspondence between that Contains consists in stating that "Newspaper Editors Officer and the Secretary of the Department in London, which has come under the observation of of postage," a fact which was already in the knowledge of every person in the community, and "that "there was a Deputy Post Master General in Ca"nada in 1775." This information is wrapt up in a
mass of unnecessary verbiage which, however "important" in the writer's estimation was properly of
no moment in that of the committee. The communication referred to will be found in the Appendix to
this Report marked ().

Your Committee would respectfully submit that public officers should be obliged, when performing their public duties, to abstain for the future, from remarks which cannot answer any good purpose, and which must at last be both ill-timed and ill-placed. The duty of the Deputy Post Master General here is merely to accommodate the public as far as his means permit, and to give all the information in his power when called so to do, and his time can always be better employed in the performance of the duties of his office than writing despatches reflecting on superior authority, or in endeavouring to protect himself and his department from that wholesome scrutiny which they stand so much in need of.

Your Committee would not have alluded to this matter were it not that they perceive in a letter from that officer to Mr. Freeling, dated 29th March, 1835, a latent desire to act by the House of Assembly of

Upper Canada in the same manner that he for two sessions acted towards Committees of your Honorable House. It is to be hoped, however, that firmness on the part of your Honourable House, and a determination on the part of His Majesty's Government to discountenance a repetition of such improper conduct in public offices, will put an end for ever to that concealment which has until now so constantly enveloped the affairs of the Post Office Department,

Much remains yet to be done in order to arrive at a proper opinion of the state of that department, and especially of its financial concerns.

This, however, must be the work of time, patience, and close investigation. Wherefore your Committee respectfully recommend to your Honorable House to continue, next session, the inquiry into the condition of the Post Office Department, with a view to the application of an efficient remedy to the defects in its organization and management.

All which is nevertheless humbly submitted.

(Signed)

E. B. O'CALLAGHAN.

Chairman.

8th March, 1836.

## FIRST REPORT

PROM THE

## SELECT COMMITTEE

TO WHICH WAS REFERRED THE

## PETITION OF WILLIAM L. MACKENZIE, ESQUIRE,

ACTING EXECUTOR TO THE ESTATE

OF THE
LATE ROBERT RANDAL, OF CHIPPAWA, IN THE COUNTY OF LINCOLN, ESQUIRES

OR'SO MUCH OF THE' BEST DESCRIPTION OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE SECOND OF THE S SAID PETITION AS RELATES TO THE NEPEAN AND CHAUDIERE, ESTATE COUNTY OF CARLETON.

## Rembers of Committee:

DAVID THORBURN, Esquire, Chairman.

Mr. MACMICKING, Mr. JAMES WILSON, and Mr. SMALL, Mr. GIBSON.

and the second of the second light were the first to be an ellipsed to

To the Honorable the House of Assembly, &c. &c.

The select Committee to which was referred the petition of W. L. Mackenzie. Esquire, acting Executor of the Estate of the late Robert Randal (in his life time of Chippawa, in the County of Lincoln, Esquire, have enquired into the matters referred to them, so far as concerns the Estate at the Napean and Chaudiere, and beg

leave to submit the following as a first Report:—
In the year-1809 Mr. Randal obtained a grant from the Crown of one thousand acres of land, and a deed for 950 acres in the county of Carleton, part of which included water privileges of extraordinary value. His Agents in obtaining this property were the late Honorable Mr. Justice Boulton, and his son Mr. H. J. Boulton, late Attorney General of this Province, who thus possessed the means of acquiring a knowledge of the worth of the grants,

The remarkable circumstances under which Mr. Randal's lands were sacrificed the unusual hardships of his case, and the renewed efforts he made to obtain justice, are well known to the Country them all them the best on to evil public services

In 1828 he applied by petition to the House of Assembly for such redress as it was in the power of the House to afford, and a special Committee was cappointed, consisting of the Honorable M. S. Bidwell now the Speaker of this House the Honorable

orable John Beverly Robinson, Chief Justice of Upper Canada, the Honorable John Rolph, B. C. Beardsley, Esquire, now of New Brunswick, and the late Capt. John Matthews.

An attested Copy of this Petition, with the interesting report of that Committee, and the evidence on which it was founded, are hereto annexed, also a Copy of the Bill which its Chairman reported, appointing a Court of Equitable Jurisdiction to do justice in the case, the Honorable Justice Willis to be the Judge. The House of Assembly passed the Bill but the Legislative Council, being opposed it is presumed to its principle, declined to amend it—they threw it out. Mr. Randal had previously applied to the Court of King's Bench, but from that institution he obtained no redress.

On the 14th of March 1829 the House of Assembly addressed His Majesty on the state of the administration of Justice. We quote two paragraphs:—

"By the Provincial Act erecting that Court (the King's Bench) it is wisely pro"vided "that a Chief Justice, together with two puisne Judges shall preside therein."
"No explanation can add to the clearness of that provision; so obviously conducive
"to the safety and liberty of the subject, and it has become our urgent duty, humbly
"to declare to Your Majesty, that our duty forbids us to yield to the attempts of the
"local administration to entail upon us the dangerous encroachments made in years
"of past misrule by establishing such a construction of that Law as would place the
"rights and liberties, the property and lives of the people of this Province, at the
"disposal of one while a liberal salary is provided for three Judges."

"In Michaelmas Term last, Mr. Justice Hagerman, alone constituted our Court of King's Bench, wherein he confirmed his own questioned Judgment, at the preceding Assizes, in a Trial in which Mr. Justice Sherwood was interested; the result of which trial involved a property of very great value, acquired through those extraordinary judicial proceedings in the case of Mr. Randal, whose injustice has long been unavailingly an object of Legislative relief and public sympathy. It is from such proceedings, such Courts, and such Judges, that the people desire to be "relieved."

In 1832 the House of Commons of the United Kingdom addressed His Majesty, requesting that a copy of the above mentioned address from Upper Canada might be laid before it. His Majesty sent it down, and the House ordered it to be printed and placed among its records but Mr. Randal obtained no relief.

In 1830 he again petitioned the House of Assembly for redress, and a bill was introduced, ordered to a third reading by a vote of 33 to 2, and passed by a vote of thirty one to two, appointing the Honorable Louis Joseph Papineau, Speaker of the House of Assembly of Lower Canada, a Judge in Equity, to try the case and do justice, but the Legislative Council, being as before it is presumed opposed to the principle of the Bill, it was found on an examination of their Journals, on the motion of Mr. Perry that they had ordered its further consideration to be deferred three months.

In 1830 Mr. Randal applied by Petition to His Excellency Sir John Colborne, stating his case and exhibiting the proceedings had by Mr. Boulton but his application was productive of no beneficial results, his petition and reply are hereto appended.

In 1823 he applied to the Governor in Chief on the subject, we annex hereto the correspondence.

In 1834, Mr. Randal died, having spent nearly seven years of his life in a Prison, and the last thirteen years of it in a series of vain and fruitless efforts to obtain in Upper Canada that tardy justice which the defective organization of our Judicial Institutions, the personally interested situation of some of our Judges, and the character and composition of the Legislative Council denied him, His Executors under the Will, the late Colonel Thomas Horner and the present Petitioner took it is presumed such steps as they believed to be the best, on behalf of his estate, when the cholera carried off the former, and nothing further was done in the matter of the Chaudiere property until last session, when Mr. Mackenzie applied for the interposition of the House, which appointed a Committee, and a bill was a third time reported in a third Parliament for the abjudication of the claim according to Equity. But as it had been omitted to give a notice in the Gazette in the matter which affected private rights, further proceedings were deferred till the present session.

After some difficulties as to the style and tenor of the notice, an advertisement was placed in the Upper Canada Gazette, and the matter is now brought for the fourth time before the Legislature by Petition.

The correspondence between the late Mr. Justice Boulton, Mr. H. J. Boulton and Mr. Randal, at the time the former acted as Agents in obtaining the property from the Crown, a letter to Lieutenant Governor Gore from Mr. McGillivray of the North West Company; and a letter from Captain Le Breton and others who wished to buy the Chaudiere property or parts of it, are reported herewith. Mr. Waters a Member of the House for the District of Ottawa was desired last summer to make enquiry as to the worth of the Chaudiere property and in whose possession it was; and your Committee have examined that gentleman who is of opinion that it is worth about £20,000, and will greatly increase in value.

In the concluding paragraph to the report of 1828 we find the following passage:—

"Your Committee have to remark that Mr. Boulton was conducting a cause for himself against his own client, and when they consider the nature of the debt, the great and multiplied irregularities by which the judgment and execution were obtained—the great value of the property sacrificed; and the expensive and fruitless endeavors of the Petitioner to obtain a reversal of the proceedings, they do not hesitate to recommend relief. Independent of the interest of one of the Judges, it appears that the Court of King's Bench, if they set the proceedings aside, could not afford adequate relief, and therefore your Committee have reported a bill enabling the Honorable Mr. Justice Willis to enquire into the matter alledged in the petition, and to do justice between all the persons interested."

Eight years have elapsed since the bill mentioned in the above extract was reported—the veto of another branch of the Legislature continued to withhold redress from the complainant until the grave closed on his importunities.

For the relief of his heirs this Committee do now report a similar bill to those passed in 1828 and 1830, and its Members unite in the expression of a wish that a Judicial enquiry will no longer be deferred, but that justice will be speedily done between all the persons concerned.

DAVID THORBURN, Chairman.

Committee Room, House of Assembly, 30th March, 1836.

THURSDAY, 31st March 1836.

The Committee met.

CHARLES WATERS, ESQUIRE. M. P., OTTAWA DISTRICT, called in and examined.

Question 1. What do you consider the fair value of the property in Nepean claimed by Mr. Randal's Heirs, and for which he has a Grant and Deed from the Crown dated in 1809?

Answer 1. The value of the property on the Ottawa River, embracing as it does, water privileges of the first magnitude, and an extensive quarry of the first rate stone for building, and lying in the immediate vicinity of Bytown and over which Bytown would shortly extend if Plots were exposed to sale, is immense at the present moment, and from the commanding position of Bytown the increase in the value of this property must be very rapid and very great; and which together with the valuable property at the confluence of the River Jacques with the River Rideau, embracing as it does a most valuable Mill scite and other important advantages. I should consider the whole, were I the owner, worth about £20,000.

Question 2. Have you personally inspected and examined this property?

Answer 2. I have.

Question 3. The statements by you and now shewn you [No. 4,] are they not the results of a personal enquiry by yourself on the property?

Answer 3. They are the results of personal enquiry made by myself on the property.

## APPEPDIX No. 1.

GOVERNMENT HOUSE, Toronto, 25th August, 1835.

SIR

I am directed by the Lieutenant Governor to transmit to you with reference to your application of the 19th inst. the accompanying copy of a statement from Mr. Stanton—and the form of notice which he has been authorized to adopt, in communicating your intention of petitioning the Legislature as an executor of the late Mr. Rundal.

I am Sir.

Your obedient Serv't.

W. ROWAN.

W. L. MACKENZIE, Esq. St. Catharines.

## APPENDIX No. 2.

Copy.

TORONTO, 25th August, 1826.

SIR

On the subject of the notice desired to be given by Mr. Mackenzie referred to in your letter of yesterday's date, I beg that His Excellency may be informed that in conversation with Mr. Mackenzie after my note No. 1, I did endeavor to point out to him as plainly as I could, what I thought would convey in ordinary and usual terms the information he was desirous of notifying to the public and which would have been much to the following purport:

To all whom it may concern:

Public notice is hereby given that application will be made to the Legislature at its next ensuing Session by Petition from the Executor to the estate of the late Robert Randal. Esq. for the enactment of a law establishing a special tribunal for the revision of certain proceedings in the Court of King's Bench by which Lots (enumerating the lands as described) granted by the Crown to the said late Robert Randal in 1809, were adjudged to be sold, or were sold by the sheriff and conveyed to others; and until the issue of such application shall be determined all persons are warned against purchasing or leasing any part of the said property.

If Mr. Mackenzie had felt at all disposed to meet such a suggestion, or had chosen to adopt any other form of words of his own, conveying in substance such a notification to the public, the insertion in the Gazette would not have been made matter of question.

If the notice, which is above suggested, should appear to be sufficient for the proposed object, and is approved of, His Excellency's desire for the insertion in the next Gazette shall not full to be duly attended to.

I have, &c. ROB'T. STANTON.

No. 3.

CASTLE OF St. Lewis, Quebec, 21st February, 1823.

Sir,

His Excellency, the Governor in Chief commands me to acquaint you, in answer to your Letter of 20th instant, that he has had under his most serious consideration your Memorial of last summer, setting forth various grievances and acts of injustice to you in your civil rights, on the part of different persons connected with the administration of the Law in the Upper Province, and His Excellency directs me to add that as he does not possess the authority either to investigate or redress your alleged grievances, he can only refer you to the Governor of that Province who will, no doubt, pay all proper attention to your representation.

I have the honor to be,

Sir,

Your most obedient Servant.

A. W. COCHRAN,

Secretary

R. RANDAL, Esq. York, Upper Canada.

No. 4. Chapais and Jan.

(Copy.) Described

Sir

I have the honor of transmitting to you for the information of His Excellency the Lieutenant Governor, a copy of the Report made by the House of Assembly upon my petition of grievous less of property from the undue administration of public justice.

That others may have suffered from the same cause I cannot doubt, but I humbly hope that the patient suffering of injustice by many will not be prejudicial to my seeking relief against the magnitude of my loss.

The enclosed report was the result of an investigation by a committee composed of the present Speaker of the House of Assembly, the present Chief Justice, Captain Matthews, Mr. John Rolph and Mr. Beardsley.

On the report of that Committee a bill was passed by the last Parliament to enable Mr. Justice Willis to try the case over again, and thus supply the want of a Court of Equitable Jurisdiction, a means of redress which exists in England in ordinary cases.

The bill was lost in the Legislative Council.

A bill for the same purpose passed the representative branch of the Legislature during its present session, to enable the Speaker of the House of Assembly of Lower Canada to try the cause. agreed to with only two opposing voices, and that too after the case had had the fullest consideration both in and out of Parliament. But the bill was lost in the Legislative Council and I am still without redress.

That it is His Excellency's anxious and earnest wish that speedy and impartial justice should be administered to all His Majesty's subjects, without distinction, I firmly believe. And whether the obstruction in my case arises out of the composition of the Legislative Council, or from any other cause to me unknown, I trust that His Excellency will exert his powerful influence to remove that bar, so that I may be enabled to have my case fairly tried and determined in a Court of Law.

> I have the honor to be With profound respect.

Your most ob't & humble serv't ROBERT RANDAL.

Z. Mudge, Esquire, Civil Secretary.

No. 5.

GOVERNMENT HOUSE, York, 25th March, 1830.

With reference to your statement transmitted to the Lieutenant Governor on the 4th of March with the copy of the report made by the committee of House of Assembly I am directed to acquaint you that these documents have been sent to Mr. Boulton for his observations, and reply ; but as it appears that before Mr. Boulton can be called on to enter fully into an investigation of any of the charges that you may now think proper to allege against him, and which it is understood you have on several oc-casions forward, His Excellency requests that you will transmit to me for his information a statement of your case as may exhibit distinctly whether the grounds of your complaint are against

Mr. Boulton as conductor of your suit, or against the judges for an illegal decision, or against the sheriff, or the purchaser of your property.

I have the honor to be,

Sir,

Your most obedient, Humble Servant.

Z. MUDGE.

ROBERT RANDAL, Esq. M. P. P.

To the Honorable the Commons House of Assembly of U. Canada, in Provincial Parliament Assembled.

The Petition of Robert Randal, of Stamford in the County of Lincoln, Esquire.

HUMBLY SHEWETH:

That in the Year of our Lord one thousand eight hundred and sixteen or thereahouts, your petitioner employed the present Mr. Justice Boulton, then Attorney General, as his legal adviser, in all his affairs relative to the disputed property between the petitioner and Messrs. Clark and Street. That Mr. Justice Boulton continued such his legal adviser and attorney until his elevation to the bench, when he handed over, the petitioner's business and papers to his son the present Solicitor General. That upon Mr. Justice Boulton's so giving up the business of the petitioner to Henry John Boulton Esquire, the latter required of the petitioner a collateral security for the sum of fifty pounds, then due to his father, for his professional services, as also for fifty pounds, which were to accrue to himself. That your petitioner accordingly on the seventeenth day of March in the year of Our Lord, one thousand eight hundred and seventeen, executed and delivered to the said Henry John Boulton, a mortgage on Lot No. eleven in the first concession on the Rideau, in the township of Nepean, in the district of Johnstown; containing two hundred acres, for one hundred pounds; paya-ble with interest on the first day of January, in the year of our Lord, one thousand eight hundred and nineteen, and on the seventh day of July, in the year of our Lord, one thousand eight hundred and eight-een, your petitioner executed and delivered to the said Henry John Boulton, a bond in a penalty of two hundred pounds, with a condition reciting the said mortgage, and to pay to the said Henry John Boulton the sum of one hundred pounds as, mentioned in the said mortgage. That the above described lot is a most valuable one, your petitioner having many years ago been offered two pounds an acre for it, and another lote in the said townships having been subsequently sold at Sheriff's sale; at Mr. Boulton's suit, for ready money, for four hundred and fifty pounds, or thereabouts, as your petitioner has been informed and believes.

That subsequently, and after the execution and delivery of the bond and mortgage, the said Henry John Boulton proceeded in the business of your petitioner, and obtained against one Elijah Phelps a verdict for a large sum—which having been set aside, and a new trial granted, the cause again came on for trial, at the Niagara Assizes, for the year one thousand eight, hundred and eighteen, where M. Justice Boulton presided, and where your petitioner

attended, with a great number of witnesses to go to That the said Henry John Boulton also attended as counsel for your petitioner, but who refused in the first instance going on with the trial, until the petitioner had given him his note for twenty-five pounds, payable on the first day of May A. D. 1819; but which note was not given without a strong remonstrance from your petitioner, as he considered he had already given him ample funds of security.-That after giving the said note, Henry John Boulton promised to go on with the cause immediately; when your petitioner went in search of his witnesses; but on his return was not a little astonished to find, that the cause had been ordered to lie over to the next assizes, in consequence of the judge declining from motives of delicacy to try it. That your petitioner strongly remonstrated against such a decision, both with his counsel and his father the judge, who admitted to the petitioner that before he excepted the circuit in which Niagara is, he knew this trial would come on, and had determined not to try it, as he had formerly been concerned in it. That the said Henry John Boulton must have been aware that this cause would not be tried; but had allowed your petitioner to go to a considerable expense in gathering his witnesses; had obtained his note for twenty-five pounds, and then abandoned him, and has never since done any business for him.

That afterwards and immediately after the said note became due, your petitioner was sued thereon, and upon the aforesaid bond by the said Henry John Boulton-he having got out his writ directed to the sheriff of Niagara, on the twenty-first day of May, A. D. 1819-and the note being only due on the first day of that month. That on the twenty-fourth day of June 1819, your petitioner was served at his residence at Stamford in the Niagara District, with the declaration and summons, at the suit of the said Henry John Baulton, returnable on the first of Trin ity Term then next, and from that day, until about eighteen months afterwards, and never until he was accidentally, informed whilst attending his duty in Parliament in the winter of 1821, of the sale of his lands at the suit of Henry John Boulton, did he hear verbally or by letter of its progress. That immediately after he was so served with the declaration and summons, your petitioner wrote to the said Henry John Boulton upon the subject, requesting to be informed of the progress of the said suit, but receiving no answer, he imagined the same was dropped.

That on looking into the proceedings in the said suit, he finds the following to be the statement.

The summons issued the thirty first day of May, and was returnable on the first day of Trinity Term 1819. That on the thirteenth day of July following on the affidavit of service of the same, on this deponent, the declaration and summons were filed in the Crown Office, and on the same day an appearance entered in the same office by the said Henry John Boulton for your petitioner. That on the same day an affidavit was filed in the said office made by a clerk of the said Henry John Boulton, that the place of residence of your petitioner "in the Home Disret" was unknown to the person who made the affidavit. That on the same day a demand of plea was put up or filed in the said office, and accompanied the said affidavit. That on the nineteenth day of June, four days afterwards interlocatory and head.

judgment was signed against your petitioner, and execution issued against the personal effects of your petitioner to the sheriff of the Home District for the amount of the Bond, Notes and Costs. That is his declaration against your petitioner, the said Henry John Boulton declared in debt on the Bond and Note together, signed judgment on the same together, and issued execution against your petitioner for the same.

That the execution against your petitioner's chattels (directed to the sheriff of a district in which it was notorious to the plaintiff, as well as to every other person who knew him, that he did not reside,) was returnable on the first of Michaelmas Term in the same year, and was filed on the return day with the sheriffs return of "no goods" and on the same day, execution was issued against the lands of your petitioner, directed to the sheriff of the Johnstown District and returnable last of Michaelmas Term A. D. 1820, upon which your petitioner is informed a most valuable lot situated in the Township of Nepean, in the District of Bathurst, on the River Cttawa, and enjoying most important water privileges, and not the one mortgaged, has been sold to satisfy the said execution.

That by the tenth section of the Act of the 34th of George the Third, regulating the practice of the Court of King's Bench, and under which Act the process in the said cause, was issued, it is expressly enacted "That in all actions or suits where the de-"fendant or defendants reside without the limits of "the Home District, or District where the Court "shall be holden, eight days shall be allowed after "such demand of plea, as the ordinary time within which they shall be required to file their plea, &c." But that notwithstanding the said Act, the said Henry John Boulton, who perfectly knew the residence of your petitioner to be within the District of Niagara and not in the Home District, not only from having served him with the writ there, but also, from the letter which your petitioner wrote to him after the action was commenced, proceeded to sign not only interlocutory but final judgment within four days after demand of plea and that put up, or filed in a district where he well knew your pentioner did not reside.

That your petitioner is informed by professional gentlemen, that in no instance upon judgment by default, on a promissory note, can execution be issued, until the note has either been to a jury to assess the damages, or been sent by a rule of Court to the proper officer, to compute the principal and interest; but that notwithstanding this rule of law, execution after judgment by default was at once issued on effer judgment by default was at once issued on effer promissory, note so, given by your petitioner to the said, Henry, John, Boulton.

That by a general rule of the Court of King's Bench in the 40th year of the late King, it is expressly ordered; that in future, the note or hond is to be produced for the inspection of the judges; "when a motion is made to refer them to the master?" but that the said Henry John Boulton, not only did not produce either the note or bond to the judges; but did not even move the Court to have them referred to the master.

That by another general rule of the said Court, made in the came year, it is expressly, ordered that

from & after the end of this (Michaelmas) Term, the clerk give no writ of execution on default, without an order of the Court in term time, or fiat of a judge in vacation." I nat notwithstanding this rule, then in full force, the said Henry John Boulton proceeded to sue out execution against your petitioner on a judgment by default without either an order from the Court or fiat from the Judge.

That by another Rule of the said Court made in Hilary term in the 47th year of the same King it is also expressly "ordered, that in all cases of Judg-"ment by default, on Bonds conditioned for the "payment of money, a rule Nisi," to refer the Bond "to the master for Taxation, shall not be necessary, but a notice of motion for the peremptory rule "shall be given in writing to the defendant," or his "Attorney, at least thirty days before Hilary and "Easter terms, and twenty one days before 'rinity "and Michaelmas terms respectively," which rule shall accordingly be made absolute in the first instance on affidavit of such notice. That notwithstanding this rule was in full force at the time of signing the judgment against the Petitioner, he never received, nor did the said Henry John Boulton ever give the above required notice to your Petitioner, or to any Attorney for him.

Your petitioner further represents, that as the said condition of the said Bond recited the said Mortgage and professing therefore to be only collateral security, your petitioner was entitled to the benefit of an Act of the Legislature of the mother country and in force in this Province, requiring in behalf of such defendants, that the plaintiff shall set forther record, the condition of such Bond, assign breaches thereof, and assess damages before a jury, and your petitioner is informed that according to law no execution can in such case issue till such assessment has taken place. But in the suit against your petitioner, the condition of the Bond is wholly suppressed and does not appear on the record.

Your petitioner found in the course of the applications made by him to the Court of King's Bench for relief, that the following rule was insisted upon as a vindication of the judgment secretly obtained as aforesaid.

Michaelmas Term, Scott, C. J. ) Those, J.

It is ordered, that from and after the first day of Hilary Term next, in all cases where the defendant has not appeared either in person or by his Attorney, judgment for default shall not be signed, without an affidavit first made and filed of a demand of the baving been served upon the defen ant personally or by being left at his usual place of abode, if the same be in the district where the action is brought, and if the defendant's place of abode be not in such district, that then the demand of Ples shall be entered in the office, accompanied by an affidavit stating that the defendant's place of abode within such district is not known to the Deponent, and that Judgment by default in such case shall not be signed till 4 days after such service or entry respectively.—By the Court

(Signed):

JOHN SMALL,

the light been white the rest of the Order

Under this rule, persons are required to take an oath that must do violence to the conscience of the deponent, inasmuch as it implies a belief that the defendant's place of residence is in such District, but not known to the deponent.

Your Petitioner also felt deeply aggrieved at the operation of the said Rule, not only because it arbitrarily deprived your petitioner of a service of the notice at his place of abode, and warranted a judgment in 4 instead of 8 days, in defiance of the laws of this province, but also because it violated the common principles of justice, by requiring notice to be served upon the residents of the Home District, while it favored the Attornies of this Town, by exempting them from the trouble of giving such notices to those defendants, who from their remoter residence from the Crown Office in the outer districts, particularly needed a rule of the said Court to enforce, rather than to supersede, the just enactment of the Provincial Legislature, for beir protection.

That on being informed as before mentioned, of the sale of your petitioner's lands, at the suit of the said Henry John Boulton, and which was the first intimation he ever had of the progress of the said suit), your petitioner immediately caused the proceedings to be looked into, and finding the above gross irregularties in the proceedings, he caused an application as soon as Counsel could be heard, to be made to the Court of King's Bench for relief, in setting aside the judgment and execution which had been so manifestly obtained against every rule and order of the said Court; but after argument, the Court decided it came too late.

That your petitioner subsequently caused another application to be made on the same and other grounds to set aside this judgment, conceiving that it had not been fully argued, but it was again decided against him, on the grounds of the former division, although the Court expressed a strong wish to interfere, if it could consistently with its rules.

Your petitioner also humbly states that on the second application made for relief against this judgment, the Judges of the said. Court upheld the same on the ground that the matter had been before heard and determined by them, and that according to an sucient rule of Court in the reign, as your petitioner believes, of one of the James's, no matter heard by Counsel on both sides and on which the opinion of the Court had I em given could be re-opened, and that the Counsel attempting it was liable to be slea-ced for one year, and should the Court be again troubled a second time in like manger, they would desire to see the penalty inflicted; and your petitioner cannot but feel, and express the oppression which he suffers from the unjust adherence to one rule of court for the purpose of upholding against your petitioners judgment which had been obtained by the violation of three other rules of court equally solution and binding, and even in violation of several legislative enactments in this Province and in England, the due and honorable observance of which by the said Henry John Boulton would have been an ample protection for your petitioner against the ruin and injustice brought upon him.

That in the year 1824, immediately after the last decision, as a last resort to get rid of this extraordinary judgment, your petitioner was advised to bring

a writ of error corum nobis to reverse this said judgment, that being, in the opinion of his counsel, his only chance; but the difficulty lay in procuring the writ, as it is an original one which issues out of Chancery, and there being no court of that description in this Province. This difficulty was however at last surmounted, the writ obtained under the great scal of the Province, error assigned and pleaded to, and the matters argued in the vacation of Trinity term, A. D. 1825, before two of the Judges, Mr. Justice Boulton being absent in England, and judgment was to be given in the following Term.

That on applying for judgment, so far as your petitioner could judge, the Judges seemed divided in their opinions, and that therefore your petitioner would have received nothing by a division of opinion—but without giving judgment, the decision was, that the matter must stand over till the Bench was full.

That this was to your petitioner tantamount to a decision against him, insamuch as Mr. Justice Boutton had on a former occasion, as before stated, refused to try a cause in which he had been interested for your petitioner, and could not now of course be expected to give an opinion either way, as the greater part of the money recovered by this very judgment had been received by him.

That strange as it may seem, the Sheriff of the Johnstown District instead of selling the Lot, so mortgaged by your petitioner to the said Henry John Boulton, and thus as it were foreclosing the same, sold another and still more valuable lot belonging to your petitioner, and the same was purchased, as your petitioner has been informed, by Levius P. Sherwood, Esquire, who has since been elevated to the Bench.

That your petitioner under these circumstances, would not feel it proper, and has been advised not to apply to the Court for their judgment, which your petitioner thinks under the very peculiar circumstances of the case could not be had, for the same reason that the Honorable Mr. Justice Boulton once refused to try a case for him.

Your petitioner humbly represents, that after submitting to many losses and afflictions which would break the heart of almost any man, he found that the most valuable remnant of his property had been most cruelly sacrificed, under this irregular and nefarious judgment, and unless relieved by the interposition of your Honourable House, he shall have to number himself among those who have fallen victims to injustice and oppression in this Province.

That there being no higher court in this Province, to which your petitioner can now resort, he has thus petitioned your Honorable House to interfere and grant him such relief as to your honorable body may appear just.

And as in duty bound will ever pray.

ROBERT RANDAL.

York, January 19th, 1828.

Certified to be a true copy,

JAMES FITZGIBBON, Clerk of Assembly. No. 7. REPORT

## PETITION OF ROBERT RANDAL, Esq.

The Committee to whom was referred the petition of Robert Randal, Esquire, with power to send for persons and papers and report thereon, have enquired into the same, and respectfully submit the following report:—

It is admitted that the demand of Mr. Boulton against Mr. Randal was for professional services rendered by himself and the Honorable D'Arcy Boulton, late a Judge of the King's Bench. The principal charges are £50 for business alleged to have been done by the Honorable D'Arcy Boulton before his elevation to the Bench—and £50 to Henry J. Boulton, being principally a charge of 5 guineas a day for eight days in attending an arbitration at Niagara, in the Niagara District, for the petitioner in a suit Robert Randal vs. Elijah Phelps, in the Court of King's Bench, in which 5 guiness had been previously paid as a retaining fee, and not included in the account for which the bond was given.—In security for the payment of the said sum of one hundred pounds, the petitioner gave a mortgage to Mr. Boulton of Lot No. 11, in the first concession on the Rideau, in the township of Nepean, and which mortgage is recited in the condition of the bond upon which the action was brought. The cause of R. Randal vs. Elijah Phelps, came on for trial at the Niagara Assizes in the year 1818, where Mr. Justice Boulton presided, and Mr. Henry J. Boulton attended as Counsel for the petitioner, the plaintiff, in the cause.—On the day upon which the trial was to take place, and a short time before it was called on; the etititioner at the request of Mr. Boulton gave him his note for twenty-five pounds, payable the first of May following, as a counsel fee for the expected trial: The petitioner proceeded to collect his witnesses, and Mr. Boulton called on the cause-when the Judge refused to try it, on the ground of his having formerly acted as attorney in it for the plaintiff.—
The cause was therefore not tried.—Upon this note
as well as upon the bond, Mr. Boulton recovered the judgment, against which the petitioner complains.

At the subsequent trial, Mr. Boulton did not attend; and it appears that taking offence at the want of confidence which he inferred from a letter written by the petitioner, he did not feel himself bound, without a further request and a further fee, to continue his professional aid in the suit. This will be seen for the copies of Mr. Boulton's letters armexed-to sated 24th May, 1819, and the other 8th July, 1819. The petitioner complains in the first place, that Mr. Boulton, at the time he took the note for twenty-five pounds, knew the cause would not be tried.—This is denied before your committee by Mr. Boulton. The Attorney General states in his evidence, that he expected the refusal of the Judge to try the cause though unapprised of it.—He also states that he has an indistinct, recollection that the Judge, about the time of arranging the circuits, expressed his reluctance to try the cause. The House can judge how far it would have been judicially correct for Mr. Justice Boulton to try the cause in which he had been attorney and counsel—and therefore how far there was a reasonable presumption for Mr. Boulton that the cause would not be tried, under such circumstances; and how far the nate for twenty-five pounds should have been retained after the immediate failure of the consideration for which it was given.

Mr. Boulton prosecuted Mr. Randal for the recovery of the one hundred and twenty-five pounds upon the bond and note, and the following is an abstract

of the proceedings in the suit:

IN THE KING'S BENCH.

Henry J. Boulton, Plaintiff This action was commenced by a writ of Robert Randal, Defendant. ) summons in a plea of debt, issued from the Crown Office at York in the Home District, on the 31st day of May, 1819, returnable the 1st day of Trinity Term 1819, being the fifth day of July of that year. This summons, with the declaration annexed, was filed in the said Crown Office on the 13th July, 1819, with an affidavit made by Samuel P. Jarvis before Thomas Dickson on the 24th day of June, 1819, stating that the same was served on the defendant by the ponent on the 22nd day of June of the same year. On the said 13th day of July 1819, an appearance for said defendant in said cause was entered in the said office by said plaintiff, and on the same day an affidavit made on the 13th day of July, 1819, before John Smull, Clerk of the Crown, by the present Hon. James B. Macaulay, then a student at law with the said Henry John Boulton, stating that the place of residence of the defendant in the Home District was unknown to the deponent, and also a demand of plea were filed in the Crown Office. On the 13th day of July 1819 interlocutory judgment was signed, and final judgment entered, for £225 debt, and £5 3 8 damages and costs, amounting altogether to the sum of two hundred and thirty pounds. On the 5th of October, 1819, a writ of fieri facias against the goods and chattels of the defendant was issued upon a precipe filed by the plaintiff, directed to the stariff of the Home District, returnable on the 1st day of Michaelmas term following, being the 1st day of November, 1819.

This execution with a return of nulla bona by the Sheriff of the Home District, was filed in the said Crown Office on the return day, and on the same day a writ of fieri facias against the defendant's lands and tenements was issued (upon a proceipe filed by the plaintiff) directed to the sheriff of the Johnstown District, and returnable the last day of Michaelmas Term 1820, which writ was filed in the said office on the seventeenth day of March, 1825, with the following return by the sheriff of the Johnstown District.

By virtue of this writ to me directed, I have caused to be made by the public sale of the lands and tenements of the within named Robert Randal, (that is to say), Lot No. 40, in the first concession of Nepean, in the Johnstown District, together with its broken front in front thereof on the Ottawa or Grand River, the debt and damages within mentioned, which I have ready before our Lord the King, to be rendered to the said Henry John Boulton for his debt and damages aforesaid, as within I am commanded. (Signed) JOHN-STEWART.

Sheriff of District of Johnstown.

That on the 7th day of November; 1821, a motion was made to the Court to set aside the judgment and execution upon an affidavit of the defendant, upon which a rule was granted to shew cause; and upon use shewn, the rule was discharged by the Court.

And that on the 23rd cay of January, 1824, a similar application was made to the Court upon an affidavit of the defendant; and upon cause shewn, and air affidavit filed by the Plaintiff on the 30th April, 1824, the rule was discharged.

On the twenty fourth day of June 1824, a writ of error, coram nobis, under the great seal of the Province was granted, error was assigned by the defendant in this case on the 13th day of December 1824, and the plaintiff in this case pleaded thereto

on the 25th day of January 1825.

The foregoing is a correct schedule of the proceedings in this cause; no other proceedings in the case have been filed or entered in the Crown Office. There does not appear to have been any assessment of damages by the Court or a Jury or any order of the Court of flat of a Judge thereof for judgment or for any execution.-In obtaining this judgment, your Committee notice the following violations of the then existing law.—By the 10th Section of the Act 34, Geo. 111, regulating the practice of the Court of King's Bench, and under which act the process in the said cause was issued, it is expressly enacted, "that in all actions or suits where the defendant or defendants reside without the limits of the Home District, or District where the Court shall be holden, eight days shall be allowed after such demand of plea, as the ordinary time within which they shall be required to file their plea, &c."—But notwith-standing the said act, the said Henry John Boulton who perfectly knew the residence of the petitioner to be within the District of Niagara, and not in the Home District, proceeded to sign not only interlocutory but final judgment, within four days after demand of plea, and that put up or filed in a district where he well knew the petitioner did not reside.

This prejudicial violation of the rules prescribed by the Statutes of the Province, made for the protection of defendants, is attempted to be justified by a prevailing practice under the following rule of

Court.

Scott, C. J. ) It is ordered that from and after the first day of Hilary term next, in all Powell, J. Campbell, J. ) cases where the defendant has not Mi-haelmas appeared either in person or by his 54th Geo. 3d. attorney, judgment by default shall not be signed, without an affidavit being first made and filed of a demand of ples having been served upon the defendant or by being left at his usual place of abode, if the same he in the District where the action is brought, and if the defendant's place of abode he not in such District, that then the demand of plea shall be entered in the office, accompanied with an affidavit stating that the defendant's place of abode within such District is not known to the deponent and that judgment by default in such cases shall not be signed till four days after such service or entry

respectively.

This rule, if so construed as to warrant the practice contended for, carries injustice on the face of it. If a defendant lives in the town of York, or within the precincts of the Home District, the demand of plea must be served upon him or left at his usual place of abode; but if he lives in remoter settlements in the very Eastern and Western extremities of the Province, the eight days given by the Statute are arbitrarily reduced to four, and the notice instead of being left at his abode, is filed in an office, to which from his remoteness he cannot have access, and of the proceedings in which from the inevitable diffi-

C

culties of communication, he cannot be reasonably

apprised.

The affidavit required by this rule of court, to consummate its object, is also of a most extraordinary nature. "If the defendant's place of abode be not in such District, then the demand of plea shall be entered in the office, accompanied with an affidavit stating that the defendant's place of abode within such District is not known to the deponent."

In the cause now the subject of complaint, the summons was served upon the petitioner in the Niagura District, where he had resided for a number of years, and Mr. Boulton admits that the place of abode was known to him and to the Clerk, under whose oath he was enabled to sign his judgment. It is implied, that the deponent believes the place of abode to be in the Home District; but not known to him.

It would require strong language to give a suitable reprobation of a rule of court which is equally subversive of the rules of good conscience and statutary law.

The committee desire to remark, that from the evidence it appears that Mr. Boulton acted upon this rule in many other cases in which he had no personal interest, and the profession generally did the same.

The judgment appears to have been in several other respects obtained contrary to the practice followed by the Court, which practice, had it been followed or enforced, would have afforded some protection against undue advantages and surprise.—The following rule was not observed:—

Elmsley, C. J. Rule 8—"It is ordered that in fu-Powel, J. ture the note or bond is to be produced for the inspection of the Michaelmas, Judges, when a motion is made to 48th Geo. 3rd. refer them to the master."

The Court require the note and hond to be produced for the inspection of the Judges; a rule which it is presumed, was intended to prevent fraud and maintain unsullied the character of public justice; and when your committee consider the irregularities disclosed in these proceedings, and an attempt to justify them by their frequency, they cannot but feel that the rule was as necessary as it was well intended.

The following rule of Court was also obviously intended to prevent undue advantages and surprise, by the violation of which rule Mr. Boulton had an execution against the petitioner's lands and tenements, before he could by a legal and regular course have obtained a rule absolute to sanction his proceed-

Hilary Scott, C. J. Rule 21st—"It is or47 Geo. 3d. 1 Thorp, J. | dered that in future, in all cases by judgment by default on bonds conditioned for the payment of money, a rule nisi to refer the bond to the master for taxation, shall not be necessary—but in lieu thereof a notice of motion for the peremptory rule shall be given in writing to the defendant or his attorney at least thirty-one days hefore Hilary and Easter terms, and twenty-one days before Trinity and Michaelmas terms, respectively; which rule shall accordingly be made absolute in the first instance, on an affidavit having been made of the service of such notice."

The execution was also obtained with the same irregularity and in defiance of the known rules of court, as appears from the following rule:

Elmsley, C. J. Rule 10.—"It is ordered that from Powell, J. and after the end of this term, the Alcock, J. Clerk give no writ of execution on a Judgment by default, on any bond, without an order of Court in term time, on the fiat of a Judge in vacation."

Mr. Boulton, however, dispensed with any order of court in term time, or flat of Judge in vacation.

The bond upon which the action was in part founded, was a mortgage bond, a copy of which is annexed.—It appears on the face to be collateral security; and how far therefore Mr. Boulton was bound to suggest breaches according to the statute, your committee have not inquired.

It appears that several applications have been made to the Court of King's Bench for relief without avail.—The refusal of the court to interfere, was not on the ground that the application had no merits, but on the principle that the objection came too late. Your Committee, however, think it right to observe, that from the course pursued by Mr. Boulton, the petitioner was deprived of those notices to which he was entitled by the written law of the land and the rules of the court.

Irrogularities may be waived after notice of them by delay, or by taking a step in the defence; but it would be productive of incalculable injustice if all notices could be suppressed and a suit been clandestinely carried through all its stages, at the sacrifice of all law, and the ruined defendant should be precluded from relief, while the plaintiff sheltered himself under his own wrong.—If this can be law your committee would recommend a legislative provision against it—for no defendant should be deemed guilty of irromedial neglect, when the plaintiff keeps him in the dark by his own wrong.

Mr. Boulton has received his principal and interest upon the bond and note. The fee of the land mortguged is also in him, and there is no Court of Chancery to interfere. The land sold at Sheriff's sale under this judgment is undoubtedly most valuable, and it appears to have been sold before the petitioner knew there was a judgment against him. Part of the land sold under the judgment is owned by the present Honorable Mr. Justice Sherwood, brother-inlaw to Mr. Boulton. There is however no evidence to shew that Mr. Boulton was concerned in the sale or the purchases.

Your Committee have to remark that Mr. Boulton was conducting a cause for himself against his own client; and when they consider the nature of the debt, the great and multiplied irregularities by which the independent and execution were obtained—the great value of the property sacrificed—and the expensive and fruitless endeavors of the petitioner to obtain a reversal of the proceedings, they do not heatate to recommend relief. Independent of the interest of one of the Judges is appears that the Court of King's Bench if they set the proceedings aside, could not afford adequate relief—and therefore your committee have reported a bill enabling the Honorable Mr. Justice Willist to enquire into the matters alleged in the petition and to do justice be-

tween all the persons interested. The Chief Justice is not included in the Bill as it is publicly reported that he is about to visit England; and under such circumstances the object of the measure might be defeated and the ends of public justice not be auswered, if he were included. Mr. Boulton complains of Mr. Randal, for having misrepresented the value and quantity of the land mortgaged to him, and the Committee have annexed the evidence and documents adduced in support of the charge.

All of which is respectfully submitted,

B. C. BEARDSLEY,

Chairman.

## APPENDIX TO REPORT.

The Committee on the petition of ROBERT RAN-DAL, Esq., met in the Joint Committee Room, February 13th, 1828.

PRESENT:

Messrs Aftorney General, MATTHEWS, Rough, and BIDWELL.

Dr. LEFFERTY, attended and was examined.

He states that he was present at the Assizes for Niagara in 1818, where a cause of Randal vs. Phelps was stated to have been entered for trial-Mr. Jusrice Boulton presided-saw Mr. Randal there-does notknow on what day of the sitting of the Court it was. He was going from the Court House to town for his witnesses, understanding that Mr. Boulton (the Solicitor, General,) was going to call the cause on. While he was absent Mr. Boulton did scall the cause on and the Judge declined trying it. on the ground that he had been Attorney, for the plaintiff, and had instituted the sction .- Dr. Lefferty then left the Court-house and went to town, and meeting Mr. Randal on the way, told him that his cause would, not, be tried; at which he appeared, much diseatisfied, and said ho had that morning given Mr. Boutton his note for 100 dollars for coming over to . conduct his trial-Mr. Randal went into Court, and in his presence urged the trial of the cause, but, the Judge positively declined. The Judge being pressed by Mr. Randal said he had objected to taking that circuit, because he was unwilling to try that causeknows that Mr. Randal paid something more than 40 dollars to an Innkeeper at Niagara for the expenses of some of his witnesses.

Mr. Randal produces a letter from Mr. Boulton, said to have been received 1st May, 1819, (marked F.)—also a letter from Mr. Boulton, dated May, 1819, (marked G.)—also a letter from Mr. Boulton of 8th July, (marked H.)—also a copy, of a letter from himself to Mr. Boulton, dated June 29th, 1819, (marked I.)—this letter he states he sent by one Jacob Dawn, to York; also a paper marked K, certified by the deputy clerk, of the Crown, as being a correct schedule of the original papers in the cause of Mr. Boulton vs. Randal—was served with process on 22nd June, 1819,—and on the 29th June, wrote that letter marked L—He saw Mr. Randal at ally was.

the Assizes, in August, 1819, but did not speak to him respecting the suit.

February 21st.

The COMMITTEE met again.

The Petitioner attended.

Dr. LEFFERTY again called in and examined.

Says he remembers in 1816, Mr. Justice Boulton, then Attorney General, conducted the trial of the same cause of Rundul rs. Phelps.—A nominal verdict was given and the cause was referred to arbitrationno award was made and it was tried at the next Assizes for Ningura.

Mr. Randal states to the Committee that a different lot from that mortgaged to Mr. Boulton was sold in execution to satisfy his debt, which Mr. Boulton says he has no doubt might have been, for he gave no particular directions to the Sheriff or Le subject.

WILLIAM MORRIS, Esq., called in and examined by Mr. Randal.

Says-he has no acquaintance with Mr. Le Breton —knows lot No. 40 in Nepean—called Point Nepean—heard it was sold either to Capt. Le Breton, or Mr. Sherwood now Judge Sherwood—Mr. Morris's brother attended the sale—it took place at the Court House in Brockville, Nepean being then part of the District of Johnstown—does not remember how long he had heard of the sale before it took

He authorised his brother, being at Brockville, (Alexander Morris) to bid as much as £300 for it; he afterwards found that his brother had gone as far as £449 for it, but not liking to go further, it was bid off to Capt. Le Breton or Mr. Sherwood for

Being asked by W. Randal whether he did not tell him Mr., Randal during the last Parliament, that he had only heard of the sale the night before it took place, answers that it was impossible, as he had hinself walked to Point Nepean (50 miles) to see the lot before the sale, and had in consequence, sent the directions to his brother. A Sheriff's notice of the sale was put at his Mr. Morris shop door in Perth which is as public a place as any Merchant's shop in Perth; it was put up as notices always are on the inside of the door; know nothing of the intended sale till he saw that notice—he went down, in consequence of a conversation with Dr. Thom, who had received in formation from some person on the Ottawa that Point Nopean was a valuable situation, and they consequently both went on foot to see it; after his return he wrote to his brother, by post, the instructions spoken of, and he thinks that the sale took place a few days after, but he does not distinctly recollect the time.

Had he been present at the sale he thinks he would have given as high as 7 or 800 pounds for it. If the property had been his, he thinks he would have been rejuctant to have taken £2000, for it.

Captain Le Breton, was at the sale; and his impression has always been that Mr. Sherwood either participated in the purchase or assisted Capt. Le Breton in making it; but he knows not how, the fact reThe Sheriff was John Stuart Esq., who is still Sheriff of the District of Johnstown; he is brother in law to Mr. Sherwood, and to the Solicitor General.

Thinks Mr. Sherwood knew nothing of the value of the Lot until he was applied to by Capt. Le Breton to join or assist him in the purchase.

Neither saw nor heard of any other notice of the sale, in Perth or the neighborhood or in the neighbourhood of the lot—has never conversed with any of the Messrs. Wrights of Hull, about the Lot—thinks they had no knowledge of the intended sale—found at Morris's run, about 5 miles from the Point, that they were ignorant of it. The notice of the sale was not likely to have attracted the attention of people in general, as the country was then so little known.

He considered the place of great value from its situation with respect to navigation and water privileges, but not from any idea or knowledge he had of any great expenditure being likely to be made there by the government, further than building a store or two for the reception of emigrants.

He meant, if he had bought it, to have given two or three acres to the Government for such a purpose. Thinks the lot not worth so much now as it was then, from an establishment which has been made on a neighboring lot by the Government since; which has occurred, it is understood, from the refusal of Capt. Le Breton to part, on reasonable terms, with the lot or a part of it for the purposes of the Government.

The Committee met again on Friday, February 22nd.

WILLIAM MORRIS, called again and examined.

Asked, for what sum he would have taken for allowing any person to select an acre from the lot at Nepean Point; had it been his?—says he would not have taken less than £500, and perhaps not that sum—because the best mill seat would probably be selected; there are several mill seats on the lot.

Seven years ago, a village was laid out upon the lot in question, by the present proprietors—does not know what number of houses are built there, but thinks not more than three or four.

The ATTORNEY GENERAL was retained in 1817 to defend Elijah Phelps against Robert Randal, in which a verdict had been rendered in favor of Randal at the preceding assizes for £10,000—that verdict was set aside and a new trial granted in October, 1818. He was present as Counsel for defendant at Niagara—he rode part of the way with Mr. Justice Boulton on his way to the Assizes—it was in October, 1818—cannot say where he stayed at Niagara.

He knew no more than any stranger in court that the Judge intended not to try the cause mentioned above—that he went as Counsel prepared for the defence when the Judge refused to try it. The Solicitor General seemed annoved at it and so expressed himself to him (the Attorney General) and thought it an unnecessary scruple on the part of the Judge, that he had been the Plaintiff's Attorney in the suit: but the Attorney General thought other-

wise and expected such refusal though as unapprised of it as any stranger. In the course of conversation the Judge might have expressed his reluctance to try the cause; and he has an indistinct recollection of its being the case about the time of arranging the circuits; but he had no reason to think the Judge had positively made up his mind when he left York.

The Solicitor General said that Randal had come with the intention to nave it tried—that he had himself come with that expectation, and only for that cause, and that it would be a vexation to Randal.

He was never retained by Mr. Boulton as his counsel upon any of the applications made by Mr. Randal to set aside the proceedings in Boulton vs. Randal. That either on the application of Mr. Stuart or Mr. Rolph, or both, he did at the request of the Solicitor General, the grounds of objection which he stated to be against the motion, and perhaps engaged in answering the rule sixi. That the Solicitor General applied to the Attorney General to oppose the writ of error, and he would have done so had he been present; he suggested to the Solicitor General not to object to the legality of the writ in error; but to allow the irregularities to come into discussion in that shape beforethe court, if the court did not themselves object to it.

To this the Solicitor General assented.

But as the Attorney General then went to England, is not acquainted with the further progress of the matter.

The cause of Randal vs. Phelps was tried at Niagara in 1819, before Powell C. J. and a special jury. Randal in person pleaded his own cause, and not by the Solicitor General, who was not present. He heard Randal in pleading his own cause, say that he was abandoned by his counsel the Solicitor General, and has no doubt Mr. Randal appealed to the indulgence of the Court upon matters of law, under the circumstances in which he was placed.—The cause was called on at the request of Mr. Ranhimself; that he thinks it likely the judge told him, Randal, that every legal advantage should be afforded him. The cause went of upon no legal objection; but it went to the Jury on the evidence; the Chief Justice charging strongly in favor of the defendant.

SATURDAY, 23rd.

The Committee met.

Mr. RANDAL attended.

Mr. Morris again examined-

There were but four or five inhabitants in the Township of Nepean at the time of the sale, and these he thinks were what are called squatters. The river Goodwood empties into the Rideau ten or twelve miles from the mouth of the Talter; thinks there was not an inhabitant on the river Goodwood time or ten years ago.—Had he never seen any particular lot on the Rideau below the river Good wood, which might have been advertised for sale, he would not have given much for it—it is good land however, and thinks it would now be valuable. At the time

spoken of, in 1819, thinks land so situated would have been worth about seven and six pence per acre, tho' now it is worth five or six dollers—would not have thought eighty acres in that situation a good security for £100; there is no mill seat on the Rideau; on the place spoken of, it is dead water.

Mr. Boulton attended and produced to the committee a mortgage from Mr. Randal to him dated March 17, 1817, which is the same referred to in the bond on which judgment was entered. The mortgage is upon lot No. 11 in the first concession of Nepean on the Rideau for £100; to be paid 1st January, 1818. The lot is said in the mortgage to contain 200 acres. Mr. Boulton produced a certificate from the Surveyor General, that the lot thus mortgaged contains only 78 acres; and that the patent to Mr. Randal described lots Nos. 10 and 11 in the 1st concession as containing together only 100 acres and Mr. Boulton calls the attention of the committee to the circumstance that in the mortgage, lot No. 11 only was stated to contain 200 acres.

Mr. Boulton also produces an affidavit of Mr. Randal, sworn the 6th July 1824, for the purpose of his qualification to be returned as a member, in which he describes the lot in question, No. 11, as a broken lot whereas in his petition to the house, he states that he gave Mr. Boulton a mortgage on 200 acres of land. He also produces a certificate given by the deputy clerk of the Crown setting forth various causes conducted to judgment by other attornies, viz: Fothergill vs. Brice; Somers vs. Petit; Heron vs. Dewitt; McNider & Forsyth vs. Clarke; in which the proceedings were precisely such against the defendants residing out of the Home district as in the case against Mr. Randal.

And he remarks that in the case of Mr. Somers vs. Pettit, in which Mr. Baldwin was Plaintiff's Attorney, and judgment by default was obtained in the same manner, he (the Solicitor General) was Counsel for the defendant, and did all he could to obtain relief against the judgment, but in vain; and the judgment was confirmed.

Mr. Beardsley, a member of the committee and also a Barrister and Attorney, states that it is perfectly notorious that the practice was so under the rule of court, and that he heard many cases where the judgments were so obtained.

Mr. Boulton also produces his dockets, shewing that his proceedings for clients in similar cases were precisely such as took place in his action against Mr. Randal.

In particular he shews a cause in which he was plaintiff's attorney for James Samson Esqr. against the Hon. Willia n Dickson a member of the Legislative Council, whose residence in the town of Niagara was known to every person, in which cause the proceedings were just such as those of which Mr. Randal complains.

Mr. Boulton also produced a writ certified by the Clerk of the Crown of judgments against Mr. Randal in other causes which were depending against him at the time he pressed the payment of its bond; among these is a case of Thomas Clark vs. Robert Randal, in which judgment was obtained for £415-13 04. In this case the Att'y General was concerned for the plaintiff, & as he states that Mr. Boulton had obtained judgmentagainst Mr. Randal ashort time be-

fore Mr. Clark's could be entered up—& that he looked into the proceedings with a desire to set them aside if he could to prevent his obtaining precedence of Mr. Clark, but finding them in accordance with the ordinary practice of the court as it appeared to him, he concluded there was no ground.

MR. McDonald M. P. P., called in and examined.

Mr. Boulton related to him that Mr. Randal had informed the committee, that he (Mr. McDonald) had stated to Mr. Randal, that the advertisement of the Sheriff's sale of Mr. Randal's lot, was put up with the face to the wall, and on the back written, "a watch to be raffled for" and Mr. Boulton asks Mr. McDonald if the fact was so, or if he ever stated such a thing to Mr. Randal.

Mr. McDonald states that he never saw, never heard of or saw any thing of the kind and never did state any such thing to Mr. Randal; at least that he would swear that to the best of his recollection he never made any statement of the sort.

MR. Hornor, M. P. P., called in by Mr. RANDAL.

Says that he heard Mr. Randal say four years ago that Mr. McDonald had made the statement respecting the advertisement mentioned above; but he never heard Mr. McDonald say so.

Committee met again-

Tuesday Feb. 26 1828.

PRESENT:

Messrs. Beardsley, Chairman, Rolph, and Attorney General.

Mr. Justice Sherwood attended at the request of the Committee, and being examined in presence of the Petitioner, states he has been at the Falls on the Ottawa river; knows No. 45 in Nepean; it was sold at sheriff's sale at the suit of Mr. H. Boulton, Capt. Le Breton was purchaser at sheriff's sale: soon afterwards, thinks within one or two days after, he, Mr. Sherwood became purchaser from him of part: thinks the sale was in December. 1820. On the evening of the sale as he thinks, Captain Le Breton came to him at Brockville, and stated, that a valuable lot was to be sold at Sheriff's sale, situate on the Ottawa where he Le Breton resided, that he wished to become the purchaser, but was not sure he had sufficient money, as other persons he understood had come in, intending to buy, the proposed to Mr. Sherwood to join him in the purchase, or to lend him money to enable him to buy. He stated to Capt. Le Breton that he was not inclined to buy land at that time, but that he would enquire about the lot in question; that at any rate he would take part of the lot from him if he bought it, or would advance him the purchase money if he would give him security.

Mr. Sherwood was present at the sale, but did not bid. Captain Le Breton bought it; there were other bids, and thinks lands of other persons were sold on the same day by the Sheriff in presence of the same bidders. Thinks between twenty and thirty persons attended, had seen the Sheriff's advertisement of the sale under Mr. Boulton's execution be-

D

fore Captain Le Breton came to him, but knew nothing of the particular lot, and a day or two after the sale, he took from Le Breton a conveyance of half his interest in the lot, (an undivided moiety) and became responsible to the Sheriff for the purchase money, of which Captain Lo Breton subsequently paid his half to Mr. Sherwood; the amount bid for the lot was £149, to the best of his recollection.

He does not know that any person united with Captuin Le Breton in the purchase at Sheriff's sale, but thinks there was not; a partition was made some months after he took the deed from Captain Le Bre

ton as Tenant in common.

Captain Le Breton has sold part of his moiety, as he thinks to one Bellows. He (Mr. S.) has not yet sold any part of his portion, except that he made an exchange with Capt. Le Breton of a small part after partition was made.

He has laid out the front of his proportion of the lot into small lots and Capt. Le Breton he has been told, has done the same, has never understood what price Capt. Le Breton has put upon his share of the land. An application was made to him from the Quarter Master General's office, at the desire as he understood, of the Commander in Chief, for a purchase of a part of the lot, this was some time after the sale to him, has understood that a proposal was also made to Capt. Le Breton at Quebec by the Commander in Chief, which however did not end in any thing satisfactory.

Does not know what price was offered to Capt. Le Breton, no specific offer was made to himself.

Considers the lot valuable from its situation affording a good landing place at the head of the navigation, and there is a good mill site and perhaps several on the lot; the land is in general rough. There is a town he understands laid out near it called Bytown, and it is probable that that circumstance renders the lot of less value than it has been supposed to be, when he was last at the lot there were two government storehouses built of logs on the lot, and a small dwelling house near that, kept there as an Has heard since, that a good house has been built by one Bellows a Merchant, where he believes an Inn is now kept, and there is also another house in which one Rollister lived, who likewise kept an Inn, and has heard that another house has also heen built there, one Frith is living with Barry in the house first spoken of.

To questions put by Mr. Boulton, states that he never understood the sale was irtended to be kept secret by the Sheriff, has heard the Sheriff say that he sent advertisements to Nepean and Perth and to several parts of the District, has no idea that the Sheriff was at all aware of the value of the lot No. 40; he (Mr. S.) knew nothing of it till informed of it by Le Breton.

In 1821, Mr. Randal came to him (Mr. Sherwood) at York, and spoke to him respecting the sale, saying that he understood the land had beer sold, and that he was aware that he, Mr. Sherwood, owned part of it. Mr. Randal appeared to be dissatisfied with the judgment which had been obtained against him, saying that Mr. Boulton had not treated him well; he said that he had no knowledge of the sale till he was told of it, during the sitting of the Legislature then in session, by Mr. Morris or some other person.

At a subsequent Sheriff's sale of Mr. Randal's lands at the suit of Mr. Clark, he Mr. Sherwood bought No. 11 in Nepeun on the Rideau, does not recollect the price; it was he thinks under £20, nearer ten than twenty; the quantity of land was somewhere about 60 or 70 acres; had this lot been offered to him in 1816 or 1817, he would not have given a dollar an acre for it, but it might have been worth much more.

When he understood a question had been made about the land (No. 40) being properly advertised, by the Sheriff, he took pains to enquire; and so far as he can depend on the statement of the Sheriff, his belief is, that the land was as well advertised as Sheriff's sales usually were then, which was before the passing of the statute on that head in 1822, and more regularly than they sometimes were in other cases, no fact has come to his knowledge to lead him to think otherwise, but the reverse.

Robert Baldwin, Esq., a Barrister Attorney attended. Recollects the rule of court under which it is stated the interlocutory judgment in Boulton vs. Randal was signed; was a Clerk in his father's office at the time the rule spoken of was caused to be in force, the practice was then agreeable to the rule, whether such practice was consistent with the statute or not he could not then judge. Remembers the cause of Sommers vs. Pettit, in which his father (W. W. Baldwin, Esq.) was attorney for the plaintiff, and Mr. Boulton for the defendant: upon reference to his father's docket, he finds that interlocutory judg-ment was signed under the same rule of court as in Boulton vs. Randal; knows Mr. Boulton exerted himself as much as possible for the defendant, but the judgment was finally entered on the assessment. That cause was an important one as to value; the judgment was for about \$500. The interlocutory judgment was for about £500. The interlocutory judgment in Sommers and Pettit was signed 29th July, 1820: demand of plea was put up in the Crown office on 26th July, and affidavit filed that defendants place of residence in the Home District was not known to the deponent. Upon questions put to Mr. Boulton by Mr. Randal, Mr Boulton states, that he was retained by Mr. Randal in Randal vs. Phelps and received five guineas, and that Mr Justice Boulton claimed £50 for his services rendered to Mr. Randal when he was at the Bar which formed part of the sum for which the bond was given.

Mr. Randal being asked by Mr. Boulton, whether an account of which a copy appears published in the Coionial Advocate of June 26, 1825, was not furnished by him to the Printer; and whether he Mr. Randal did not receive such an account from Mr. Boulton; he says he has no doubt it is so. Being asked as to the services specified in that account, he does not deny that they were rendered, and does not remember whether he ever objected or not to any of the charges made.

### Mr. Boulton to Mr. RANDAL.

York, 8th July, 1819.

Sin:—From what has occurred I suppose you do not wish me to advocate your two causes at the next assizes, if that is the case, I should wish to know it immediately, as it will save me some trouble. Indeed

I am not very anxious to be the advocate of a person who is so very illiberal in his sentiments, because I should expect (from the specimen in your former letter) that should all my efforts prove of no avail, you would accuse me of not sufficiently exerting myself, and allowing the other side, from improper motives, to obtain undue advantages.

At all events, in order that I may not subject myself in future to the like treatment & similar observations, I shall expect the fee with my brief to be advanced, which will preclude all misunderstandings.

If possible to be procured you should have the original note upon which the judgment in Mr. Clark's suit we sobtained. You had better write to some of your friends in Montreal, to apply to the officer of the court for it, who peakens will give it up. the court for it, who perhaps will give it up.

Your obedient servant, H. J. BOULTON.

To ROBERT RANDAL, Chippawa.

York, May 24th, 1819.

SIR:—I received your most extraordinary letter of the 17th inst., by Mr. Smith, which if there is any meaning at all to be given to it, is a very impertment one, and such an one as I will not permit you or any other client to write to me with impunity. I would have you to understand, that I am not rendering you any professional assistance from what you may fancy popular reasons, & therefore any further than my duty to my client prompts me, I do not carea farthing about You gave me what I expected at the time to be a security for £100; half for my own benefit and the other for my father's. This security I find not worth half a dollar per acre, as there are no inhabitants in the township. In addition to which, I have your note for £25 due on the first of this month, both which sums, with interest, amount to nearly 1407 & the security I have, independent of your personal responsibility, is not sufficient to guarantee the payment of one half that sum : & as I am not looking to the result of your business, as you call it, for my payment, I insist upon having the money, long due to me for services already performed, paid or secured in a sufficient manner. Were you unable to do either, I should not perhaps expect or wish it, but in proportion as you oppose giving me what I have a right to so in proportion shall I insist on it, as you can have no honorable or just reason for withholding it. If you will pay me down £50, so as to lessen the burthen upon the land, I will accept it, and let the remainder stand as it does. I return the cognovit for your signature, and patiently wait the return of the post. Mr. Jarvis, I fancy will hand you this, who will give you a receipt for any money you may pay him. You may be certain I shall not retract one farthing.

Your obedient servant,

H, J, BOULTON.

Mr. RANDAL, Chippawa,

Charles Fothergill vs. Peter Bice of the District of Newcastle.

13th July, 1819.—Appearance entered, per statute 60 Geo. 3d.

13th July, do.—Affidavit of non residence of debt filed with a demand of plea.

17th, July, 1819.—Interlocutory Judgment filed.

GEORGE S. BOULTON,

for Plaintiff.

Absalom Sommers vs. Thomas Pettit.

19th July, 1820.—appearance, per Statute, entered, by Plaintiff, for debt.

26th July, 1820.—Affidavit of non residence sworn and demand of plea put up in the office.

29th July, do.—Interlocutory judgment signed, for want of a plea.

Michaelmas Term.-Motion for new trial on payment of costs refused.

Verdict £490.

W. W. BALDWIN, for Plaintiff.

Heron vs. Dewitt.

10th January, 1820.—Appearance per Statute.

25th January, do.-Demand of plea put up in

Affidavit of non residence allowed in bill of costs.

31st January, do .- Interlocutory judgment sign-

Notice of assessment of damages put up in the

W. W. BALDWIN. for said Plainiff.

Adam L. McNider and John Forsyth vs. John Clark do. debt on bond £150.

JOHN B. ROBINSON,

for Plaintiff.

16th January, 1821.—Appearance per Statute.

22d January, do.—Interlocutory Judgment upon an affidavit of non residence, and demand of plea, as appears by the bill of costs.

24th March, 1821.—Final judgment signed without any rule to refer Bond to the master or assessment of damages.

I certify the above proceedings to be correct, as appears by the papers now in the Crown Office.

JAMES E. SMALL, Deputy Clerk of the Crosen.

I certify that the broken lots, Nos. 10 and 11, in the 1st concession on the River Rideau in the Township of Nepean, were given in the grant to Robert Randal Esquire, containing 100 acres. By the plan they appear to contain somewhat more, that is to say, the broken lot, No. 10 about 50, and the broken lot, No. 11, about 78 acres. THOMAS RIDOUT,

Surveyor General.

Surveyor General's Office York,

14th February, 1828.

To whom it may concern.

I ROBERT RANDAL, of the Township of Stamford, do swear that I truly and bona fide have such a freehold estate situated in the following places:—the place known by the Bridgewater Works in the waters of the Niagara River, between the mouth of the River Welland and the Great Falls in the Township of Stamford, District of Niagara; four frame dwelling houses, under two stories, with not more than two fire places; twelve hundred acres of lan, being the North part of i. Lots No. 15, 16, 17, 18, 19, and 20 on the South side of the River Well and in the township of Wainfleet, District of Niagana; compensation allowance for the destruction of the Bridgewater Works in the late war with the United States of America. detained in the hands of this government by my order, (four thousand pounds); seven hundred and twenty-six acres of land, lots Nos. 38, 39, and 40 in the first concession from the Grand or Ottawa River, and the broken fronts of said lots, in the township of Nepean in the County of Carleton, District of Bathurst; 450 acres of land, broken lots No. 10 and 11 in the 1st concession lot No. 11, and the Eastermost or front three fourths of Lot No. 10 in the 2nd concession, upon the River Rideau, Township of Nepean, County of Carleton, District of Bathurst; 400 acres of land, lots No. 11 and 12 in the 8th concession of the Township of Matilda in the County of Dundas Eastern District, 400 acres of Land, Lots Nos. 10 and 11 in the 6th concession of the Township of Young, County of Leeds, District of Johnstown, over and above all incumbrances that may effect the same; and am otherwise qualified according to the provisions of the Law to be elected and returned a member of the Commons House of Assembly, according to the tenor and true meaning of the Act of Parliament in that behalf; and that I have not obtained the same fraudulently for the purpose of enabling me to be returned member to the Commons House of Assembly.

So help me God. (Signed) ROBERT RANDAL.

::: Sworn before me at) Stamford, in the county of Lincoln in the District of Niagara, this 26th day of July, 1924.

(Signed) RICHARD LEONARD.

Returning Officer, District of Niagara.

I Richard Leonard, Esq Returning Officer for the County of Lincoln, in the District aforesaid, do certify, that on the 26th day of July inst. Robert Randal of the Township of Stamford, did duly make and subscribe before me, Returning Officer as aforesaid, the within written oath of eligibility.

Given under my hand ) at Stamford this 31st day of July 1824.

> (Signed) RICHARD LEONARD. Returning Officer. 2011年 15年 (12) 新行

Lecrtify that the foregoing are two copies of the oath of eligibility of Robert Randal Esq., and of the certificate of Richard Leonard, E-q., the Returning Officer now filed of record in the Crown Office.

In testimony whereof I have hereto set my hand and affixed my seal of office this 8th day of February, in the year of our Lord, 1828.

JAMES E. SMALL. Deputy Clerk of the Crown.

Know all men, by these presents, that I Robert Randal, of the township of Stamford, in the Disict of Niagara, gentleman, am held and firmly bound to Henry John Boulton, of the town of York, in the Home District, Esq., in two hundred pounds of lawful money of Upper Canada, to be paid to the said Henry John Boulton, or his certain attornies, executors, administrators or assigns, for which payment, to be well and truly made, I bind myself, my heirs, executors and administrators, firmly by these presents, sealed with my seal, and dated the seventh day of July, in the year of our Lord one thousand eight hundred and eighteen.

Whereas, by an indenture bearing date the 17th March, 1817, the said Robert Randal, mortgaged unto the said Henry John Boulton, all that parcel or tract of land, isituated, lying and being in the township of Nepean, in the District of Johnstown, containing, by admeasurement, 200 acres, more or less, being Lot number 11, in the first concession. (on the Rideau) of the said township of Nepean. which is more particularly described in the original grant from the crown, of the said parcel or tract of land, to the said Robert Randal, and which said indenture of mortgage is meant as a security for the due payment of the sum of £100 of lawful money of Upper Canada, by the said Robert Randal, to the said Henry John Boulton, with lawful interest from the date hereof, and, whereas in the said indenture of mortgage, there is not contained any covenant for the due payment of the said sum of £100, as aforesaid, according to the true intent and meaning of the said parties, now the condition of this obligation is such, that if the above bounden Robert Randal, his heirs, executors, or administrators, do and shall, well and truly, pay for cause to be paid unto the above named Henry John Boulton, his heirs, executors, for administrators, the full sum of £100, of lawful money aforesaid, with lawful interest for the same, from the 17th/March, 1817, on the first day of January, next ensuing the date of the above written obligation, then this obligation shall be void, otherwise the same shall remain in full force. RANDAL.

Sealed and delivered in the presence of JAMES BOULTON. G. S. BOULTON.

(Copy of the promissory note.)

In testimony whereof, I have hereto set my Hand and affixed my Seal of Office this first day of August, in the Year of Our Lord One Thousand Eight Hundred and Twenty-eight.

JAMES E. SMALL. [G. R.]

Deputy Clerk of the Crown.

#### No. 1.

IN THE KING'S BENCH.

Henry John Boulton, Plaintiff, ) This action was commenced by a Robert Randal, Defendant Writ of Summons in a plea of debt, issued from the Crown Office at York, in the Home District, on the thirty first day of May, 1819, returnable the first day of Trinity Term, 1819, being the fifth day of July of that year. This summons, with the declaration annexed, was filed in the said Crown Office on the 13th day of July, 1819, with an affidavit made by Samuel P. Jarvis, before Thomas Dickson, on the 24th day of June, 1819, stating that the same was served on the defendant by the deponent, on the 22nd day of June of the same year. On the said 13th day of July, 1819, an ppearance for said defendant in said cause was entered in said office by said plaintiff, and on the same day an affidavit made, on the 13th day of July, 1819, before John Small, Clerk of the Crown, by the present Honourable James B. Macaulay, then a student at law with the said Henry John Boulton, stating that the place of residence of the defendant, in the Home District, was unknown to the deponent, and also a demand of plea were filed in the Crown Office. On the 17th day of July, 1819, interlocutory judgment was signed, and final judgment entered for two hundred and twenty-five pounds debt, and five pounds three shillings and eight pence damages and costs, amounting altogether to the sum of two hundred and thirty pounds. On the fifth of October, 1819, a writ of fieri facias, against the goods and chattels of the defendant was issued upon a procipe filed by the plaintiff, directed to the Sheriff of the Home District, returnable on the first day of Michaelmas Term following, being the first day of November, 1819. This execution, with a return of nulla bona, by the Sheriff of the Home District, was filed in the said Crown Office on the return day, and on the same day a writ of fieri fa-cias against the defendant's lands and tenements was issued (upon a præcipe filed by the plaintiff) directed to the Sheriff of the Johnstown District, and returnable the last day of Michaelmas term, 1820, which writ was filed in the said office on the 17th day of March, 1825, with the following return by the Sheriff of the Johnstown District.

By virtue of the writ to me directed, I have caused to be made by the public sale of the lands and tenements of the within named defendant, Robert Randal (that is to say) lot number forty, in the first concession of Nepean, in the Johnstown District, together with its broken front, in front thereof, on the Ottawa or Grand River, the debt

E

and damages therein mentioned, which I have ready before the Lord the King, to be rendered to the said Henry John Boulton, for his debt and damages aforesaid, as within I am commanded.

J. SMALL, C. C.

Upper Canada, | George the Third by the Home District, &c. | grace of God of the United Kingdom of Great Britain and Ireland King, Defender of the Faith.

(L. S.) To the Sheriff of the Johnstown District,

GREETING:-Whereas we lately commanded our sheriff of the Home District that of the goods and chattels of Robert Randal in his district he should cause to be made as well a certain debt of two hundred and twenty five pounds which Henry John Boulton lately in our court before us at York recovered against him as also five pounds three shillings and eight pence which in our said court before us were awarded to the said Henry John Boulton for his damages which he had sustained as well by occasion of the detaining the said debt as for his costs and charges by him laid out about his suit in that behalf whereof the said Robert Randal was convicted as appeared to us of record and that he should have that money before us at York on the first day of Michackness term then next to render to the said Henry John Boulton for his debt and damages aforesaid. And that he should have then there that writ: And our said sheriff of the Home District at that day returned to us that the said Robert Randal had not any goods or chattels in his district whereof he could cause to be made the debt and damages aforesaid, or any part thereof whereupon on the behalf of the said Henry John Boulton, it is sufficiently testified in our said court before us that the said Robert Randal hath sufficient lands and tenements in your district whereof you may cause to be made the debt and damages aforesaid and every part thereof, therefore we command you that of the lands and tenements of the said Robert Randal in your district you cause to be made the said debt of two hundred and twenty five pounds and the said five pounds three shillings and eight pence the damages aforesaid and that you have that money before us at York on the last return day of Michaelmas term next to render to the said Henry John Boulton for his debt and damages aforesaid and have then there this writ.

Witness the Honorable William Dummer Powell Chief Justice at York this first day of November in the Sixtieth Year of our Reign.

JOHN SMALL,

Clerk of the Crown.

H. J. Boulton, In person.

Indorsements on the above.

By virtue of this writ to me directed I have caused to be made by the public sale of the lands and tenements of the within named defendant Robert Randal that is to say lot number forty in the first concession of Nepean in the Johnstown District together with its broken front thereof on the Ottawa or Grand River the debt and damages within mentioned which I have ready before the Lord the King to be rendered to the said Henry John Boulton for his debt and damages aforesaid as within I am commanded.

Levy indorsed on writ £484 4 10, besides sheriff's fees, &c.

Sheriff's return on a writ of fi. fa. against the lands of Robert Randal, Esq. at the suit of Thomas Clark, Esq. issued 17th January, 1830, and filed in the Crown Office, 7th Sept. 1825.

By virtue of the writ horeunto annexed I have caused to be made of the lands and tenements of the within named Robert Randal the sum of thirty three pounds eleven shillings & four pence, which money I have ready before the Lord the King at the day and place within contained to render to the within named Thomas Clark in part of his damage within mentioned, and I further certify that the said Robert Randal has not any other or more lands and tenements in my District whereof I can cause to be made the residue of the damages aforesaid.

The answer of

RICHARD LEONARD, PETER T. PAWLING. Deputy Sheriff:

#### No. 12

Whereas Robert Randal has by petition complained that he has suffered great loss and injustice under a judgment obtained against him in the Court of King's Bench in this Province by Henry John Boulton, Esquire, His Majesty's Solicitor General, which judgment the petitioner alleges was obtained against the rules of law and equity; and whereas adequate relief cannot be afforded by the said Court of King's Bench, and it is therefore expedient that an enquiry should be made into the wrongs alleged and right be caused to be done, if upon the enquiry under oath it shall be made to appear that such great injustice has been done. Be it therefore enacted by the King's Most Excellent Majesty &c. that it shall and may be lawful for the Hon. John Walpole Willis one of His Majesty's Justices of the Court of King's Bench in and for the Province of Upper Canada under and by virtue of this Act at York in the Home District to enquire into the truth of the statements in the said petition set forth, and for the purpose of that enquiry it shall and may be lawful for the said Hon. John Walpole Willis in the presence of the parties or their Attornies or such of them as shall after due notice appear, to summon and examine upon oath all witnesses deemed necessary for the attainment of justice between the parties and to enable the said Hon. John Walpole Willis to inform his judgment in making his decree or decrees as hereinafter mentioned and any person convicted of wilful false swearing before the said Hon. John Walpole Willis under this Act shall be liable to the same punishment as is now inflicted by the laws of this Province upon persons guilty of perjury.

And be it &c. That the aforesaid matter shall be heard and determined and the witnesses examined

in an open Court whereinto all His Majesty's subjects shall have free access. Provided always that it shall and may be lawful for the said Hon. John Walpole Willis to commit any person for a contempt of the Court for a period not exceeding one month and to fine such person a sum not exceeding fifty

And be it &c. That it shall and may be lawful for the said Hon. John Walpole Willis having heard the said petitioner and the said Henry John Boulton and such other persons as he the said Hon. John Walpole Willis shall summon, or such of them as shall appear after due notice to make such decree or decrees for either the confirmation or the reversal of the said judgment and of the proceedings had there-upon and of any sales of land heretofore made under and by virtue of the said judgment as he the said Hon. John Walpole Willis shall deem necessary for the doing of justice between all parties interested in the matter.

And be it &c. That any decree made by the said Hon. John Walpole Willis under and by virtue of this Act shall be obligatory and binding upon the person against whom or in whose favor the same shall be made, and if any person against whom or in whose favor any decree shall be made shall neglect or refuse to comply therewith, it shall and may be lawful for any person interested in such decree to have the same registered, which decree so registered shall have the same virtue and effect as if the said decree had been literally obeyed.

And be it further enacted &c. That every decree made by the said Hon. John Walpole Willis, shall be under his hand and seal, attested by two witnesses and made on or before the first day of January

And be it further enacted &c. That upon the production of any decree aforesaid and a copy thereof to the register of any county or riding in this Province in whose county or riding the land in the said degree mentioned shall lie, and upon an affidavit made before such register or his deputy or any commissioner of the King's Bench for taking affidavits, of the due execution of the said decree or decrees before such register it shall and may be lawful for him to register the said decree in his office and to file a copy thereof and for such registry and filing to demand and receive the sum of one pound.

And be it further enacted &c. That it shall and may be lawful for the said Hon. John Walpole Willis to award against either of the parties such costs and charges as he shall deem right and just and for the recovery of which costs and charges so awarded, it shall and may be lawful for the party interested to proceed by action of debt in any Court of Record in this Province.

YEAS—Beardsley, Beasley, Clark, Fothergill, Hamilton, Hornor, McBride, McCall, Perry, Thompson of York, Thompson of Frontenac, Walsh, Wilkinson, and Wilson, 14.

NAYS-Messrs Attorney General, Burnham, Cameron, Coleman, D. Jones, J. Jones, McDonnell of Prescott & Russel, McDonell of Glengary, McLean, Morris, Scollick and Vankoughnet, 12.

YORK, 19th July, 1828.

An action of Ejectment is brought by Mr. Sherwood against one Firth, who is in possession of part of the lot at Point Nepean, on the Ottawa River, which you complain has been illegally sold under an execution against you. I am defending the action and have instructed Mr. Radenhurst of Perth, to manage the defence at the trial. If the sale was illegal for any cause stated by you, and more particularly for want of being fairly advertised, you have now an opportunity to take the opinion of the Court upon it, by enabling Firth to urge that objection against the Plaintiff's title.

The Assizes for Perth commence on the 18th August. Any evidence you can furnish on the subject, or any professional assistance which you may desire to engage, Mr. Radenhurst will willingly avail himself of.

I am,

Sir, Your obd't serv't.

JOHN B. ROBINSON.

ROBERT RANDAL, Esq.

No. 14. Perth, 23d August, 1828.

ROBERT RANDAL, Esq.

Dear Sir;

I received your several letters with the documents enclosed, respecting the suit of Doe ex dieu Sherwod vs. Frith and Berrie, for part of the land formerly your property at Napean Point. Many of the papers you sent were entirely useless, as the Judge would not permit evidence to show how the judgment in Boulton's suit was obtained. Nor could I, in addressing the jury (as you wished) allude to that circumstance, but was entirely confined to what was put in evidence by the plaintiff, viz: the judgment executions and sale, and even in this I was once or twice interrupted by the opposite counsel, and censured by the Court, for what they considered exceeding my bounds.

I objected, as you requested I should, to the trial proceeding at all, which the Judge paid no attention to, as he considered it was casting a censure on the conduct of the Court of King's Bench, which he could not listen to. The plaintiff did not produce any notice of the sale whatever, nor show that any such was given previous to the sale taken place.—Upon this and some other points, I moved for a non suit, and the Judge reserved the point. We were also anxious to show that Colonel By required the property for the Government use, for the purpose of the Rideau Canal; this evidence the Judge refused receiving. In fact, he seemed unwilling that any point that could operate in yours or the tenant's favour should go to the jury; and as the jury at that assize were persons little acquainted with their duty or with courts of law, they implicitly followed the directions of the court, which in this case was for the plaintiff, and gave a verdict accordingly.

1 remain

Your ob't serv't,

THOS. RADENHURST.

No. 15.

TOWN OF SHERWOOD.

In consequence of the decision of the Court of King's Bench held at Perth on the 20th instant, proving the subscriber's indisputable title to that valuable tract of land, in the Township of Nepean, formerly known by the name of the Richmond Landing (at present the town of Sherwood) and adjoining to Bytown. Reports, prejudicial to the title of said land, having been maliciously circulated by a personage of high rank and resonsibility, have heretofore pre-vented the subscriber from disposing of said land. The situation is most beautiful and salubrious, being on the south side of the Chaudiere Falls, with the Grand Union Bridge abutting on the centre of the front and leading through the main street. It is replete with mill sites, and for commerce no situation on the River Ottawa can equal it. The subscriber is determined as much as possible to confine his sales to persons of respectability.

JOHN LE'BRETON.

Britannia, Ottawa River, 26th August, 1828.

UNION HOTEL.

Chaudiere, Upper Bytown.

Firth and Berrie beg to make their most grateful acknowledgments for the very liberal patronage and support they have received from their friends and the public, for the long period of nine years, of which it will be their earnest study to merit a continuation, by contributing to the utmost of their means and power, to the comfort and accommodation of those who favour them with their countenance and support.

The romantic and highly picturesque situation of the Union Hotel, which commands a most interesting view of the mountains and scenery in the vicinity of Hull. The islands and banks of the noble Ottawa—the magnificent Falls of the Chaudiere, over which bridges are now about completed; and the works and improvements in Upper Bytown will render this place a delightful retreat either to the delicate invalid or scientific tourist.

The accommodations will be of a superior kind: the table will be furnished with the choicest viands that the season and the situation of the country will afford; and the wines and liquors will be of the best quality that can be procured, either at Bytown or from the most respectable dealers in Montreal.

Bytown, 1st September, 1828.

### No. 16.

Lot No. 40, in the first concession of the Township of Nepean, with its broken front was sold by Sheriff's sale, on the eleventh day of December, 1820, at the suit of Henry John Boulton, Esq. and purchased by John Le Briton, Esq. for the sum of £449 currency.

A. M'MILLAN.

The Lots No. 38 and 40 on the Ottawa, and No. 10 on the River Rideau, were all sold by the Sheriff's order in the Court House, Brockville, and purchased by L. P. Sherwood, Esq.

R. SHERWOOD.

## PLAN.

Please call on Captain Collins, near the mouth of the Jock on the Rideau and he will show Major Randal the front of lot No. 10 and 11 drawn by him.

Major Patton, Register Office, Prescott.

No. 18.

Register Office for the Counties of Leeds, Grenville & Carleton.

ELIZABETHTOWN 5th February, 1811.

I hereby certify that no memorial of any deed, conveyance, or other incumbrance from Robert Randal, to any person whatever, appears registered in the Books of this office affecting the following parcels of land, that is to say, lots No. 10 & eleven in the sixth concession of Yonge, broken lots, No. 10 and 11, in the first concession of Nepean, lot No. 11 in the second, and the easternmost, or front, three-fourths of lot No. 10 in the second concession of Nepean.

LEVIUS P. SHERWOOD.

Register.

Copy,

No. 19.

CORNWALL, October 8th, 1807.

Dear Sir;

I enclose you two petitions, one for two hundred acres of land, agreeable to the regulation of the Province, providing for settlers; also one for a lease of lot No. 39, in the first concession (or.) front of the Ottawa River, opposite to the Falls, known by the name of the Chaudiere, in the Township of Nepean, a short distance above the mouth of The petition for two hundred the River Rideau. acres, as a settler, I have left a blank for you to fill up, agreeable to the instructions hereby given. If No. 39 is a reserved lot, as I presume it is; and if there be a broken front, which I also think there is, and likewise a broken front to lot No. 38, lying adjoining No. 39, on the upper side, and should there also be a broken front on No. forty, adjoining No. 39, on the lower side-provided those fronts will be sufficient to fill my claim for two hundred acres, you will please to lay my petition upon the said broken fronts, comprehending all water privileges as far as the channel of the Ottawa or Grand River, including all lands between the channel of said River and the banks of the main, from the west line of lot No. 39, running ten chains below the East line of lot No. 40.

This, Sir, requires an explanation. There are four small islands at or near the Chaudiere falls, which lays so situated as to make them actually necessary to be procured for the purpose I have in view, which is to extend a dam, from the main bank to the upper island, laying at the falls, and taking the water between the main and said islands, for the purpose of a grist and saw mill. The Ottawa River is very narrow at the Chaudiere falls, therefore you will find the distance to be but short, from the main to the channel of the river, and the quantity of acres which those islands contain cannot exceed 20, but government not having it in their power to grant islands, makes it necessary to apply in this way as government can make a grant in this way that will be as effectual as if the islands were expressed in the deeds, but should the broken fronts of lots No. 38, 39 &40 not be sufficient to fill my claim, you will please to lay the claim upon the broken fronts, let there be what quantity there may and let my peti-tion lay open for the deficiency to be laid in some other place. Provided that lot No. 39 should not be reserved for the clergy and that lots No. 38 & 40 should not be granted please to lay my claim upon as much of the fronts as the same will cover comprehending the privileges of the waters of the river and bound by the channel of said river as already described, provided there should not be broken fronts to the aforesaid lots and that 38 & 40 have already been granted, and should No. 39 be reserved for the benefit of the Crown endeavor to prevail on government to allow my claim to cover it; with the privilege of said waters and islands as described .-But should government not allow my claim to cover No. 39, and should the said Nos. 38 and 40 be already granted; as likewise there may not be any bro-ken fronts; in that case take out a lease for me for No. 39 and endeavor to get a grant from the bank of the west line of No. 39 running to the channel of the river, ten chains below the East line of Lot No. 40 to the main bank including all lands, which is those small islands. I have enclosed my bond together with my bondsmen, for the annual payment of the lease; you will also call upon Captain Farquharson for my letter directed to Thomas B. Gauf, Esq. who Mr. Chewett says was at New York and had not returned when he left home-You will get Captain Farquharson to open my letter favored by Mr. Burns to Mr. Gauf in order that you may get my certificate as having taken the oaths required by government.— Should Capt Farquharson not be in possession of my letter to Mr. Gauf please to call on Mr. Burns, (I think his christian name is William) I had the pleasure to see him at Cornwall on his way from Quebec to York on the 8th July last. I enclose you a guinea, and, as I am informed that most of the landed business sent to your care is conducted through the different offices by your son, and further reasonable charge he may make shall be cheerfully paid by a draft at sight or otherwise in favor of any person in Connwall. As government is knowing to my arduous undertaking at the Bridgewater Works, near the Falls of Ningara, and my perseverance in this kind of business I flatter myself the Governor in Council will be disposed to encourage me all in their power in commencing business at the Chaudiere Falls on the Ottawa River; it will be the means of settling the wild lands on that River, that is at this

present a perfect wilderness, not one settler inhabiting the country; it will be the means of settling the lands upon that line of the Province which I conceive to be much required. The fees required in getting out my patent if in your power to procure one I shall pay to your order in Cornwall on demand. You will greatly oblige me to hasten the business as much as in your power, and forward the deed and lease by the first safe opportunity that may offer, as I am very anxious to get out my timber and build my dam before the freezing of the waters.

I fully expected my letter would have found my friend Mr. Gauf in York on Mr. Burnes' arrival, and expected at all events to have heard from my business by you when last down at Cornwall Court at my return from Quebec. The acquaintance which I have had the honor to have with you, makes me trust you will use your interest for me. You can observe to the Governor that the Parish of Cornwall must also feel itself under a small compliment, for having built the church.

Relying upon your usual goodness, I subscribe myself,

> Your most obed't, and humble Servant,

ROBERT RANDAL. (Signed)

A true copy.

ROBERT RANDAL.

D'ARCY BOULTON, Esq.

No. 20.

Dear Sir;

I enclose you a draft drawn by Mr. Chewett on the Receiver General at York, for £296, Halifax Currency, which you will please to apply towards the payment of the fees, should a grant for 200 acres of land be made to me by Government; but should Mr. Gauf have returned from New York, and has laid my memorial before the governor in Council, you will please to give the enclosed draft to him for the aforesaid purpose. Mr. Chewett leaves this place much later than I expected. Should my business be done through you or Mr. Gauf, you will be very obliging by writing mediately what Government is likely to do; but should you obtain the lease and grant, I will acknowledge it a great favour to have them sent to me quick as possi-ble, as I am very desirous to build a house at the place before the winter sets in, in order that I may be preparing timber, and making necessary arrangements for my works.

With great respect, Your humble serv't,

A true Copy,

(Signed) ROBERT RANDAL. ROBERT RANDAL.

D'ARCY BOULTON, Esq.

P. S. Should 38 and 40 be granted, please for to write me in whose name they are granted.

No. 21.

YORK, July 22nd, 1808.

Dear Sir;

I am sorry to inform you that lot No. 38 and 40, first concession, on the Ottawa, were both taken up. No. 40, by Epr. Jones, Esq., and 38 by Mrs. Jessnp, four or five years ago. No. 39 is a reserve, and you are the first applicant. I this day endeavoured to get it through the Council; but when it was referred to the Surveyor General to report what sort of timber was on it, they would not say, so you will be so good as to get some respectable man to look at the land and make oath before a Magistrate what the timber is or get a Magistrate to certify it.

We wrote you before, but we supposed the letter miscaried, and now we resume our old one.

I have the honour to be,

Your most ob't serv't,

H. J. BOULTON.

I suppose you do not wish now to have your Petition presented, as cannot get the lots you wished. My father is of opinion you may run your dam across to the island without any apprehension of being disturbed.

H. J. B.

No. 22.

Cornwall, June 23d, 1808.

Sir.

I received a letter from your son, H. Boulton, dated July 2d, informing me that lots No 38 and forty, first concesssion, on the Ottawa River, in Township of Nepean, are granted, and that some requisites are required before a lease can be taken for No. 39. But his saying nothing respecting the broken fronts adjoining to those numbers, which was the land 1 wished you to apply for, and to cover them by my claim should they not be granted, makes me suppose you have not understood the tenor of my letter; I have therefore empowered my friend Mr. Rudsdell to act for me, in the business; any as sistance you can give him, will greatly oblige me. You will please to fornish him with my writings committed to your care.

I am, Your humble Servant, acing a constant collection of the ROBERT RANDAL.

D'ARCY BOULTON, Esq.

N. 23.

在李. 14-648年3月

Mr. Randall's instructions to Mr. Rudsdell, in behalf of the business committed to his care at York.

Mr. Rudsdell will please call at the Executive Council Office as soon as he may arrive at York and enquiregof the Clerks whether a petition has been laid before the Council in behalf of Robert Randal, for 200 acres of land agreeable to the regulations providing for settlers, and if so, whether the same has been acted upon and what the decision was. Should Mr. Rudsdell find there has not been an application made to the Executive Council in behalf of Mr. R. in that case, he will hand in the petition

which he holds, to the clerk of the Council and beg of the clerk to immediately lay the petition before the Council, and when the Council shall have granted the prayer of the petition, Mr. Rudsdell will please to take the order from the Council Chamber to the Surveyor General's Office, then request the Surveyor General to lay the diagram of the township of Nepcan before him, and examine the broken fronts adjoining Lots No. 38, 39, & 40 bounded by the waters of the Grand River at or near the Chaudiere Falls, and mark the letter R on the said three broken fronts, then lay the order of Council on the said three broken fronts, producing his power of Attorney to the Executive Council as well as to the Surveyor General, as being legally authorised to act for and in behalf of Mr. R.—Should the Surveyor General object to his laying the order on the said Broken Fronts, Mr. Rudsdell will enquire how long it has been since they were granted and in whose name,-should he be answered in the name of Ephraim Jones, the Clergy of Upper Canada and Mrs. Jessup, Mr. Rudsdell in that case will please to call at the office of the Secretary of the Province, and there examine the lines of the Grants made of Lots No. 38 and 40, and see whether the Government has granted the said broken fronts with the lots No. 38 and 40, but should the said broken fronts be applied for by any other person, Mr. Rudsdell will please to know the date of the application, and if the application has been since the date of Mr. Randall's letter to Mr. Boulton, Mr. Rudsdell will then ascertain why Mr. Boulten has let my petition lay over to be superseded by an other claim, and should be discover that Mr. Boulton may have acted with interested views, he will then remonstrate to the Governor and show my instructions and petitions committed to the cure of Mr. Boulton.-Mr. Rudsdell will explain to the Governor the suspense I have been kept in and my object for wishing my claim to cover the said broken front and that my views are to erect Water Works, such as Grist and Saw Mills and a Forge for making Iron; that I have purchased from the Government of Lower Canada, lands opposite to the said broken fronts the distance off our miles containing an extensive body of the best and richest Iron Ore; and as the said broken fronts are bounded by the waters at or near the Chaudiere Falls, which admits of a situation for erecting such works and that the lands lying between said Grand River to the River St. Lawrence admits of settlement, which is not the case a distance of five miles in rear said River on the North side Province of Lower Canada, for which reason Mr. R., is desirous of erecting his works on the Upper Canada side, at the Chaudiere Falls, which will be convenient in his getting his Ore to his works. Should those fronts not be granted and the Surveyor General admits of my claim, covering the broken fronts adjoining lots No. 38 and 40, but objects to the claim covering the broken front adjoining lot No. 39 as being reserved for the benefit of the Clergy, Mr. Rudsdell will please to apply to the Governor and solicit the Governor to permit Mr. R.'s claim to cover the said broken front adjoining lot No. 39, together with the grant of the small rocky clumps or islands laying in front of said lots with a line beginning from the North West corner line of lot No. 39, and running to the channel of said River and from thence down the River with the said Channel 10 chains below the N. E. corner line of lot

No. 40, including said bank, and water, together with the said rocky clumps or islands lying within the said line; the timber growing on said broken fronts is mostly small cedar and spruce pine commonly called a cedar thicket and the soil scarcely to be cultivated, being extremely rocky:—the distance from the main to the rocky clumps or islands is about 60 feet and except in the time of high water the passage is almost dry, the islands having the same growth of timber as the broken fronts and the soil the same and that the said rocky clumps or islands cannot contain more than twenty acres.

—By extending a dam from the main to one of the nearest rocky clumps and throwing a wing out into the main river will command a sufficiency of water for water works and except for building works of the aforesaid description a grant of said broken fronts and islands would not be worth possessing but by creeting such works it will bring on the settlement of the lands in that part of the province which is totally uninhabited which no doubt government will be disposed to encourage and as government has granted to Messrs Shuter & Mears an island large enough to admit of a snug farm and the soil of the best quality laying at five times the distance from the main and having a considerable depth of water between the main and the island the dryest season of the year, Mr. R. therefore flatters himself government will be equally disposed to give him as much accommodation; and as the broken front of lot No. 39 lays so near the place where Mr. R. wishes to build, he prays that government may encourage him by taking off the reserve so that he may have the fee simple of the land. When Mr. Rudsdell marks the simple of the land. letter R. upon the said broken fronts he will likewise mark the same letter on the rocky clumps or islands and claim the same as broken fronts as the passage between the main and said islands is dry a considerable part of the year, but should Mr. Rudsdell find it out of his power to procure the broken fronts adjoining lots No. 38 & 40 he will in that case endeavor to get a grant of the broken front of lot No. 39 including the said islands and water courses within a line beginning at the N. W. corner of lot No. 39 running with the channel of the river 10 chains below the N. E. corner of lot No. 40, but should government not allow my claim to cover the broken front adjoining lot No. 39 endeavor to get a grant of the islands and water courses as described and take out a lease for the reserve lot No. 39 and lay the remainder of my claim on the broken fronts of lots No. 20 & 21, laying on the river about 4 miles above the Chaudiere falls in the said township of Nepean.-And should Mr. Rudsdell succeed in getting a grant of the said islands and broken fronts of No. 38, 39 & 40, and should there not be a sufficiency of land to fill up my claim of 200 Acres he will please to lay it upon as much of the broken fronts of lots No. 20 &21, bounded by the waters of the river as the deficiency may cover, covering also a small island opposite the N. W. corner line of lot No. 21, should government persist in not giving a grant of those four rocky clumps or islands in that case Mr. Rudsdell will take out a lease for the same, for as long a time as he can.

Cornwall, July 23rd. 1808.

No. 24.

To His Excellency Francis Gore, Esq., Lieutenant Governor of Upper Canada, &c. &c. &c. in Council.

Having been applied to by Jonathan Rudsdell, late attorney for Robert Randal, for our opinion whether the erecting a mill dam on the south side of the Grand or Ottawa river, Province of Upper Canada, in the Township of Nepean, and near the Falls of the Chaudiere, will, in any wise interfere or obstruct the passage of canoes or boats navigating the said river; the said dam to run from the main shore to an island in the river, a distance of about sixty feet.

We do hereby declare, for the information of His Excellency the Governor and Council of Upper Canada, that the said Mill Dam will not, in any manner, interfere with, or obstruct the navigation of canoes or boats in the said Grand or Ottawa River, the usual route for boats and canoes being on the north side.

Given under our hands, in the city of Montreal, this fifth day of October, in the year one thou sand eight hundred and eight.

W. McGILLIVRAY.

Agent, N. W. Co.

No. 25. York, 30th January, 1809.

Dear Sir: I acknowledge the receipt of your several letters, and am much mortified that you should think yourself neglected. Your affair has been repeatedly before the Council, so anxious have I been on your account, that I have personally attended the Governor, also the Chief Justice, out of Council, and exerted my personal interest in your favour. Though you are ordered personally to attend, I still hope to get through without; I am promised another hearing next Council. As to writing, I have once or twice written to you myself;; and John Robinson, whom you know to be with me, has also written to the care of Mr. Cozens—this will go: under that address by a gentleman I can depend upon. You may rely on my exertions, and I think you will ultimately succeed. The certificates, &c., are very satisfactory. I was at the Council office yesterday. My son Henry also wrote to you on the reserve. The Council wanted an affidavit of the species of timber on the lot—the reason of which is evident—"that where, on the banks of our waters, we have either oak or pine, they reserve them for the navy, &c.

Yours most faithfully,

D'ARCY BOULTON:

ROBERT RANDAU, Esq., Ottawa River.

I shall have to advance the forty dollars before location, shall consequently draw on you the moment I have certainty of success.

Спіррама, Мау 17th, 1819.

HENRY J. BOULTON, Esquire,

SIR;

Time, Mr. Boulton, will disclose all things. If your knowledge of the Cabinet secrets of

my business is such, as to cause you to have recourse to the measure you wish me to adopt in your letter that has been just now handed to me, by young Mr. Smith—I cannot perceive that your security need be better,—or that mine will be made much worse; by not adopting the measure.

Probably Mr. Boulton, I might be more alarmed at the situation of my business, had I the secret knowledge of its true situation that you may have. But if my want of that knowledge, leaves me not alarmed, my ignorance must be my comforter, until time unveils to me, the result of my business. You will greatly oblige me, by sending to me, as early as you can, a copy of the Note which Clark sues on, as well a copy of the writings that you got from Montreal, relating to the business.

Iam

Sir,

With respect,

Your humble servant,

R. RANDAL.

Henry John Boulton, Esq.,

Attorney-at-Law,
York, Upper Canada.

No. 27.

(Copy.)

CHIPPAWA, June 29th, 1819.

My motive in writing this letter to you, is not intended to palliate the high tone of your son Henry's procedure against ma; for fees, including the sum of Fifty pounds allowed for your management in the early state of my cause with Phelps, to amount of £125 currency, and the interest which he adds making the sum of £141 16s. 3d., currency—but purely for the respect I feel for you.

Your son Henry, is not satisfied with the Bond and Mortgage given him, dated 17th March, 1817, (for your and his fees in my suit against Phelps) for £100 currency, on a lot of land in the township of Nopean, District of Johnstown.—He is not satisfied with my Note of hand given him for Twenty five ounds currency, at Niagara; on the 7th October; 1818, for his fee, which he insisted I should do, previous to his calling my cause against Phelps for trial at the then Assize, which cause, you as presiding Judge would not hear, from motives of delicacy; and ordered the cause to lay over as a Remanet of the Court for a future trial ;-but he writes to me; a letter which I received on the 17th May last, wherein he says, "I have sent to my Clerk Mr. William Smith, a Cognovit for the amount of £141 16s 3d; currency, to be enabled if so inclined to take out and execution against you" I refusing so to do.

He again writes to me, handed by Mr. Jarvis, 23rd instant, wherein he says, I am very impertinent, (I suppose for not having signed the Cognovit;) he also says the security I gave him is not worth half-a-dollar per acre, as there are no inhabitants in the Township.—And Mr. Jarvis handed me a summons from Mr. Henry John Boulton, to appear on

the first day of Trinity Term next, at York. Whether the land is worth half-a-dollar per acre or twenty dollars, it is not my motive at this present to make any comments. If the extreme scarcity of money does not preclude the interposition of my friends; I hope the land will not fall into his hands. through your instance that Mr. Henry Boulton became employed by me to manage my suit against Phelps. At the time he accepted the management of the cause, he was knowing that I was moneyless, and promised to wait for his fees until the termination of the cause: however, a few months after he made up an account of £50 currency against me, and required security for the same, upwards of six months too previous to his arguing the cause. I offered him security on land in Matilda, a township thickly settled, his choice was Nepean; he knew the land in both townships to be good. When you advised me to employ your son, I expected his assistance in recovering my property from the hands of a set of scoundrels; little did I expect that he would require of me a judgment bond for fees previous to the decision of the cause, or that I was to be ruined by the man employed to assist me. The steps of your son are so novel in the law practice of this Province, I consider it my duty, from the friendly understanding that has subsisted between you and me, to lay the business before you-not, sir, that I wish you to palliate the high tone and tenor of your son's speculative intentions. I may or shall endeavour to meet his wrath at every point, and neither of us may be the winner.

I am,
Sir,
With respect,
Your humble servant,
R. RANDAL.

Hon. Justice Boulton, York, Upper Canada.

No. 28.

Sir,

I have been put in peaceable possession of the place at the foot of the Chaudiere Falls, which belongs to you, Sir, by John Torry, late agent for you at this place; and he having absconded from this place to the United States, and I having some property in my care which belongs to you, as I am informed, I desire that you would inform me by letter or otherwise how I am to dispose of it for your benefit. Providing I remain on your place, I will take the best possible care of such things belonging to you which are intrusted to my care; but if I should see cause to leave your place, I wish to know of you how I am to dispose of things in my hands, delivered to me as your property. I will likewise inform you that the greater part of your property here was deposited by Mr. Torry, in the care of Samuel Benedict, senior. Now if you desire me to take charge of those things, I desire you to inform me and give me such credentials as will enable me to secure the same for you,

I am,
Sir,
Your most obedient and
Very humble ser't,
ROGER MOOR.

Nepean, 12th March, 1813.

No. 39.

To His Excellency Francis Gore, Esq., Lieutenant Governor of Upper Canada,

gr. gr. gr.

THE PETITION OF ROBERT RANDAL,

Humbly Sheweth:

That in the month of February, eighteen hundred and nine, Your Excellency in Council issued your warrant for one thousand acres of land in favour of your Petitioner, the patent and survey fees being duly paid to the acting Receiver General, on the 23d day of February, 1809. That your Petitioner only received a patent for 950 acres, reserving 50 acres of the warrant for a future location, which your Petitioner intended might cover some rocky chasms, which properly belong to the broken front of lot No. 40, in the first concession, on the Grand River, in the Township of Nepean, District of Johnstown, which said lot bears a portion of your Petitioner's location, out of the nine hundred and fifty acres. That your Petitioner was directed to obtain a certificate from some sworn Surveyor, or neighbours near the Chaudiere Falls, that he and they could walk, in the dry season, from lot No. 40 to the rocky chasms and not wet their feet; in which case the said rocky chasms would be considered part of the broken front of said lot, and the fifty acres unlocated were to cover the rocky chasms and the intermediate space therein contained. But at the return of your Petitioner from this place in March, 1809, to Montreal, he fell a victim to the sharpest persecution, and was unrighteously imprisoned for debt, and in close confinement till the 13th of last month, which not only prevented your Petitioner from obtaining a certifi-cate relative to the rocky chasms, which he could have done with much ease but also from prosecuting his establishment at the Chaudiere Falls, in the Grand River, which as well as the property which your Petitioner had sent on to the amount of five hundred pounds, as a commencement in his business, entirely perished as soon as the late War was declared by the American Government against Great Britain.

Your Petitioner would have proceeded to his place at the Chaudiere Falls for the purpose to obtain the relative certificate after obtaining his enlargement, but his debilitated state, and the fast approach of winter, made it requisite for your Petitioner to proceed to this place, from thence to Niagara, in order to look after his property in that part of the Province; and your Petitioner now conceives that he has the tacit approbation of those who were his adversaries, to proceed in making his establishment at the Chaudiere Falls, on the Grand River, by their granting him his enlargement, and offering him their friendly assistance. He also flatters himself that his long and sharp sufferings are considered by those whom he viewed as enemies, to be an ample atonement for their unenvied and friendly return of feelings. And as Your Excellency may be well informed of the great utility your Petitioner's establishment of the Bridge Water Works, near the Falls of Niagara, were to the prosperity and growth of that part of the Province, he hesitates not to say his establishment at the Chaudiere Falls, on the Grand River, will be of equal, if not of superior importance to

that section of the Province. Your Petitioner can with truth say, that his Bridge Water establishment at Niagara, gave a spring to the agricultural and mercantile interest, not only throughout the District of Niagara but the Province at large; for your Petitioner was the first person who manufactured Flour for exportation in the Province of Upper Canada. Previous to your Petitioner's establishment at Niagara, both farmers and merchants were so circumscribed, as to be of little service to each other .-His mercantile establishment at Cornwall, in the Eastern District of this Province, is also known to have been a growing benefit to that place; and had envy not overtaken your Petitioner, he would have turned the trade and produce of the whole Eastern District to Cornwall, whereas it formerly, entirely went to Montreal. The chasms which Your Petitioner considers to be part of the broken front of lot number forty; are not nor cannot be of the least importance either to government or individuals except to accommodate your petitioner in establishing himself in business at the Chaudiere Falls. A young gentleman who is at this place unexpectedly, at this moment, says,-he has himself stepped from lot number forty, to the chasms in the dry season of the year, and did not wet his feet, that he thinks the chasms should be considered as part of the broken front of lot number forty, and is willing to declare the same before Your Excellency; he is a young man of veracity and his declaration is to be relied on, which your petitioner trust will be proof sufficient to satisfy Your Excellency of the propriety of his present request, and if it should be proof sufficient, your petitioner most humbly solicits Your Excellency to order a deed to be issued in the name of your petitioner as follows:

Beginning at a cedar tree or boundary mark near the edge of the bank at the side of the Grand River in the line between lots thirty-nine and forty, and to run to the upper extremity of the fourth chasm, according to the annexed draft of it, from thence to the extreme point or upper end of chasm number three at the Grand Fall, running with the margin of said chasm at the waters edge to the North side; thence down the stream to the lower end or extreme point of said chasm, thence to the extreme point or lower end of chasm number two, from thence in a straight line to a small oak tree or boundary mark, in the North end of the East side line of lot number forty, at the waters edge of the Grand River, thence with the waters edge following the several turnings and windings thereof to the place of beginning, with all the intermediate space therein contained, containing fifty acres more or less.

And in duty bound, your petitioner will ever pray,

R. RANDAL.

York, Upper Canada, Nov. 2nd, 1815.

No. 30.

DEAR SIR:

Locate 50 Acres, to complete your grant of 1000, is 5th September 1818.

PERTH. 14th December, 1816.

SIR

Yours of the 25th November came to hand yesterday,—I shall with pleasure attend to Mr. Randal's concern in the month of January, at which time I shall visit the lot in question and ascertain the exact situation and enclose you a sketch and certificate and charge the same in account against you.

I have the honor, to be Sir, Your most oh't ser

Your most ob't serv't R. SHERWOOD, Deputy Surveyor.

G. S. Boulton, York.

No. 32.

Long-ash Estate, Nepean, April 27th, 1818.

SIR:

Having lately arrived from England and settled on the Grand River in the township of Nepean, and being informed that the lot adjoining to mine which is No. 40 belongs to you I have taken the liberty of troubling you to know if you are disposed to part with it and on what terms, waiting an answer.

I remain

Sir, Your very ob't serv't., J. BARROWS.

Major Randal, Little York or elsewhere, Canada.

No.33.

#### UPPER CANADA.

Township of Longuille, 7th February, 1819.

Mr. Randal, Sir

I did myself the pleasure of writing to you last fall about your situation on the Grand Chaudiere Falls to which I have not had the the pleasure of an answer, when I had the pleasure of seeing you, you spoke as if you intended to make speedy preparations to form a settlement & commence business & expected you would have commenced previous to this, hope your lawsuit you had depending has terminated in your favor, should be glad to learn if you have been successful—as I apprehend your strendance to that has prevented the visit you intended to make last fall—I would be under obligation to you to inform me as quick as possible if you would dispose of any part of your land above mentioned. If you are inclined I would beg leave to offer to purchase a small proportion, say an acre or two, immediately on the Point, leaving you the exclusive privilege of water. If you feel disposed would thank you to inform me with your conditions, hoping, we may come to an understanding, I am in business now where I have directed my letter from but the situation does not suit me so well for business as one above.

I have taken a large concern at the foot of the Long Sault Rapids in the Grand river which will be a place of considerable trade, & should like a situation on the Chaudiere in order to establish a communication with the Upper Country, if it is your intention to comply please write me speedily that I may not lose any time to erect a Store for the purpose of carrying on business next season, and would be glad you would give me the privilege so to do, if you have any commands relative to that place, you would wish to have executed, shall be happy to forward your designs by empowering me to act for you, should feel much obliged by your speedy information pro. or con.—As I wrote before on the subject am fearful my letter miscarried as I expected an answer.

I am, Sir,

Your very humble serv't.
SAMUEL DOWNES.

No. 34.

NEPEAN, Sth May, 1819.

SIR.

I had the honor of addressing you last Autumn, but not knowing your address correctly I am doubtful of your having received it. The purport of that letter, as well as the present, was to know if you would dispose of a part of your lot of land on the Falls of the Chaudiere, as I should be glad to have one or two acres either by sale or lease. I have not the honor of being known to you personally; but having served in the late war in various parts of Canada, and particularly in the part of the country where you at present reside; and although my military occupation prevented my having much communication with the gentlemen of your neighborhood, I believe you will obtain information of me from Mr. Samuel Street, though but little acquainted with that gentleman. I was at that time Deputy Assistant Quarter-master General, and at present have retired on Captain's half-pay, of the 60th Regiment, and having drawn some lands in this country-have taken up my residence at the rapids des Chenes, five miles from your lot; and as the whole of that distance is land carriage, I find a great inconvenience for want of a place to store my goods at the landing, and am now obliged to build a small store of round logs on your property, which, if not agreeable to you, I will immediately remove, but if you will either sell or lease one or two acres at the lower point, next to the Island, in the Bay, I shall be glad to know your terms by the earliest opportunity.

There is a person here by the name of Burrows, who pretends to be agent for that property, alias Heney, but as I could not believe that he was entrasted with any property I have not applied to him If you have no agent here, and that I can be in any way serviceable in that line, though not with the view of pecuniary motives, but merely for the advancement and settling of the country, I beg you will command me, I shall at all times feel happy to communicate with you on the subject. Should your business at any time lead you to York, please mention my name to Judge Campbell, with whom I

have had the honour of being acquainted for some years past.

I have the honor to be Sir, Your most obedient, Humble servant,

JNO. LE BRETON.

ROBERT RANDAL, Esq. Chippawa.

No. 35.

Point Nepean, 8th January, 1820.

Honored Sir:

Having wrote you on the 27th of October last, and not receiving an answer I again take the liberty of troubling you on the same head.

Having been here ever since July last, and had every opportunity of seeing the necessity of a house of accommodation, I took the liberty of erecting one (as a tavern) near the old house built by Mr. Torry.

It being the opinion of every one here, that nothing can be done on the Point in regard of cultivation, I mean with your full approbation to make a trial by laying out a garden, having been gardiner seven years in this country during my service here, in the Royal Artillery, being employed chiefly by Generals Brock and Glasgow.

From what I have heard from several persons who have the honor of being acquainted with your character, I have every reason to hope for a favorable answer, or should not have gone thus far without hearing from you. I hope therefore, Sir, you will not think it too much trouble to send me an answer the first opportunity.

As to my character, I can no doubt fully satisfy you on that point, in compliance with the above you will much oblige,

Sir.

Your humble Servant, ANDREW BERRIE.

No. 36.

In the King's Bench,
District of Niagara, to wit.
HENRY JOHN BOULTON,

TRINITY TERM 2nd, GEO. IV. Robert Randal, of the Township of Stamford,

ROBERT RANDAL. ) in the District of Niegara, Esquire, the above named Defendant, maketh oath and saith that during the Session of the Legislature in February last past, this deponent in a conversation with Mr. Morris of the County of Carleton, was informed that his land in the township of Nepean, in the Johnstown District, was sold by the Sheriff of the said District, under and by virtue of a Writ of fieri facias in the above suit and this deponent further saith that not until then did he know that the said Henry John Boulton had obtained a Judgment

against him and this deponent further saith that pecuniary embarrassments prevented this deponent from applying before to set aside the said proceedings, which the deponent could never expect to have been carried to such lengths from promises held out by the said plaintiff, namely, that the bond was only taken, upon which part of this action is brought, as a security for his, the said Henry John Boulton's, fees and his Father, now the Honorable Justice Boulton.

Sworn before me this 10th day of July, 1821.

No. 37.

York, December 31st, 1823.

(Copy,)

An application has been made to me, by Mr. Jonas Jones Barrister at law, to furnish him with instructions to defend an action of ejectment brought by Mr. L. Sherwood and Captain Le Breton for the purpose of getting possession of lands and tenements which belong to me, and which are at present in the actual possession of Messrs Berrie and Firth. &c.

As Colonel Burke the Gentleman who employs Mr. Jones could not have been fully aware of the whole of the circumstances at the time he employed him. I beg leave to state to you, sir, for His Excellency the Commander of the Forces, information, that Mr. Jones is not only brother-in-law to Mr. Sherwood, but also brother-in-law to Mr. Boulton the person who upon an ex-parte proceeding obtained judgment against me, issued execution, and sold this proporty for the sum of one hundred and twenty five Pounds, for fees accruing to him in his prosecuting a suit for me in the sum of ten thousand pounds currency wherein I had obtained two verdicts for the aforesaid sum, which Mr. Boulton abandoned, and my suit thrown out of court. His Excellency the Commander in Chief is in the possession of the case in detail.

I also beg leave to communicate for the information of His Excellency, that I have employed Mr. John Rolph Barrister at law to commence a process against Mr. Boulton in order to set aside the judgment obtained against me and for which this property has been sold at Sheriff's sale, and as he is in possession of the whole proceedings and documents on the case, and being of the first respectability and not long since from the Temple in London, and no way connected with the above gentleman, I humbly beg leave to suggest the propriety of associating Mr. Rolph with Mr. Jones in defending Messrs Berrie and Firth against the suits of ejectments, not that I have any reason to suppose that Mr. Jones would in any wise be influenced by his connection with Messrs Sherwood & Boulton, only that human nature is generally more or less influenced by family connexion, which induces me to begleave to recommend to his

Excellency that Mr. Rolph he associated with Mr. Jones in the defence of the said suits of ejectments, & if His Excellency should think proper so to do, that he will please to order that Mr. Rolph have the earliest notice thereof, directed to him at Dundas in the District of Gore, Upper Canada.

I have the honor to be,

Sir,
Your most ob't and
very humble serv't,
ROBERT RANDAL.

Lieutenant Colonel Dickson, Deputy Qr. Master General, Quebec.

No. 38.

DEP'Y Q'R M'R GENL'S OFFICE, Quebec, 24th January, 1824.

Str.,

I have the honor to acknowledge the receipt of your letter of the 31st ultimo, which having submitted to the Commander of the Forces, I have received his Lordship's commands to thank you for the suggestion therein contained, but at the same time to acquaint you, that his Lordship does not deem it

necessary to employ farther counsel in the matter in question.

I have the honor to be
Sir,
Your very obedient
Humble servant,
WILL. R. DIO

WILL. R. DICKSON., Capt. & Dep'y Q'r M'r Gen.

R. RANDAL, Esq. M. P. P. York.

No. 39. York, 23rd June, 1834.

DEAR SIR :

I hasten to inform you that yesterday morning, as soon as decency would permit, I addressed a note to Major Hillier on the subject of the Writ of Error, stating Mr. Cameron's refusal to scalit. In the evening, I had the honor of receiving a note from the Major, a copy of which I enclose for your perusal. You will see, therefore, that thus far we go swimmingly, however we may succeed hereaftar. I have been favoured with a letter from Mr. Rolph stating, that it will be impossible for him Mr. Rolph stating, that it will be impossible for him Lam sorry for it as I wanted his assistance much; but however, as I am fairly in for it, I must of course pursue it. What ever lies within the compass of my small abilities, (and very small they are I know) you may rest assured shall be done for you. But as there is no one thing under heaven, more uncertain than the certainty of the law, I would not have you too sanguine. You know whom you have to contend with. Term begins on Monday, 5th July.

cally to be particulations bearing S. WASHBURN:

H

Copy.

"Major Hillier has the honour to acquaint "Mr. Washburn that the necessary instructions "have been given to the Provincial Secretary to affix the Great Seal to the Writ of Error required by him."

"GOVERNMENT HOUSE, York, 22d June, 1824."

No. 40.

BROCKVILLE, 6th April, 1827.

Sir,

At the desire of Mr. Charles Lemoine
I have enclosed you the within, should you incline
to sell, please write me your terms.

I am,

Sir,

Your obedient servant, ADIEL SHERWOOD.

ROBERT RANDAL, Esq.

For Mr. Charles Lemoine, of Augusta, Blacksmith.

To write to Robert Randal, Esquire, M. P. P. Chippawa, above Niagara, stating that he Lemoine wants to purchase Lot No. 11 on the Rideau, 1st Concession of Nepean—also state that R. Sherwood bid the same off at auction some years since, but the sheriff refuses to give a tutle, and therefore this Lot must be considered as Mr. Randal's property as yet.

R. SHERWOOD.

24th March, 1827.

A. Sherwood as agent may send this if he choses R. S.

### No. 41.

The Bill of the Session of 1830, was similar in its provisions to that of 1828, only that it appointed the Speaker of the House of Assembly of Lower Canada the Chancellor to try the case, instead of Mr. Justice Willis who had gone to England.

On the question for passing it in the House, the Yeas and Nays were taken as follows:

YEAS—Messrs. Baby, Doctor Baldwin, Black-lock, Brouse, Buell, Cawthra, Dalton, Dickson, Fraser, Hamilton, Henderson, Hopkins, Horner, Ketchum, Lefferty, Longly, Lyons, McCall, Mackenzie, Malcolm, Morris, Perry, Radenhurst John Rolph, Shaver, Smith, Terry, Thompson, Wilkinson, James Wilson and Woodruff—31.

NAVS-Messrs. Bethune and John Wilson-2.

So:the Bill was signed and sent up to the Legislative Council, who refused to concur in and declined to amend its provisions. No. 42.

BYTOWN, 21st July, 1835.

SIR,

I have been here about three days looking after the Chaudiere property, and examining maps, &c. I find Captain Le Breton owns lot No. 40, covering the Falls. It is, or rather will be, Bytown itself, and is very valuable. A gentleman tells me that he will give £1000 for the sole privilege of making a slide down the falls to run timber over, and the lot will be a town plot.

No.38 belonged to Judge Sherwood and he sold it to one Peter Aylwin for £350 cash and it is worth double that.

No. 39 Clergy Reserve Government holds as I am told, it meets the Union Bridge at the Ottawa, there are good buildings on it, occupied as I believe by one Firth.

Yours &c.,

C. WATERS.

LONGUEIL, July 28th, 1835.

I have been at Richmond in the County of Carleton and at Perth in the County of Lanark and have examined the office of Registry at Richmond in go-ing and returning; at Perth I examined the Treasurer's office and also the Registry of that county I find that from the Sheriff's deeds of sale of Major Randals lands in Nepean, John Le Breton purchased lot No. 40. first concession on the Ottawa and the broken front of said lot &c. that Levius P. Sherwood a Judge in the K. B. purchased broken lots No. 10 & II, 1st concession, and lot No. 10, 2nd concession on the River Rideau, and that afterwards to John Le Breton by deed and release made L. P. Sherwood Esqr. a joint proprietor of the lot No. 40, 1st concession and broken front of said lot on the Ottawa, that is to say, one undivided half of said lot and broken front thereof, and that L. P. Sherwood, Esqr. by deed, conveyed to John Le Breton the one undivided half of lots Nos. 10 & 11, 1st concession, No. 10 2nd concession on the River Rideau, and that exchange deed or deeds of separation and division were passed and exchanged between them, and thereby L. P., Sherwood owns east half of lot No. 40, in the first concession and broken front of said lot on the Otawa together with an equal privilege of four islands in front thereof, and that John Le Breton owns the west half of said lot and broken front thereof, islands &c. these conveyances appear to be of the nature of lease and release from one to the other, firstly, to: make them co-partners and then a division of lot like. 40, in first concession and broken front of said lot &c. on the Ottawa, which plainly shews what had always understood, that they purchased those lands in partnership, at Sheriff's sale; the loc No. 40, &c. on the Otawa is in reality, and there might easily be made of it in my opinion £10,090 .... It covers water privileges worth half that sum. The Union Bridge across the Ottawa abutting on the lot. For sales out of the broken front of said lotyou will notice the annexed memorandum, there are two parcels or privileges, one of which (an sere) was conveyed by L. P. Sherwood Esq. and Charlotte his wife, to His Majesty King George 4th on which stands a block of buildings at the end of the Bridge built by government but now unocupied. These are the buildings I formerly mentioned that were supposed to be on the other lot, this lot and privileges are certainly the most valuable property in all this part of U. Canada.

Lot No. 10 in 2nd concession River Rideau comprises a valuable Mill site on the River Jacques emptying into the Rideau broken lots 10 & 11 cover the mouth of that River, and front on the Rideau River. These lots, together with No. 11 in 2nd concession are in my opinion worth 40s. to 50s. per acre; the lands are good and privileges great, lot No. 40, 1st concession &c. on the Ottawa might and in fact, will and must be a continuation of Bytown which will in a few years be the most important town in Upper Canada.

There is no one on the lands on the Rideau. There are squatters on No. 40, on the Ottawa but I cannot find out that there are any on No. 39 or 38, (Ottawa.)

N. B. The 2nd parcel of land sold out of the broken front of lot No. 40, on the Ottawa is as follows—

Firstly from John Le Breton out of the east half a water and land privilege &c. to Samuel Stacey & George Lyman Bellows, both Foreigners. Samuel Stacey then sold out his right to the said George L. Bellows, then George L. Bellows sold to Henry Stacy, then Henry Stacy sold out to Henry Church, Henry Church then sold out to Mathew Cormel of Bytown, since dead, this is as far as I can trace any sales or titles in the Bathurst district, it has been a most extraordinary as well as an intricate transaction. The conveyances appear to be quit claims, which shews a doubt of the title. L. P. Sherwood & wife sold the acre to the King in 1829, February 24th.

Mr. Henry Sherwood professed to sell lot No. 30, 1st Concession, Ottawa and received a sum of monney and gave a receipt but gave no deed. Afterwards the Honorable L. P. Sherwood sold the same lot as I am informed to Peter Aylwin for \$1,400 but I can find no record or deed. In this sale there is a mystery; this lot will soon be worth £10,000 if not now. Yours &c.

## STATEMENT OF GRAND JURY,

HOME DISTRICT, WITH CHARGE OF JUDGE.

F. B. HEAD.

The Lieutenant Governor transmits to the House of Assembly, in compliance with the request of the Grand Jury of the Home District at the present Assizes, the accompanying statement of that body, with a copy of the charge of the presiding Judge at the opening of the Court.

GOVERNMENT HOUSE,

12th April, 1836.

GRAND JURY ROOM.

Toronto, 5th April, 1836.

Copy.

The Grand Jury having visited the District Gaolbeg to report,—That the cells, not being built of stone, and the gaol, not being enclosed within a sufficient wall, thirty-one prisoners have effected their escape from the 1st July, 1832, to the 1st April, 1836. That the want of room prevents the proper classification of the prisoners—that for the same reason no attempts are made to employ them—that there is no secure place of exercise for the inmates of the prison—that the gaol is unprovided with a well of fresh water, or with privies, and that the allowance of bedding is insufficient during the winter months.

The Grand Jury feel convinced that the insecurity of the prison, the want of classification and employment of the prisoners, the deficiencies of arrangement requisite for insuring a proper cleanliness in the prison, and of wholesome exercise for its inmates, are evils which call for the immediate interference of the Legislature, in order that the proper remedies for their removal may be applied; and they beg therefore that this report, together with so much of your Lordships charge as relates to prison discipline, may be laid before His Excellency the Lieutenant Governor with a recommendation that this subject may be submitted to the consideration of both branches of the Legislature with the least possible delay.

(Signed) J. S. Macaulay, FOREMAN.

Gentlemen of the Grand Jury:

I had an opportunity last year of addressing a Grand Jury of this District, and I then took the liberty of calling their attention to the consideration of the state of the district gaol, and of suggesting the propriety of applying to the Provincial Parliament on the important subject of enquiring into the general state of all the gaols in the Province. I think it my duty to recur to the same topic at this

time, as the Legislature is now in session, and as the representation of a respectable Grand Jury would probably have as much weight as any other public body whatever. It is also a subject to which frequent allusion must be made before a spirit of enquiry and reform can be thoroughly excited in those who have the power of effecting the improvements which the good of society demands. Every member of the community is, more or less, interested in this matter, but few are willing to incur the trouble of examination. Many think their time better occupied with other business-many are not sensible of the existing necessity of Legislative interference, and some few perhaps possess so small a share of human kindness, as to think that both the accused and convicted prisoner cease to be objects of attention. Men of the last description should recollect, however, that public policy is on the side of reform in this case, for nothing is more pernicious to the general cause of morality than the practice of discharging the inmates of public prisons worse members of the community than when they entered their walls, and such a result is particularly to be deprecated in the case of prisoners who are acquitted by a verdict of their country.— The amelioration of public prisons and of prison discipline, is a subject worthy of enquiry in every enlightened community. The British Parliament has frequently considered it with grave attention, and I trust our own Legislature will shortly follow the noble example. If a competent number of commissioners were appointed under an act to be made for that purpose, to inspect all the gaols of the Province during the recess of Parliament, to report their actual state, and to suggest such additions and improvements in the buildings, as well as in their internal economy, as the public weal requires, it would afford the Legislature all the information requisite to enable them to proceed in the necessary work of reform. In the erection of gaols I think two objects should be kept steadily in view, viz: security and proper discipline.

Prisoners cannot be safely kept unless the prison is in all respects secure; and they cannot be well governed unless it be both spacious and convenient. Much attention has of late years been paid in England to the internal arrangement and economy of prisons in consequence of the unremitting exertion of that benevolent institution, "The Society for the improvement of Prison Discipline," and which, from the zeal, intelligence and perseverance of its members, will eventually prove beneficial to the whole civilized world. The work was begun by the celebrated Howard, but investigation into the state of public prisons much more extensive than his has been carried on in England with great success since his time, and is still continued with unabated assiduity by many benevolent and distinguished christian moralists. The statutes 4 and 5 Geo. 4, chap. 64 and 12, originated in their exertions. These Acts

contain general provisions for the government of gaols throughout England, but before their enactment the Magistrates in general Quarter Sessions assembled for the different counties, made rules and regulations to be observed in county prisons, but they differed in substance and spirit, according to the lo cal feelings and opinions of the makers. In some counties no sustenanance whatever was allowed to accused prisonrrs before trial; in some a miserable pittance was conceded, while in other counties an adequate allowance was bestowed. The statutes 4 and 5, Geo. 4, direct that all prisoners committed for trial, shall be allowed such food as may be sufficient for the support of health, without being compelled to perform any kind of work, as the condition of the allowance. This is clearly a reasonable regulation, and altogether in accordance with the mild spirit of our criminal code. What a bad system must that be which consigns an innocent man not only to imprisonment, but painful hunger! To prevent the possibility of such injustice and cruelty, the law charitably presumes the innocence of the accused till his guilt be established by legal testimony. In the interim he is entitled to a reasonable and moderate sustenance, unless his behaviour be disorderly and riotous, and then indeed, from the necessity of the case, the allowance should be withheld till he give assurance of good behaviour; for every prisoner committed for trial is bound to submit to the established discipline of the prison, and not to interfere in the least degree with the peace and good order of the place. There must exist, from the very nature of the establishment, and without any specific law on the subject, an indisputable right of preserving order and decency in every gaol, and for this purpose to enforce the known rules and regulations on every individual within the prison, and to punish the breach of them. A right must also exist to restrain the intercourse of the prisoners with each other, for the same purpose. The necessity of such powers seam to be self-evident, but their extent, and the manner in which they are exercised, should be regulated by some general enactment applicable to all prisons in the Province. I have reason to believe that prisoners in some of our gaols do not receive the allowance which, in my opinion, they should Another abuse of the rights of prisoners was abolished in England by the same acts to which I have alluded. It had been the practice in most public prisons for the keepers at their discretion to load prisoners with fetters for improper behaviour, and especially for attempting or effecting their escape, and to continue the use of them for an unrea-sonable length of time, in consequence of which this power was sometimes greatly abused. These statutes declared that no prisoner shall be put in irons by his keeper, except in cases of urgent and absolute necessity, and then not longer than four days without an order in writing from a visiting Justice, specifying the cause. The frequent use of irons in every gaol, amounts in my opinion to a presumption of mismanagement in the Gaoler, or insecurity in the gaol; and I have not the least doubt that the salutary restrictions in the British Statutes make greater care and more skillful management absolutely requisite on the part of keepers of gaols, and at the same time have the desired effect of causing more secure prisons to be constructed. These are important public advantages arising from one

uniform system of proper discipline in public prisons.

Upon examination of the common law, it will be found that it has recognized, from the earliest time, three distinct classes of prisoners,—the debtor, the accused person, and, the convict; and it is evident the imprisonment of each class proceeds upon entirely different principles. The man suspected of crime is imprisoned solely to secure his appearance for trial, which is always a matter of necessity, for the law has recourse to it only in cases where no adequate substitute by way of security can be given owing to the atrocity of the suspected crime, and the presumption of guilt, or to the inability of the accused to procure bail. The convicted man is imprisoned for punishment, as an example to others, and to effect, if possible, his own reformation. The debtor in execution is imprisoned, partly in punishment of the fraud which he is presumed to have committed on his creditor, but principally to compel him to produce, or to render available for the discharge of his debts any property placed by him in such a situation as prevents its being reached by the ordinary process of execution, and which he withholds from his creditor, against natural justice. The objects which the law has in view as regards these three classes of prisoners are evidently various, and the consequent duties of gaolers arising upon them have proportionate varieties, yet in their prominent features there will be found an exact resemblance, for there are certain things proper and necessary in all public prisons. In the first place the prison should be well constructed and secure, for an insecure gaol is rather a public nuisance than a public advantage. In the second place, the gaol should be clean and healthy. Air, exercise, food, and clothing, such as are clearly necessary to sustain health, together with proper medicine and medical attendance for the sick, stand upon the same immutable principle, except in that short and awful interval which usually precedes execution, there can be no time or circumstances in which a prisoner accused or convicted of crime has not a right to all things indispensably requisite for the preservation of health and life. In the third place prisoners of eve-ry description have a right to be protected, as far as possible, from bad examples and bad society, to receive religious instruction, and to have proper opportunities of performing religious duties without interruption. Every large gaol almost constantly exhibits an extensive field for the steady exertion of zeal and talent in the Christian Ministry, and the Legislature in my opinion aught to provide for the stated attendance, at proper intervals, of some Minister of the Gospel at the Gaol of every District in the Pro-The expense requisite to insure the regular performance of this important duty, must appear trifling indeed when compared with the social advan-tages which would most probably result from the measure.

The employment of prisoners by voluntary or compulsory labor, according to the class to which they belong, for the useful purpose of diverting their minds from evil to good habits, is also an interesting subject, because such occupation must always form a part of every eligible system to be established by a general law. This is a topic, however, which requires a more extended treatise than the ordinary bounds of a charge at the Assize could embrace, and I shall therefore not attempt at this time either to examine its principles or to enumerate its salutary effects.

## MILITIA ADJUTANT GENERAL'S OFFICE, Toronto, 12th April, 1836.

The usual periodical returns required by this office, not affording the minute information required by the address of the House of Assembly dated the 28th ultimo on the subject of Militia fines, in as much as they do not comprehend either the names of the partties fined or the costs of suit attendant upon law process, I consequently applied to the several commandants of Militia Rgiments of the County of Col. FitzGibbon 1st East York, York, as stated in

G. Ridout, 2nd 1st West. Givins.

Washburn 2d do Thompson 3d

The Hon.J.H. Dunn, 1st N. | have the honor to

"S. P. Jaivis, 2nd acquaint you that from all, with the exception of Col. William Thompson, commanding the 3rd West York Regiment, I have learned in reply, that no fines or penalties have been exacted in their several Regiments during the period specified in the address.

Since I had the honor of receiving His Excellency the Lieutenant Governor's commands, communicated in your letter of the 30th ultimo-I have repeatedly applied to Col. Thompson for his report without success; it is possible the failure of an answer to my several letters may have been occasioned by his absence from home. I am however not altogether without information as to the fines of the Regiment under his command for the respective period.

As the general return (herewith sent) received from that officer furnishes but very imperfect information on the subject of fines, and the half yearly return (the appropriate return on that subject) had lings.

Addition of Principle Allahimonal holomorphy to the let discharge. He is the little school was not been received from him, he was applied to on the 23rd Nov. last for the deficient half yearly return; and altho' he did not comply with the instructions by sending the proper return, he transmitted to me with his reply (herewith sent) a list of persons 2nd Dec. 1835. stated to have been *fined for non attendance at the parade on the last 4th June .-This will so far satisfy the object of the address, but I regret that for the reasons I have stated I cannot furnish the whole of the information therein requi-I have the honor to be, Sir, _____

HARWOOD, TOWNSHIP, TORONTO, 2d December, 1835.

the margin, with

the view of ob-

taining the desired information, and

I have the honor to acknowledge the receipt of your letter of the 25th Nov'r. enclosing Blane's petition, and also your letter of the 23d with a copy of the general, order, 16th of May, 1829 requesting to know what number of the 109 returned absent from the parade, on the 4th of June last, have been proceeded against.

With respect to Blane's petition, I stated to him personally that I would remit his fine, although I thought with the Magistrates, that the excuse offered by him & his party was not sufficient to warrant their discharge from the fine and costs, as they had ample time and opportunity to have stated to me or their Captain, the cause of their absence, which they neglected to do. although they were perfectly aware, that if after the parade they had stated the cause of their absence, and that it was unavoidable, the excuse would have been admitted; but they thought proper to treat the notice of the Sergeant with indifference, if not with contempt, as may be discovered

[&]quot; The amount of fine as fixed by law for a private is ten shil-

by the words in their petition—" that they would attend if they got back in time"—which they must have expected to do, having left home (as they state) ten days before the training. Still, from Mr. Blain's general good conduct, and in the consideration of the heavy costs he has paid, I wish to remit his fine, and with His Excellency's approbation, the fine of several others similarly circumstanced, whose names are noticed in the list herewith inclosed.

With regard to the fines received, I believe I have always noticed them in my regimental return, and in my last stated that none had been received since the preceding one; in fact they have been hitherto little more than sufficient to defray the incidental expenses of the regiment. I shall, of course, give a statement of them in my half yearly return, which if made by the 24th of December, inst., will be in

accordance with the 7th clause of the general order referred to by you. I could not make out a correct return until the fines were received from the Magistrate, a part of which was only paid to me on the 24th November; the remainder has not yet come into my hands: see the list which, in compliance to your request, and to avoid censure I send, although I beg to observe, that I do not feel it any part of my duty to do so.

I have the honor to be, Your obedient servant,

W. THOMPSON, Col. Commanding 2d R. W. Y. M.

CERROY CORRORATION O	PB:CP			

Toronto, March 22nd 1836.

THOMAS BAINES.

Commissioner of Crown Lands' Office,

Toronto, March 26, 1836.

Sir:—I have the honour herewith to transmit to you copies of my accounts, current for the year ending 31st Dec., 1835, shewing the Receipts and Payments on account of Clergy Reserves sold, as required by the Address of the Commons House of Assembly.

There the honour to be Sir. I have the honour to be, Sir,

Your most obedient humble servant,

PETER ROBINSON.

## UPPER CANADA.

## DESPATCHES relating to Grants, &c. to Religious Denominations.

(Cory)

No. 79. Downing

Downing Street London,

15th September, 1830.

31R:-

I have the honor to acknowledge the receipt of your despatch No. 28, of the 10th M y last, enclosing a petition from the parishioners of Saint James' York, Upper Canada, in which they solicit the assistance of His Majesty's Government, to enable them to erect a new Church, in consideration of the accommodation which it is proposed to provide for the Military.

As I do not consider it expedient to adopt your suggestion that a Chapel should be built exclusively for the Military, I have recommended to the Lords Commissioners of His Majesty's Treasury that a donation of one thousand pounds should be made from any funds at His Majesty's disposal in the Province towards the expense of building the new Church at York on condition the accommodation should be permanently provided for His Majesty's troops; and I

received from Mr. Stewart, stating that their Lordships concur in my recommendation; and you are therefore at liberty to carry the same into effect whenever there shall be sufficient provincial funds at your disposal for that purpose.

I have, &c.

(Signed)

G. MURRAY.

Major General

J. JOSEPH.

(No. 97.)

(Cory)

DOWNING STREET, 25th October, 1832.

Sir:-I have the honor to acknowledge the receipt of your despatch of the 2nd July last, inclosing an address to His Majesty from the United Presbyterian Synod of Upper Canada, praying to be put on an equal footing with the Ministers of the Church of Scotland, and that they may be allowed to participate in the provision which has been made for that Church, from the funds at the disposal of the Crown in Upper Canada; and I am to desire that you will acquaint the petitioners that His Majesty has been pleased to receive the pention very graciously, and to refer it to my favorable consideration.

It is to be regretted that the Ministers in communion with the Church of Scotland, do not feel themselves authorised at present to sanction a union with the Upper Canada Synod; but if an arrangement satisfactory to both churches cannot be made, I am of opinion that it will be proper to afford some assistance to the petitioners.

With this view I am to request that you will transmit to me at the beginning of each year a statement of the mode in which you would propose that the money which it is intended to apply to religious purposes should be distributed, and in preparing such a scheme, you will of course bear in mind the principles on which you already have been directed to act, namely that you will endeavour to give assistance to the different religious denominations as much as possible, by building for them, in situations where they can command congregations, chapels and parsonage houses, as I am of opinion that money may be much more advantageously applied to these objects than in paying salaries.

I have &c.

GODERICH. (Signed)

MAJOR GENERAL, SIR JOHN COLBORNE, K. C. B. &c. &c. &c.

A true copy, J. JOSEPH.

No. 103.

the territorial revenue.

DOWNING STREET, 12th November, 1832.

Sir:-I have the honor to acknowledge the receipt of your despatch of the 5th September last, proposing an arrangement for the payment of the Church of England missionaries, in the Province of Upper Canada, and for affording aid to the Presbyterian, Wesleyan Methodists, and Roman Catholics to build churches and chapels, the salary of the clergy to be defrayed from the funds arising from the rents of the lease reserves and the interest on instalments of the purchase money for clergy reserves remitted to England by the commissioner of crown

lands, the pecuniary aid proposed to be given to the

Presbyterians, Wesleyans, and Roman Catholics, amounting to three hundred pounds to be charged on

I have to acquaint you in reply that the Lords Commissioners of the Treasury have sanctioned at my recommendation the several grants which you propose; and as I considered the memorial of the Presbyterian Ministers not in communion with the Church of Scotland entitled to favorable considera-I have also recommended that an allowance of seven hundred pounds should be made to them, on your approving of the manner in which the grant is to be applied, and you are therefore authorised to appropriate in the whole the sum of four thousand pounds instead of three thousand three hundred pounds, as proposed in your despatch.

I am not prepared at present to decide on the in crease of the Missionaries from thirty to forty-five as suggested by you, and this addition to the Ecclesiastical Establishment of Upper Canada must therefore remain for further consideration.

I have, &c.

GODERICH. (Signed)

MAJOR GENERAL, SIR JOHN COLBORNE, K. C. B.

A true copy,

J. JOSEPH.

Extract of a Despatch addressed by Lord Goderich to His Excellency Sir J. Colborne, dated 1st January, 1833.

"Besides the relief afforded by the removal of the charge on account of the Clergy of the Church of England,—I have been induced with a view to the important object which I shall mention presently to limit to £2000 the grant for the chapels of Roman Catholies and of Protestant Dissenters. I may observe, however, that I have made this limitation with reluctance, and as soon as it may be possible to raise once more the amount of the grant, I think it will be advisable on many weighty considerations to afford the same contributions as before to the erection and repair of the chapels."

A true Extract,

J. JOSEPH.

Extract of a Despatch addressed by Mr. Secretary Stanley to His Excellency Sir John Colborne, dated 27th January, 1834.

"And considering the heavy charges to which the casual revenue will for some years be subject, I am compelled to desire that the grant in aid of the erection of dissenting places of worship shall continue to be £2000 instead of £4200.

"I have in a separate despatch authorised you to pay an allowance of £100 per annum to Dr. Macdonell from the casual revenue.

"With respect to the remainder of the surplus of £7,036, after deducting the amount of £3,900 for land payments and the last mentioned sum of £100, I shall not now lay down any positive instructions. I shall merely state that the society for the propagation of the gospel, owing to the withdrawal in the parliamentary grant, has announced its intention to discontinue the payments which it has been accustomed to make to its Missionaries in Upper Canada, and that I should be disposed, if possible to supply a portion of the deficiency from the funds at the disposal of the Crown.

"From the reports I have received from you, and from the society, it appears that there are now in Upper Canada 43 Missionaries, and that the clergy funds are sufficient to afford to each Missionary a salary of £100. The additional payments of the society probably amount to an average of £80 to each Missionary, or £3440 to the whole number of 43- I conclude therefore that the available portion of the surplus of the casual revenue, would be adequate to replace nearly the whole payments of the society, should such a measure be thought expedient; but I abstain from instructing you positively on the subject till I can receive any suggestions which may appear to you proper to be considered before a final decision be adopted, you will therefore have the goodness to favor me with a report on the steps which may seem to you advisable in consequence of the withdrawal of the payments heretofore made to their Missionaries by the society for the propagation of the Gospel, and in the mean while you will suffer to accumulate such surplus as shall remain out of the

Casual and Territorial Revenue, after defraying the several charges sanctioned by the preceding part of this despatch."

A true Extract,

J. JOSEPH.

(Corv.)

No. 21.

Downing Street, 5th August, 1834.

Sir:-

I have the honor to transmit to you the enclosed copies of a correspondence between this department, the Treasury, and the society for the propagation of the Gospel, by which you will perceive that from the first of April last, the whole charge of the Missionaries now doing duty in Upper Canada is to be borne by the local government. You must not however, consider yourself authorised to draw the entire amount of £6506 from the Casual and Territorial Revenue, which fund would be quite inadequate to such a charge; but after appropriating the clergy funds as at present, to so much of the Missionaries emoluments, as they will defray, you will only supply, from the Casual and Territorial Revenue, whatever additional sum may be be requisite to constitute a payment of 85 per cent on the former salaries of the Missionaries. In this manner the Casual and Territorial Revenue may be expected to meet, according to the calculation contained in the concluding part of Mr. Stanley's despatch, No. 54, of 27th January last, the object now in view.

Having afforded this explanation I have only to add my desire that you will take the necessary measures for making the present arrangement known among the parties interested, and that you will report without delay all casualties which may occur among the individuals whose names appear in the list of the society as at present employed in Upper Canada.

I have, &c.

(Signed)

T. SPRING RICE.

Major General,

SIR JOHN COLBORNE, K. C. B.

A true copy,

J. JOSEPH.

(COPY.)

Downing Street, 23rd April, 18344

Sir:—

In reference to two letters from the under-Secretary of State for this department, dated respectively the 21st November, 1831, and 18th January, 1832, proposing to relieve the parliamentary estimates from very extensive charges for the support of the Church, and the promotion of Education in the North American Colonies, I am directed by Mr. Secretary Stanley to acquaint you, for the information of the Lords Commissioners of the Treasury, that he fears it will be unavoidable to apply to Parliament for the continuance of a vote to the amount of £4000, which at the date of the above mentioned communication, it was hoped might cease without inconvenience after the present year.

In conveying to you this opinion, I am desired by Mr. Stanley to recapitulate the circumstances on which it is founded; merely observing in the outset, that the object in view is not to increase the Clergy estimate from the amount to which, by gradual diminution, it has already been reduced, but only to render the further reduction of £4000, which, under the present arrangement, is to take place next year, contingent upon the termination of existing interests.

Until the year 1832, payments had been made to the Clergy out of the Army extraordinaries, and out of the grants on various Colonial estimates to the amount of £9500, but in the year 1832, all these payments were collected into one distinct estimate styled the North American Clergy Estimate, and it was intimated that on the death of the individuals holding the benefices or offices for which application was then made to Parliament, no grant would be asked for their successors. In the reduction effected by this measure, provision was made, it will be observed, for the persons actually in employment in the colonies, at the same time it was proposed that Whereas previously, a grant of £16000 had been voted annually to the society for the propagation of the Gospel, the grant in the year 1832, should be limited to £12,000, and that in every following year it should be reduced by a diminution of £4,000 until it should cease.

In the abolition of this latter grant, no provision was made as in the other case, for the parties actually in employment in the colonies.

In consequence of the withdrawal of the aid heretofore received from Parliament, the Society for the
propagation of the Gospel appears to have found it
impossible to maintain its former establishments; and
it announced last year, that in Upper Canada where
Government had been able to provide an annual
payment of £100 to each Missionary at present employed, the present average being £200, the allowance of the society to its Missionaries would be discontinued after the year 1834; and that in all the
other North American Colonies they would be reduced one hulf after the year 1835. The communication of the society to the Bishops of Quebec and
Nova Scotia, embodying these determinations, accompanies this letter.

The intelligence of the measures above described appears to have excited much alarm and disappointment in the Colonies both among the Missionaries and among the congregations committed to their care. On behalf of the Missionaries, Mr. Stanley has been called upon by various and earnest appeals to him to consider the hardship of depriving these ministers of the salaries which were offered to their acceptance when they were induced to quit their homes for their present distant employments. On behalf of the congregations, many of them the inhabitants of remote and thinly peopled settlements, his attention has been directed to their poverty; and to the extreme difficulty which they must experience in finding a suitable maintenance for a minister, after providing, as they are at any rate required to do, for the erection and repairs of a church and for the building of a parsonage house.

One parish in the province of New Brunswick is at this moment severely pressed by a debt which it has been obliged to contract in execution of the lat-

ter purposes. On a review of all the representations which have reached Mr. Stanley, he cannot but regard it as much to be lamented, that the Missionaries should not receive the emoluments of which the expectation was held out to them when they proceeded to the colonies. The principle of protecting persons actually in employment from loss was sanctioned by Parliament in the case of the rest of the North American Clergy;—and although there are unfortunately not the means of carrying this rule fully into effect in the case of the Missionaries, Mr. Stanley feels the justice of acting upon it so far as circumstances will permit.

Such being the conclusion at which he has arrived, it remains to describe the manner in which he would endeavour to carry it into execution. In order more clearly to explain his views a comparative statement has been prepared, which is hereto annexed, shewing the funds which were appropriated to the payment of the Missionaries in 1832 (the latest year for which complete accounts could be rendered) and the funds which it is proposed to apply to the same use hereafter.

The payments made by the Society for the propagation of the Gospel in 1832, amounted to £22,294; but as £12,000 was granted to the Society by Parliament in that year, the sum actually drawn from its own resources was £10,294.

The Society has declared that it is willing to continue to bear an expenditure to that amount. Now it will be seen from the statement to which I have alluded, that, if the Society were relieved from all charge on account of the Missionaries of Upper Canada and Nova Scotia, and if it were not called upon for a larger payment than £3,800 in New Brunswick, the entire demand upon it for maintaining the present establishments in North America would fall within the prescribed limit of £10,294. The question for consideration is whether the government can undertake to afford the required relief in the colonics above mentioned.

Mr. Stanley is constrained to acknowledge that considering the limited means at its disposal, the government can neither with propriety engage to provide the full amount of the salaries of Missionaries in Upper Canada and Nova Scotia, nor yet to supply the difference between £3,800 and the full amount of the salaries in New Brunswick. Much as he laments the fact he perceives it to be undeniable, and he sees for it no remedy. But he would not on that account abstain from making such an effort on behalf of the clergy as is practicable, and commensurate with the means which Government can command. The Lords Commissioners of the Treasury are aware that in Upper Canada, where the crown revenues already contribute a sum of £3,630 in aid of the payment of Missionaries, such a further sum could, though not without difficulty, be derived from the same source, as would constitute a payment of eighty-five per cent. on the entire amount of their salaries; and in New Brunswick, even if the Territorial Revenue be made over to the Assembly, on the moderate terms on which it has been offered to that body, the commuted revenue would still afford the small sum which would be requisite in addition (in addition to the amount of £3,500) for a payment of eighty-five per cent, on the present salaries of the Missionaries.

In Nova Scotia there are no local resources available for the object in view; but if Parliament should convert into a vote for the clergy of this colony, the grant of £4000 intended to be made to the Society for the propagation of the Gospel this year, and should continue the vote during the lives of the present Missionaries, the amount would suffice to make on this station a larger payment than was contemplated by the society in the communication to the Bishops in North America, to which I have already adverted.

Such are the arrangements under which Mr. Stan ley thinks that, from the 1st April, 1834, His Majesty's Government might undertake to relieve the Society for the propagation of the Gospel from all charge on account of the Missionaries at present in Upper Canada and Nova Scotia; and from all charge above £3,800 on account of the Missionaries in New Brunswick; the society being engaged to make the remaining provision requisite for the support of its clergy employed in North America. It has been ascertained by Mr. Stanley that the society would cheerfully acquiesce in such a plan. I am therefore to request that you will acquaint me whether it meets the concurrence of the Lords Commissioners of the Treasury, and whether their Lordships would be prepared to sauction the proposed employment of a part of the Crown Revenues of Upper Canada and New Brunswick, as well as the application which, if these recommendations be adopted, must be made to Parliament for the appropriation and continuance, in favor of Missionaries in Nova Scotia, of the grant to be made this year to the Society for the propagation of the Gospel.

I am, &c.

(Signed) R. W. HAY.

The Hon'ble J. K. STEWART,

TREASURY.

(Copy.)

TREASURY CHAMBERS, 15th May, 1834.

SIR:

I am commanded by the Lords Commissioners of His Majesty's Treasury to acquaint you, for the information of Mr. Secretary Stanley, that my Lords having had under their consideration the circumstances urged in your letter of the 23rd altimo, with respect to the Missionaries in the North American Colonies by the Society for the propagation of the Gospel, cannot but admit, that the interests of the parties who have been induced to engage in the Missions by the stipends which the aid of parliament enabled the Society to offer should be protected, so far as may be consistent with the imperative demands for economy in every branch of the public expenditure.

My Lords are therefore willing with the view of alleviating the distress to which the Missionaries would be exposed by the very large reduction of their stipends, which is provided for by the society's letter to the Bishops of Quebec and Nova Scotia of the 1st July last, to accede to Mr. Stanley's recommendation for the adoption of such an arrangement as may ensure to the present missionaries the continuance of salaries somewhat below the rates they have

hitherto received, but exceeding the rates to which the society, if deprived of all aid, would be constrained to reduce them.

My Lords will accordingly sanction the appropriation out of the Territorial Revenue of Upper Canada, of a sum not exceeding £6,506 per annum, for payment of such stipends to the missionaries now doing duty in that province, as shall be equal to £85 per cent of the stipends they received from the society and from Government for the year ending the 1st July 1833, with the understanding that as the present missionaries drop off, this appropriation is to diminish and eventually to cease.

My Lords will likewise sanction the appropriation out of the territorial revenue of New Brunswick, of a sum not exceeding £552 per annum, in aid of the provision of £3000 per annum, to be made by the society as long as such aid shall be requisite for continuing to the missionaries already settled in that province, stipends, equal to £85 per cent of the stipends they received for the year ended 1st July 1833; but which aid is to be reduced and wholly discontinued as any dimination takes place in the number of the missionaries already engaged.

In further pursuance of this arrangement, and on adverting to the proceedings that have already taken place for obtaining from parliament the grant of £4000 in aid of the funds of the society for the propagation of the Gospel, my Lords conceive that it may be sufficient, that the Society should for the present year undertake to apply the whole of this grant to the support of the missionaries in Nova Scotia, assigning them such proportionate rates of stipend, with reference to what they received for the year ended 1st July last as that grant may afford the means of paying-and my Lords will be prepared to sanction future applications to parliament for such proportion of the grant of \$24000 as may be necessary to continue the payment of the rates of stipend to be assigned for the present year to such of those individuals now employed as missionaries in Nova Scotia as may remain in the discharge of their spiritual duties in that province. As these arrangements will take effect from the first ultimo, and as the society will have received the grant of £8000 for the year ending at that day, my Lords presume the society will be able and will consent to make good to the missionaries up to that period the rates of the stipend to which they will be entitled under this arrangement, instead of enforcing the whole of the reductions provided for by the letter of the Bishops in North America of 1st July 1833: my Lords also consider their sanction to have been given to this arrangement upon the distinct understanding that the society will be prepared to support the present remaining missionaries upon the scale adopted in the statement which accompanied your letter and especially that the allowances will be continued from its funds to the five Rectors in Lower Canada, and that no further claims on this account will in any event be made on the public revenue of this country or of the Colonies.

As the sole object of this arrangement, is to secure some competent provision for those individuals who have heretofore been engaged as missionaries—and as it is not intended to apply to any future missions or to any other system of Ecclesiastical establishment in these Colonies, my Lords would further reques

to be favored with a statement, specifying the names of the society's missionaries now employed in Upper and Lower Canada, in New Brunswick and in Nova Scotia, the periods at which they were sent out by the society, the places at which they are stationed, the amount of the stipends they received prior to the 1st July 1833, either from the society or from the Colonial funds or other sources, and the amount of the stipends to which they will now be entitled; and my Lords conceive it will be proper, that copies of these statements should be transmitted to the Governors of each of the respective Colonies, with directions to report all casualties that may occur amongst the individuals, whose names appear in them, in order to the gradual reduction and eventual discontinuance both of the applications to parliament and of the appropriations of Colonial funds as the parties may die off, or otherwise remove from or resign their missions.

I am &c.

(Signed)

J. STEWART.

R. W. HAY, Esq.

&c. &c. &c.

[See Statement, page 12.]

Copy of a Letter from R. W. Hay. Esq. to the Reverend A. Campbell, dated,

DOWNING STREET.

5th July, 1834.

In my letter of the 30th May last, I acquainted you that the Secretary of State was in communication with the Lords Commissioners of the Treasury, respecting the reduction in the income of missionaries employed in the North American Colonies, which the Society for the propagation of the Cospel had been compelled to mike, in consequence of the discontinuance of the parliamentary aid formerly granted to that society.

I am now directed by Mr. Secre-Mr. Hay 20d April, do Lith May: Mr. Stewart 19th May, do 24th May, do 27th John, tary Spring Rice, to transmit to you the enclosed copies of the correspondence which has passed between this department and the treasury on the subject; and I am to request that you will inform me whether the Society for the propagation of the Gospel are prepared to acquiesce in the arrangement proposed in my letter to the Secretary of the Treasury, dated the 23d April last as modified by the communications received from that department dated 15th May and 27th June last.-More especially I am directed to inquire whether the Society will consent to make that provision for the pensions of Missionaries and their widows which is demanded by the Lords Commissioners of the Treasury; and whether as assumed by their Lordships, the Society will be willing to make good to the missionaries, up to the first of May last, the stipends to which they will be entitled under this arrangement, instead of enforcing the reduction provided for, by the letter to the Bishops of Quecer and Nova Scotia, of the 1st July 1833.

I am &c.

R. W. HAY. (Signed)

Copy of a Letter from the Rev. A. M. Campbell, dated.

> GREAT QUEEN STREET. July 28th; 1834.

I am directed by the Society for the propagation of the Gospel in foreign parts to transmit to you, for the information of Mr. Secretary Spring Rice, the enclosed extracts from the minutes of the Society-and also to acquaint you that during the year ending on the 1st of May last, the missionaries in British North America, received sums amounting to 85 per cent, on their former salaries.

I am &c.

A. M. CAMPBELL,

Secretary.

R. W. HAY, Esq.

&c. &c. &c.

Extract from the minutes of the Society for the propagation of the Gospel in foreign parts-dated,

> LINCOLN'S INN FIELDS, July 18th, 1834.

At a general meeting "read a letter from R. W. Hav Esq. dated Downing street, July 5th 1834, forwarding copies of a correspondence between the Colonial Office and the Treasury—and inquiring whether the society are willing to acquiesce in the arrangement agreed upon by those two departments, and to pay the pensions mentioned by the Trensury, and to make good to the missionaries, up to the 1st of May last, the stipends to which they will be entitled under the new arrangement."

"Resolved, that in consideration of His Majesty's Government having undertaken to pay about \$5 per cent on the salaries of the existing missionaries in Upper Canada, Nova Scotia, and a part of New Brunswick, (provided such missionaries were actually employed at midsummer 1833,) and also to make provision for the pensions of those missionaries and of their widows, according to the terms agreed upon by His Majesty's Government in the year 1813."

"The society consent to appropriate annually, from their funds, a sum not exceeding £10,285 for the payment of the salaries of the like existing missionaries in Lower Canada, the remaining portion of New Brunswick, Newfoundland, Prince Edwards Island and Cape Breton, and of the pensions to which those missionaries and their widows shall be entitled under the terms agreed upon in the year 1813

No. 21.

Downing Street, 22nd February, 1835.

Sir:-

I have the honor to acknowledge the receipt of your despatch dated 18th April last, accompanied by a memorial from the Synod of the Presbyterian Church, requesting assistance from His Majesty's Government. It appears that the number of Presbyterian Ministers in Upper Canada is 25, of whom 19 receive salaries out of the grant of £1000 from the Casual and Territorial Revenue, and the remainder depend solely upon their congregations for support. I have much satisfaction in acceding to your recommendation, that in order to afford salaries of £57 each to these latter ministers, an addition of £350 should be made to the annual grant to the Scotch Church from the Casual and Territorial Revenue.

But it is evident that this new charge, together with another which I sanction by my despatch, No. 21, of this day's date, would be liable to render the burthens on the crown revenue greater than the receipts unless relief be afforded in some other direction. On this ground I have been induced to reconsider the instructions conveyed to you by my predecessor on the 22nd July last, for applying the interest

on instalments of the purchase money of Clergy Reserves to the improvement of land; and I have the honor to authorise you to appropriate that fund, as formerly, to the payment of salaries of Church of England Missionaries—an arrangement which will of course materially diminish the pressure on the crown revenue for the maintenance of the salaries pledged to the existing Missionaries in Upper Canada.

In sanctioning the present augmentation of the Scotch Church in Upper Canada, I would remind you that the whole grant proceeds from the bounty of the Crown, and although it would not on any light grounds be curtailed or withdrawn, yet it may be well to intimate to the Presybtery, that His Majesty's Government reserves its right of revising the grant at any future time, should the circumstances of the colony render such a proceeding advisable.

I have, &c.,

(Signed)

ABERDEEN.

#### AT COBOURG. PARSONAGE

~~~~~<del>```</del>\$\$\$

F. B. HEAD.

The Lieut. Governor transmits to the House of Assembly with reference to its address of the 18th ultimo, and to his Message to the House of the 28th, the accompanying communication and documents from the Reverend William Macaulay, relative to the Parsonage House erected at Cobourg, during his incumbency.

Government House, 12th April, 1836.

INSPECTOR'S GENL'S OFFICE, TORONTO, 29th March, 1836.

Sm:-I have the honor to state for the information of His Excellency the Lieut. Governor, with | J. Joseph, Esq. &c. &c.

reference to your communication of the 25th instan that "the correspondence and vouchers" alluded to by the Assembly appear to have reference to the authority by despatch for the payments and the correspondence leading to those despatches.

As relates to the sums issued for the purposes therein mentioned, they have been contained in the Blue books furnished the Assembly for the last three years.

I have the honor to be,

Sir.

Your most obedient servant,

GEORGE H. MARKLAND,

Inspector General.

Letter from the Rev. Wm. Macaulay in relation to the Parsonage House at Cobourg.

TORONTO, March 29th 1836.

SIR :-

In answer to your letter of the 22d instant, enclosing a copy of an address of the House of Assembly, to His Excellency the Lt. Governor, wherein they require returns and vouchers for a sum of £300, paid in 1824, to the Reverend William Macaulay, and others, in aid of a Parsonage House in the township of Hamilton, I beg to hand herewith several documents belonging to the Officers of that Parish, and which they request when the purpose is served may be returned to them.

No.1 Is the agreement entered into by Robert Henry and Walter Boswell Esquires, with Levi Cole, for the Parsonage House in Cobourg, in the township of Hamilton—date 1824, Jan. 31st.

No. 2 Contains the specifications, annexed to the above agreement.

No. 3 Is the Contractors bond for a due performance of the agreement.

No. 4 Is a receipt by the Agent at Cobourg for the Bank of Upper Canada, for the £300 in question paid in to him by one of the Church Wardens.

The details of the application are to be given, not by the Minister, but by the Church Warden—who, I am confident, can in every particular account for them.

The House itself stands at present, and is occupied by the new incumbent, Rev. A. N. Bethune, as Mr. George S. Boulton, M. P. P. for that county, and Hon. Z. Burnham, or any others who may be acquainted with that village can testify.

Mr. Mackenzie himself, the mover of the address, in a narrative of a tour through that part of the country, published by him, shortly after the erection of the Parsonage House in question, complimented it, and, I think, justly, as one of the ornaments of Cobourg.

Since that time I laid out, myself, nearly onehundred pounds in completing it, and my successor has been at a generous cost in embellishing it.

When I left Cobourg to officiate in Hallowell, it was on the understanding that I was to enjoy in the latter parish the same advantages which I enjoyed in the former—and as the question has been agitated without my asking it, I beg now, formally, and respectfully, to submit to His Excellency the Lieutenant Governor, the justice of the claim of my present parish to the sum of £300, out of the same fund for a similar purpose—and of myself to an allowance for rent during the eight years that I have been kept out of it.

And have the honor to be, Sir,

With respect,

Your obedient humble servant,

WILLIAM MACAULAY.

J. Joseph, Esq.

Sec'y. to His Excy. the Lt. Gov. &c. &c. Govt. Office, Toronto.

Articles of Agreement had, make, concluded and agreed upon this Thirty-first day of January, in the year of our Lord, one thousand eight hundred and twenty-four, Berween Robert Henry and WALTER BOSWELL, Esquires, Churchwardens of the Township of Hamilton, in the District of Newcastle of the one part, and Levi Cole of the said Township. Carpenter, of the other part—wittnesseth that for the considerations hereinafter mentioned he the said Levi Cole doth hereby for himself, his Executors and Administrators, covenant, promise, and agree to and with the said Robert Henry and Walter Boswell and their successors in manner and form following:—that is to sny, That he the said Levi Cole, his Executors, Administrators or Assigns, shall and will build, make and erect in and on a certain piece or parcel of land adjoining the church-yard in Cobourg, in the said Township, on such part or parts of the said ground as the said Robert Henry and Walter Boswell or their successors shall or may direct, a dwelling house with a cellar under the same, a kitchen, stable and privy and dig a good and sufficient well and enclose the whole of the ground on every side except that next to the church-yard. That the said works shall be made and creeted according to the plan and elevation hereunto annexed, as far as the same are designated by such plan and elevation and in other respects according to the specification hereunto annexed. That the whole of such erections and works shall in every respect be done in the best style of workmanship and the timber and other materials used therein shall be of the best kind and sort, and the doors, flooring, partitions, clapboards, lathing, and every other material requiring it shall be well and sufficiently seasoned. That the whole of the said work shall be finished on or before the first day of October next ensuing the day of the date hereof, and that in case the said work shall not be fully and completely finished on or before the said first day of October next, he the said Levi Cole, his Heirs, Executors or Administrators shall and will well and cally pay or cause to be paid unto the said Robert Henry and Walter Boswell or their successors daily and every day the sum of ten shillings of lawful money of Upper Canada us damages now here assessed and settled for the non-performance of this agreement by the time aforesaid, and not in the nature of a penalty. In consideration whereof the said Robert Henry and Walter Boswell for themselves and their successors do hereby covenant, promise and agree to and with the said Levi Cole, his Executors and Administrators, that they the said Robert Henry and Walter Boswell or their successors shall and will well and truly pay or cause to be paid unto the said Levi Cole, his Executors, Administrators or Assigns, the sum of three hundred pounds of lawful money of Upper Canada, in manner following:-that is to say, the sum of fifty pounds part thereof in three months from the signing of these presents; the further sum of fifty pounds when the whole of the buildings shall be roofed and clap-boarded, and the residue of the said sum except as hereinafter mentioned, when the said work shall be completely done and performed, and shall and will assign to the said Levi Cole, his Executors, Administrators or Assigns, pews in the church of Cobourg aforesaid, which remain undisposed of to the amount of sixty pounds according to their present valuation, of which pews the said churchwardens or their successors are to have the first choice and the said Levi Cole the second and so on alternately until the said Levi Cole, his Executors, Administrators, or Assigns shall have chosen pews to the amount of the said sum of sixty pounds.

Provided always, and it is hereby agreed by and between the said parties hereto, and it is the true intent and meaning of them and each of them, that the said Buildings and Works consisting of a dwelling house according to the plan hereunto annexed, a cellar under the whole of the said dwelling house, a kitchen of a story and a half high, the said kitchen being in the clear from the floor to the ceiling, of ten feet in heighth, a stable and loft over the same, and the other matters mentioned in the specification annexed, shall be well and completely built and finished in the best style of workmanship suitable in all respects for, and consistent with the plan and elevation hereunto annexed, notwithstanding any defeet or omission in the said specification, so that by reason of such defect or omission the said Levi Cole, his Executors, Administrators, or Assigns shall not be required to add any other ornamental work or other thing more than is necessary to complete the said House and Buildings in a good and sufficient manner, according to the intentand meaning of these presents; provided also, and it is hereby further agreed and understood by and between the said parties hereto, that the said Robert Henry and Walter Boswell, or their successors, shall provide for and on account of him the said Levi Cole, his Executors, administrators or assigns, all the nails, paint, glass, locks, latches, pullies, hinges and finger places necessary for the said buildings, when and as they may be respectively wanted for the same, the costs and charges of which are to be allowed by the said Levi Cole, his executors, administrators or assigns, out of the last cash payment to be made by them the said Robert Henry and Walter Boswell or their successors to the said Levi Cole, his executors, administrators or assigns, in witness whereof the said parties to these presents have hereunto set their hands and seals the day and year first above written.

> ROBERT HENRY, (L. S.) WALTER BOSWELL, (L. S.) LEVI COLE. (L. S.)

Scaled and delivered in the presence of JOHN BOSWELL, EDWARD BOSWELL.

The plan, elevation and specification herein mentioned as being annexed hereto have been signed by the several parties hereto, and are to be taken and considered as part of these presents, although notannexed as herein mentioned.

ROBERT HENRY, WALTER BOCWELL, LEVI COLE.

Witness

JOHN BOSWELL,

EDWARD BOSWELL,

SPECIFICATION REFERRED TO IN THE ANNEXED AGREEMENT.

CELLAR.—To be under the whole of the dwelling house. To be six feet in the clear from the bottom to the sleepers of the ground floor. The walls to be of stone. The stones above the ground to be flat stones, and well faced on the outside and pointed. A partition to be made across in either direction that may be chosen by the church wardens, with a door and good lock, a receiver for the ashes of sufficient dimensions of brick or stones, with a sheet iron door and hinges.

GROUND FLOOR.—The front entrance door of two inch styles. The four lower pannels bead and flush. The two upper raised and moulded. The inside doors to be six pannelled, raised and moulded, with styles of one inch and a half, mortice locks, finger plates and rising hinges. The glass of the windows to be of such dimensions as the church wardens may direct. The door windows to have proper hinges and fastenings, and the others to be hung with weights and pullies, the floor to be of good, clear, well seasoned stuff, one inch and three-fourths in thickness, not to exceed six inches in breadth, to be tongued and groved. The whole to be lathed and plastered. The ceilings to have three coats, skirting boards and dadoes with mouldings.

First Floor.—Neat pannel doors [moulded with brass locks and finger plates, all lathed and plastered, with skirting boards, the sashes to be hung with weights and pullies.

STAIRCASE.—The bannister to be of birch.

KITCHEN.—Foundation to be of stone, secure against the frost, and the outside above the ground to be faced and pointed. A brick chimney and oven, a good iron crane in the chimney. This building to be a story and a half high, and to have two good rooms in the upper part, the whole lathed and plastered. The arches of the fire-places to be supported with iron bars. The boarding of the roofs under the shingles to be closely halved. The outside walls of the dwelling-house to be filled in with brick. The whole building to be completely painted, with three coats inside and out of white lead ground in oil, except the roofs which are to be slate color.

STABLE.—Twenty-five feet by twenty. Twelve feet posts, with three doors, stalls, racks and mangers. The floors of two inch plank.

A good WELL, to be boxed and stoned.

Privy.—A vault of seven feet deep, eight feet by four, stoned up, and a neat building sufficient for the purpose to cover the same.

A Fence all round the ground the same as round the Church-yard, but to be put up in a more substantial manner, so that it may not be affected by the frost.

> ROBERT HENRY, WALTER BOSWELL, LEVI COLE.

Witness,
JOHN ROSWELL,
EDWARD BOSWELL.

Union all Men by these Presents, that We, Levi Cole, of Cobourg, in the township of

Hamilton, in the district of Newcastle, Carpenter, Benjamin Throop, of the same place, Merchant, and Jeremiah Lapp, of the same place, Tanner, are jointly and severally held, and firmly bound to Robert Henry and Walter Boswell, Esquires, Church-wardens of the said township, and their successors, in the penal sum of seven hundred pounds of lawful money of Upper Canada; for which payment to be well and faithfully made, we bind ourselves, and each and every of us and our and each and every of our heirs, executors and administrators, firmly by these presents, scaled with our scals, dated this thirty first day of January, in the year of our Lord, one thousand, eight hundred and twenty four.

Now, the condition of the above written obligation is such, that if the above bounden Levi Cole, his executors, administrators, or assigns, shall, and do in all things, well and truly perform the covenants, conditions, stipulations and provisoes mentioned, expressed, and contained in certain articles of agreement, bearing even date with these presents and made between the said Robert Henry and Walter Boswell, of the one part, and the said Levi Cole, of the other part, in which a certain plan, elevation and

specification are referred to, and which are to be taken and considered as a part of the said articles of agreement, then the before written obligation to be void and of none effect, but otherwise to be and remain in full force, virtue and effect.

> LEVI COLE, (L. S.) BEMJAMIN THROOP, (L. S.) JEREMIAH LAPP, (L, S.)

Sealed and delivered in the presence of JOHN BOSWELL, EDWARD BOSWELL.

COBOURG, 10th February, 1834.

These are to certify that ROBERT MURRAY, Esq., has deposited in my hands the sum of three hundred pounds currency, which is payable to his demand.

JAMES G. BETHUNE,
Agent, Bank Canada.

£300 currency.

\* The interest on Loans in England is charged in this account, but does not appear in the accounts of the Receiver-General, the same being charged in England in Loan Account, therefore the actual Balance in advance by the Receiver-General is £2068 6s. 6d. Starling.

Salary of the Bishop of Quebec.

No. 5.

LOCAL REVENUES.

RETURN of all Local Revenues raised and appropriated under the authority of any Municipal or other body, not accounted for in the general Revenue of the Colony.

| REVENUE | Am't | collec | ted | EXPENDITURE. Am't expe | nde |
|---|--|--|---|---|-----|
| An Act of the Provincial Parliament, passed during the Session of 1834, erecting the Town of York into a city, and incorporating it under the name of the City of Toronto. By the said Act the Mayor and Common Council are authorised to levy a tax on proferty in the city and liberties, not exceeding in any one year 4d. in the | | 8. | d. | The expenditure is entirely devoted to local purposes, under the control of the magistrates. The accounts of the Trensurer of each District are published, but are of very great length, and it would be impossible to insert them in the Blue Book, the space required being so much larger than is here afforded. | . d |
| pound in the city, or 2d. in the liberties. The Magistrates of some towns are also allowed by Acts of the Province to levy rates for the improvement of the streets, &c., not exceeding £90 sterling per annum. The taxes applicable to local purposes levied and collected under the denomination of Rates and Assessments by Provincial Statute 59 Goo. 3 chap. 7, amounted to the following sums during the present year in the twelve Districts, ster | | | | | |
| ting respectively:— Ottawa | 16 14 13 13 13 13 13 13 13 13 13 13 13 13 13 | 143

N. B .- The above form no part of the Revenues subject to the general purposes of the Province.

No. 6.

MILITARY EXPENDITURE.

DETAILS of the Expenditure incurred by the Province of Upper Canada on account of its Military Defence.

The information under this head can only be furnished by the Commander of the Forces in the Canadas, under whose controul military expenditure is. The Province pays no part of its military expense. The military posts and works are in charge of the military expenditure is. the Ordnance Department.

RETURN OF MILITIA.

| Officers | |
|---------------------------|-------|
| | 1.520 |
| Non-commissioned Officers | 7.887 |
| Non-commissioned Officers | |
| Totales | 1,100 |

The Militia Force of Upper Canada comprises 71 Regiments of Infantry, 18 Troops of Cavalry, and 5 Companies of Artillery. 1.

ACCOUNT of Expenditure incurred by Great Britain for the Military Protection and in aid of the Civil Establishment.

| COMMESSARIAT. Pay of the Troops, Provisions, &c | • | ORDNANCE

| Remarks. | The Area of the several Townships is nearly the same about 12 miles by 10, and influde for the most part several stations where Divine service | is performed either in School Houses or private unes.—The first column contains the Mis- sionary's principal station, where service is regularly per- | gother places, the weather de-
termines the Missionary, the
distance to be travelled being
in some instances great. The
Glebes are for the most part | yield some profit. "There are 95 Wesleyan Methodist. Preachers,—five Primitive methodis; prezelers and from 55 to 60 Baptist Ministers,—besides Menonist, Tunkers, Quakers, and other sects. the number of whom cannot be ascertained. |

The British Crown 5s. 9d., currency-Shilling 1s. 2d.-French Crown 5s. 6d.-Spanish and American Dollars 5s. Half and quarters at the same rate.

British, Portuguese, and American Gold is received and paid at £4 9s., currency, per oz., Troy,—French and Spanish Gold at £4 8s. 74d.

AMOUNT OF COIN IN CIRCULATION.

Cannot be ascertained.

AMOUNT OF PAPER CURRENCY IN CIRCULATION.

There are three Banks in the Province Chartered by Act of the Legislature,—"The Upper Canada Bank, Capital £200.000,"
—"The Commercial Bank of the Midland District, Capital £200,000"—and "The Gore District Bank, Capital £100,000.—
Besides these there are three private Banks, having notes in circulation,—"The Agricultural Bank"—"The Farmers' Bank," and "The Bank of the People." There are also many of the notes of the Banks of Lower Canada, and of the United States is scirculation.

The amount of Government Debentures outstanding in this Province, bearing different rates of Interest, at the close of the year, was £159,165 sterling, and the amount of Debentures outstanding in England at the same period, at a reduced rate of Interest for the gradual liquidation of the debt in this Province, and for Internal Improvement, amounted to £241,600 sterling, which sum has been drawn on account of Debentures left for sale there.

ACCOUNTS KEPT IN

Canada or Halifax currency, of Pounds, Shillings, Pence, and Farthings.—The £ currency is equal to 18s. sterling. The relative value is 10 to 9.

To reduce Sterling to Currency-add one-ninth.

To reduce Currency to Sterling-deduct one-tenth.

WEIGHTS-AVOIRDUPOIS.

½ cwt.= 56lbs.—½ cwt.= 28lbs.—14, 7, 4, 2, 1, ½, and ½ lbs. 2 and 1 oz:—2 and 1 drachms, &c.,—according to the Standard of H. M. Exchequer, established in Upper Canada by Provincial Statute, 32 Geo. 111, ch. 3.

MEASURES.

The Winchester Bushel and its several divisions.

The Standard Yard of the Exchequer.

The Exchequer Gallon, & Gallon, Quart, Pint, & Pint, Gill, and & Gill, used for measuring Wines, Spirits, and other Liquors—According to the Standard of H. M. Exchequer established in Upper Canada by Provincial Statute, 32 Geo. III, ch. 3

No. 16.

Imports and Exports for the year 1835.

There being no Sea-port in the Province, there are no means of ascertaining the positive value of its Imports and Exports.—
The Province receives one third of the duties collected at the Port of Quebec, which for the present year amounted to £41,348 2 0.

Numerous steam vessels and schooners are constantly running during the navigable season between the different Ports belonging to the Province and the United States, on Lakes Ontario, Eric, and Huron.

The Imports consist of Woollens, Cottons, Linens, Hardware, Castings, Coals, Leather, Earthenware, and almost every description of British Manufactures.

The Exports consist principally of Wheat, Flour, Lumber, Pot and Pearl Ashes, and Pork.

For amount of sums received at the different Ports by the Collectors of Customs, being duties on Imports from the United States, vide page 15 of the printed accounts.

QUESTIONS.

Whether Common Jail or House of Correction?

Under whose jurisdiction, &c. ?

No. of Officers, and how appointed?

No. of Classes, Wards of Divisions, Work Rooms, Day Rooms, and Airing Yards, &c.

Dietary or Weckly Allowance, and Weekly Cost per head?

Employment and hard labor?

Bedding and Clothing, and cost per head?

Hours of Labor, &c. ?

Amount of earnings, how applied, &c.?

Whether a classification has been observed, if not, for what reason, &c.?

What duties are performed by the Chaplain—what provision made for instruction, and whether prisoners are supplied with Bibles and Prayer Books?

Attendance of a Surgeon, and whether separate apartments for the sick?

Reasons for non-employment of the prisoners with reference to the proper column.

Reasons for punishment by solitary confinement, whipping or irons. &c. ?

Any insane prisoner—name, age, and for what offence committed—how long in confinement—how long insane?

ANSWERS.

Both.

The Sheriff.

Guoler and Turnkey-by the Sheriff.

3 Classes—Debtors, Felons, and misdemeanours—Felons and Debtors rooms—some ground for exercise generally attached.

Averages about 4s. per week each prisoner.

Males breaking stones if sentenced, females washing blankets and scrubbing the Guol.

No clothing-mattrasses and 2 blankets, about 17s. 6d. per-

No particular hours.

For the benefit of the Prisoners.

Debtors and criminals always kept asunder—in some cases. convicts and untried prisoners are kept apart, but from the smallness of the gaols a proper classification cannot always be observed

No regular Chaplains, but the different Clergymen attend— The District generally supply the Gaol with Bibles and Prayer Books.

A Surgeon regularly attends—and separate apartments for the sick, if necessary, are provided.

No prisoner can be compelled to work, unless sentenced, and in some cases the danger of entrusting them with tools is the reason.

Solitary confinement for abuse of officers—whipping neverresorted to—irons if very abusive, or for attempt to escape.

Johnstown District Gaol.

Charles Bevins, 45 years old, confined since 10th Sept.1834 -- guilty of no crime.

Home District Gaol.

Margaret Finch. 40 years of age, destitute and deserted by her husband, committed in 1821—John Long, a nerro,29 years of age—dangerous to go at large—committed in 1832—Geo. Adamson 36 years of age, religiously insane, committed in 1832, and John Morrison, 47 years of age, frequently outrageous, committed in 1834.

Gore District Gaol.

James Johnstone, aged 30 years, confined for 5 days.

Niagara District Gaol.

Patrick Donaley, aged 44, committed for his wife's murder, 6th September, 1832.

Newcastle District Gaol.

Thomas Jones, aged 35, confined to prevent his doing harm, 10g months, period of insanity not known.

Ottawa District Gaol.

Sarah Beadley, agrd 30. no offence, destitute and starving, confined since 12th January, 1835.

(Signed)

D. CAMERON, Secretary..

SECRETART'S OFFICE, Upper Canada, March 28, 1836.

REPORT

ON

PETITION

ΩF

LEONARD WILCOX.

TO THE HONORABLE THE COMMONS HOUSE OF ASSEMBLY.

The Select Committee to whom was referred the Petition of Leonard Wilcox, beg leave to submit the following Report;—

It appears by the Journals of the 10th Parliament, a Petition of the same nature.

Select Committee, who recommended the Petitioner to apply to the

as the present was referred to a Select Committee, who recommended the Petitioner to apply to the Executive Government, (see Appendix page 40). On the following session of the same Parliament the renewed Petition of L. Wilcox was referred to a Select Committee, from whose report it appears Leonard Wilcox complied with the recommendation of the preceding Committee, and made an unavailing appeal to His Excellency Sir John Colborne, who referred it to the Executive Council, (a copy of his petition No. 2, and an extract marked also No. 2, being a Minute of a Report on that Petition by the Executive Council, are appended to this Roport). The Report of the above Committee will be seen in the Journals of that Session, in the Appendix page 136, and the evidence taken by the same attached to this (marked from 1 to 13).

At the last Session of this Parliament the Petitioner preferred another Petition, which was referred to a Select Committee to report thereon. That Committee met, examined several persons on the subject of the complaints in the Petition whose evidence is also annexed, viz., that William Warren Baldwin, Esq., who had been Attorney for the Petitioner in the trial of the seizure, C. C. Small, Esq., Clerk of the Crown and Common Pleas, on the nature of the Records in his Office in the case of the King vs. Wilcox and Edward Thomson, Esq., of the Township of Toronto, in this District, relative to the complaint about the Carding Machine.

The Committee also thought it advisable to request the Honorable William Allan, as no reference had been made to him since the 2nd Session of the 10th Parliament on the subject of Wilcox's Petition, to offer any further observations he thought necessary, or give any additional information that might be in his possession relative to the case;—That Committee did not report on the petition of Wilcox, the evidence obtained, or the other document laid before them by Mr Allan,—it appeared they were not procured sufficiently early to do so, and as was conceived they placed the case in a different view from what it had hitherto appeared. In the appendix to this Report will be found certain papers marked I'A to 8A, being the other vouchers explanatory of the proceedings of the Collector in the seizure, and mentioned above as furnished by the Honorable William Allan. No. 1A P's Mr. Allan's Report to Lieutenant Governor Gore, of the seizure, and the Lieutenant Governor's authority to the Attorney General to proceed in legal process to condemnation, dated in Oct. 1815. No. 2A P's a Writ of appraisement to the Hon. William Allan, late Collector of the Port of York, dated 11th April, 1816. No. 3A P's the indenture of appraisement under the above Writ, dated 13th June, 1816, amounting to £259 1s. 9d.

No. 4 A P's A—Bond between Mr. Allan, the late Collector of the Port of York, and Hial Wilcox, Stillwell Willson, and John Montgomery, dated 4th May, 1816, for a boat named the Lark, (supposed to mean the boat seized) with certain tackle, to be returned by the parties bound to the Collector of the Port. of York, in the want of the said boats being adjudged forfeited, together with the tackle and furniture of the same, and Stillwell Willson's receipt for the boat and certain tackle therein enumerated, in good order, dated 8th May, 1816.

No. 5 A Ps A—Bond and agreement appended thereto, between Mr. Allan and Wilcox, and others for certain perishable articles delivered up to Wilcox by the Collector Allan, to be returned if condemned by legal proceedings, by the parties bound to the Collector, dated 13th June, 1816. No. 6 A—A letter from the late Attorney General Boulton, transmitting a bond to Mr. Allan, late Collector of the Port of York and authorising to deliver up the Boat Lark, dated 7th May, 1816.

No. 7A—Account of Sundries seized from L. Wilcox and sold at auction by the late Thomas Hamiston, 26th February, 1817. By the above Vouchers it will appear that a certain boat and goods, the property of Leonard Wilcox, were seized and condemned by legal proceedings, the report of which seizure and the authority of the Government to take legal proceedings therein dated in October, 1815, and that the whole of the proceedings relating to the same were not wholly completed till 26th February, in the year 1817.

The Petitioner came to this Province in 1815, intending to become a settler, and has resided in the Province over since; he also brought with him a boat and eargo, his own property. On his arrival in the Port of York, he reported the boat and eargo to the then Collector William Allan, Esquire, through his Deputy, the late Mr. Thomas Hamilton, who seized them.

The boat and part of the goods were condemned by legal proceedings, and afterwards sold, the remainder of the goods restored to the Petitioner, very much damaged; the rigging and tacking were not sold with the boat, or ever accounted for by the Collector to the public or the petitioner, nor is any of the other proceeds of the soizure accounted for.

It appears the Petitioner imported a Carding Machine, and paid the duties thereon, which have not been credited to the public.

That the appeal already made to the Executive Government should fail, is an event that might have been anticipated, for, according to the system under which our public affairs have been allowed to be carried on for nearly half a century, the appeal was made to a Council wholly irresponsible, and composed chiefly of the same exclusive persons and influenced by the same political prejudices as have ever characterised that Body. It will be seen that the Executive Council excuse themselves from recommending the Petition for lands under present regulations, although whole tracts of country have been within these few years granted at almost a nominal value to a Company in London, who make a transcendant profit on the sale and withdraw the money from the country, while the annual instalments paid by the Company are spent by this irresponsible Executive Council, independent of the Legislature of the country; and many affluent persons, such as Dr. Strachan and others, have found no obstacles in these regulations from receiving large grants. It may be true, as the Report of the Executive Council alledges, that only the ordinary legal proceedings have been directed against this unfortunate and much injured man; but the Committee would forget the duty imposed upon them did they neglect to notice the fact in numerous instances, an ignorant violation of merely a prohibiting law has been met by a just relaxation of its provisions. It has, however, appeared in the administration of our public affairs that rigid justice and a merited relaxation have been applied by a rule depending upon party and political views.

The Executive Council, in their Report, forbear to notice (what they must have known if they really enquired into the case) that the amount realized in the seizure, under these circumstances of oppression, was never paid into the Public Treasury, or in any way carried to the credit of the public; and it does seem exceedingly disgraceful, that part of the cargo bought at a very reduced price at Auction by the Deputy Collector, was for sale at his private store.

The Committee are satisfied that abuses and oppression will continue while the Collector and the Government allow such practices to prevail, while the full and rigid exercise of a legal power for the protection of the trade and revenue of the country is put forward as a justification of the absolute ruin it brings upon an inoffensive man and his family, whose ignorance of the merely prohibitory law is allowed to afford him no relief. We have every reason as rigidly to expect the public interests to be zealously remembered by the payment of the collected revenue into the public chest. But, besides the fraud which appears to have been practised upon the public, it is revolting te all correct feeling that an affected appearance of legal proceedings should be considered a justification of oppressive measures—and the interests of the people made an excuse for the deeds, while their interests are forgotten when the money ought to be paid over. To what amount in past years this peculation has been carried on without correction, it is impossible to tell. When the Petitioner found himself and family in the country little better than plundered of his property, and I ft destitute in the world, it was equally his right and duty to pursue some means of getting a livelihood. For this haudable purpose he undertook to keep a Tavern, and, as a preliminary required by law-sought with great humility and assiduity to take the oath of allegiance, while in the case of seizure he was oppressed under the false pretence which was never paid over, in this case they refused, though it would have added to the Treausy. And when this persecuted individual undertook to open an Inn, in the meantime, till he could make as he might in any humane or civilized country expect to do, a successful appeal for the administration of the oath, he is both pertinaciously refused in all his applications to qualify himself, and cruelly persecuted for the fine for acting without the qualification. It ought to be matter of surprise that the same Honorable Colonel Allan, who was Collector in the above proceedings, was the same Colonel Allan who pursued this victim for the fine and costs in the If no relief was afforded by a grant of land, your Committee suggest the passing of an act compelling the Honorable Colonel Allan to indemnify him, inasmuch as the public have never received the proceeds of the property, to wach neither the Collector nor his Deputy can have, to say the least of it a better claim than the Petitioner.

COMMITTEE ROOM, HOUSE OF ASSEMBLY, 15th April, 1835.

All which is respectfully submitted, T. D. MORRISON, Chairman. TORONTO, 7th April, 1835.

SIR :

I have the honor to acknowledge the receipt of your letter of yesterday, as Chairman of a select committee of the House of Assembly, sitting on a petition from Mr. Leonard Willcox, relative to the seizure of a boat in 1815, wherein you refer me to certain evidence given by myself and others, copies of which you transmitted, and upon which you require me to send any observations I may be pleased to make. In answer to which I beg to say almost all those evidences, is matter quite new to me; I have never been questioned or called upon to give any evidence or information (as far as I could) to any committee except in 1829 or 1830, I attended on Dr. Baldwin and Mr. Jesse Ketchum, who was a committee to whom Mr. Wilcox's petition had been referred (this was in his presence) I could give little or no information to those gentlemen then; for till that moment I did not know, nor was I aware their was any such act I had any thing to do with, questioned in any way, and more particularly after a lapse of 15 years to be made a matter of enquiry before the Legislature. I could give them no information, being called upon without any previous notice, as I scarcely recollected any thing of the matter; and I did not know that a single document was comatable by me in relation to it. The following sessions I was given to understand this petition was brought forward ugain, Boulton to know if there was not some documents to be found either among his fathers papers or at the Crown Office; he said he could find none in the former place, and in the latter he said he had enquired and Mr. Cawdell told him there had been several there, but they had been examined often at different times by Mr. George Ridout (I think) and that now none are there except some account of costs taxed as paid to his father (Mr. Attorney General Boulton). If you think proper to call on me now I am rendy to go before you at any moment, with what few papers it has been in my power to collect, and to answer any questions the committee may choose to putto me; and when I have done that I have nothing more to sny.

I have the honor to be,

Sir.

Your obedient servant,

W. ALLAN.

THOMAS D. MORRISON, Esq., Chaiaman of a Select Committee.

Question put to William Warren Baldwin, Esquire.

Were you attorney in the case of the King against Leonard Wilcox, or Hial Wilcox, in January, 1816?—I was attorney for the defendant in the case of King against Leonard Wilcox on an information for smuggling in 1816.

Can you inform the committee what was done in the case, as Mr. Small, the Clerk of the Crown, has stated that certain proceedings were had, but it does not appear that the case ever came to trial?—By my docket it appears the cause was ready for trial at the March Assizes in York 1816, but could not be tried for want of time—it stood over, and was tried at the October Assizes, 1816, and verdiet was given for the Crown as to part of the goods—the docket does not detail the articles, and no doubt supposing the Collector and the defendant would take care to select the fee from the condemned goods, as attorney, I had nothing more to do in the matter.

Can you give the committee any other information in relation to the petition of Leonard Wilcox ?—I can only refer the committee to a report made by a select Committee of a former Assembly on the petition of the same Leonard Wilcox: I however think I may safely say, from my recollection, that there were many circumstances to shew that the goods were imported rather ignorantly than knowingly, against the law certainly, as far as I could know the matter from the statement at the time, there was no concealment of the goods.

W. W. BALDWIN.

COMMITTEE ROOM,
HOUSE OF ASSEMBLY,
January 22, 1830.

Committee appointed to enquire into the matter of the Petition of Leonard Wilcox.

JESSE KETCHUN, Esquire, Chairman.
JOHN CAWTHER, Esquire.
W. W. BALDWIN, Esquire.

LEGNARD WILCOX, the Petitioner, called and examined.

Where do you live ?-At Davenport, in this Township.

Did you not petition Parliament last Session !- Yes.

What answer?—On referring to the Journals of last Session (appendix page 40) it appears the Select Committee thus recommended Petitioner to make application to the Executive Government in the first instance.

Did you make application to the Government?-Yes.

What was the nature of your application?—This is a copy of my petition to the Governor (No. 1.)

What was the answer ?—Mr. Mudge told me it was referred to the Executive Council.

What answer did you get there?—This was the answer. (No 2 extract.)

Where did you get this paper ?-It was given me by Mr. Lee, the Clerk at the Council Office.

Did you get my further answer or explanation at the Council Office from Mr. Lee, or other person ?—Yes.

Who was Attorney General at this time?—Mr. Boulton late Judge Boulton.

Did you ever speak with Mr. Boulton on the subject?—Yes, about two years ugo; he said he could not recollect anything about it so long ago.

Why have you made all this delay in your affair?—I saw no prospect of succeeding—I have been making application these two or three years back.

Who was Collector of the port at the time?—Col. Allanand Mr. Hamilton was Deputy at the time of the serzure of my boat.

What judicial proceedings were had against the boat and goods?—Mr. Hamilton, the Deputy Collector, came and soized the boat and goods as he said by Mr. Allan's orders—as well as a recollect there were proceedings in the Court of King's Bench at to the boat, glassware, crockery and coffee. I pleaded to the prosecution, and the judgment of the Court was, that the goods (therein-mentioned) were condetened.

Why did you bring in goods against the law?—I did not know the goods, were prohibited: I entered the boat and goods, and gave a true invoice of all the lading to the Deputy Collector—It was after the cutry or making the report to the Deputy Collector that the boat and goods were seized.

Were the articles udjudged as condemned sold?—There were some of them a ld—I cunnot say weether all were sold.

What became of the proceeds 1—1 know not—I never could hear what became of the proceeds.

Where did you apply ?—To Mr. Hamilton, who told me be could not tell what became of the proceeds, but supposed it was turned in to the Attorney General. I also, applied to Mr. Geo. Ridout, as my Attorney, to make inquiry—he informed me that agreeably to my directions, he made enquiry at the Inspector-General's Office, and, that, as he was informed, no return had been made into that office as to the proceeds of the sale; and in the following spring Mr. Ridout again made the like enquiry as to the duty I paid on a carding machine which I brought in the spring of 1816. I paid \$7. as duty and free, &c., into Mr. Allan's hands by Benjamin Hoshel, for me—and there is no return made of this duty as I can find.

Are you prepared to say that all the allegations in your potition to the Legislature, as well as to the Lieut-Governor, are true?—They are, I am willing to prove all.

As to the fine imposed on you, and which you are informed, by the ticket of Mr. Loe, that it had been disposed of by the Executive Government, do you know how it was disposed of?—No, I'do not.

What proof have you of having been fined, for selling spiritous liquor in the House aircrafy licensed, so to do—(gave in Document No. 3, certificate of Clerk of the Peace.)

Did you come in as a settler with the boat and goods. Yes, and brought my family in with the first sleighing that following winter.

How do you show that you were refused the oath of allegiance?—(Gave in a copy of a petition to Hon. Samuel Smith, the administrator of the government. Document No. 4.)

What are the several sums of money that you have paid, as to be accounted for in the public accounts?

Busides costs, and the proceeds of the sale, which I cannot state.

MR. THOMAS HAMILTON, called as Witness.

At his desire the Committee put the following questions to Leonard Wilcox:

Were you not in the Province before the time you mentioned, with that same boat which was seized !—I came into the province in it, but it did not belong to me—and the time was about two months before the time the boat was seized.

Had you any hand in selling that cargo?—None, otherwise than assisting my brother to whom it belonged.

Did you ever pay any duties of entry for this boat, either first or last time ?—No.

Did you know that the boat was seized for not paying the duties on the first cargo?—It was detained on some pretence of such duties due, but not seized; the goods of first cargo were given up, as I understood.

MR. HAMILTON-examined.

Were you Deputy Collector at the time of the seizure of Wilcox's boat?—I was, in the absence of Mr. Allan in Lower Canada.

Was Mr. Allan absent at the time you seized the boat?—To be sure—sure he was.

For what cause did you seize the boat ?—For having goods on board which could not be entered.

Did not Wilcox give an invoice?—He gave the number of packages, but not their contents.

Did not Wilcox expect the packages to be examined ?-I suppose not.

Did he expect a permit?—He did, but I would not grant it till I had examined them; I did examine them, and the first article I discovered was a box of dry goods.

Did you question him as to the contents of the packages?— I did, he answered in some evasive way; I cannot say, it is now so long ago.

When you seized the boat and goods, what proceedings did you institute?—I put the goods into Mr. Allan's store, the Custom House; locked them up, and delivered them so to Mr. Allan on his return; the boat I hauled up a little on the beach, of which Mr. Allan also got the custody on his return, and this is all I did to be called as a witness in Court upon the trial.

WILCOX requested the following questions to be put to Mr.

What were the contents of the hox of which you spoke as containing the dry goods?—Pieces of shawls, pieces of muslin, and an adjustment of merchandize.

What do you suppose the value of those goods 1—1 cannot say, at this distance of time; it required three men to lift the

Can you say, even at a conjecture, what the value might have been?—I cannot; some articles are of doubtful description, and I could not say whether they are forfeitable or not; those were returned to Wilcox, that is, they were sent back to Mr. Allan's store—this was after trial.

Was there not a valuation had of them upon the seizure?— There was, as I suppose, but I was not present; Mr. Allan knows, I suppose. Do you know any thing about the proceeds of the sale of the boat and goods?—I do not, otherwise than understanding from Mr. Allan that the Attorney General's bill was about £20, and that he paid him.

Had you may of the crockery taken in the boat in your store for sale?—If I had, I bought them at the nuction and paid for them.

Were you Deputy Collector at the time of the sale?—I had nothing to do with the office at the time.

Jonas Duncan called.

What have you to say relative to arrival, entry, seizure, and condemnation of Leonard Wilcox's boat and cargo, in the spring of 1816, in the harbor of York?—I know nothing.

What of the carding machine, its entry and duty in spring of 1816?—I did come with this machine at the time mentioned, and I saw it entered in the Custom House, with Major Allan, who was there himself at the time. I brought the machine in for Leonard Wilcox—I received it from his brother, Charles Wilcox, who is a machine maker, for Leonard, being six months in his employment.

FEBRUARY 2nd, 1830.

MR. MONIS LAWRENCE called,

Do you know any thing of Wilcox's entry of his goods at the Custom House?—I went with Wilcox, in the month of August, 1815, to the office of Mr. Hamilton, the then Deputy Collector, and saw him deliver an invoice or bill of lading of his goods on board his boat, then in the bay.

Do you know that this bill of lading agreed with the cargo? - I cannot tell-about an hour after this the boat was seized.

Did you understand why the boat was so seized?—Mr. Hamilton told me it was on account of having contraband goods on board.

Did you understand that these goods, so considered as contraband, were suid to have been on board the boat at the time of this seizure, or they were alleged to have been on board at an earlier period?—I understood it was for the goods then on board; at the time of seizure. I was with Wilcox's brother when he entered the boat in the spring at the Custom House, the goods were lunded, and bout returned on her voyage, there was no difficulty about the first entry, the goods were mostly brought to my house.

Did Mr. Hamilton act as Deputy Collector in Mr. Allan's presence as well as in his absence?—He did. I understood he was a regular Deputy; I did not see his authority, but I understood he was his Deputy; I kept a public house, and had frequent applications from persons to let them know the Collector and his place, and I usually directed to Mr. Hamilton, and do not recollect any doubt of it.

THOMAS BRIGHT called.

What do know relative to the matter of Wilcox's complaintf —I know his boat was seized and sold as condemned goods.

Did Mr. Hamilton sell the boat himself?—He did, by auction.

What did you give for her?—I bought her very low. I did not want the boot, but she went so low I bought her, it was £20 or upwards, not much, it might be one or two pounds over, but I will not say more.

Did you buy her tacking, rigging. &c. ?—I did suppose I bought all at the nuction, but demanding the sails and rigging, I could not get them, they were not to be found, I never got them, I was told they were stolen; I still kept the boat, because she was worth much more, indeed she is worth more now at this day.

Where is she now?—By the shore side, owned by one of the Wallers, as I think.

What is she worth 1—Indeed I know not—I am not a judge—yet I think she could not be built under \$300—she is yet able to work, was no doubt a well built boat, better than usual on this side; she was from 50 to 53 or 4 feet keel, and 10 or 11 beam.

What might her sails he worth ?—In estimating her value a \$300. I meant to include sails.

To whom did you pay the value of the boat?—To Mr. Flamilton or Mr. Allan—I certainly paid the money, but to which I do not recollect, but I think to Mr. Allan.

Mr. JAMES NATION called.

Are you a clock in the Inspector Generals office ?-Yes.

Is there any entry in the books of the Inspector General's office of a seizure condemnation, sale or return of a boat and cargo belonging to Leonard Wilcox in the year 1815 in the harbor of York?—From June downward there does not appear any such entry as far as I can trace.

Is there any entry of a Carding Machine, as entered by Leonard Wilcox or Benjamin Hoshel in the year 1816 at York? There are entries of two Carding Machines; one of Edward Thomson, the other does not state the name of the importer, as far as I can find: It appears that the duty of 30 per cent was paid on both of those machines, it is my impression both machines were imported by Edward Thomson.

Hon. WILLIAM ALLAN called.

Were you in Lower Canada at the time of seizure of boat?— I was absent during the whole of the summer of 1815, returning in the fall, I can positively say I was not in York at the time of seizure. I may have been here at the time of first coming of the boat in the spring, though I am not certain.

Was Hamilton your deputy ?- Yes he was.

How long was bont kept before trial?-I cannot say.

Do you recollect the amount the boat and goods sold for?—Not the smallest recollection.

Do you know if any report was made to the Inspector General?—I do not—it is always usual to make return of seizure to the Inspector; and copy each to the Attorney or Solicitor General at same time. I presume it was done in this case also, but cannot say.

Was Hamilton your deputy at the time?—He was, and must presume he did so.

Did you receive the proceeds of the sale or any part?—I do not think I did receive any—there is some possibility of it—but I do not think I got any of it.

Did Mr. Hamilton as your deputy, make return of money to the Inspector General or Roceiver General?—None.

Do you know what became of the tackle of the boat?—I do not.

FEBRUARY 24th, 1830.

LEGNARD WILCOX again called.

What was the value of your boat and cargo as she arrived in York, at the most reasonable estimate?—Boat and goods at first cost, cost me £427 12 6, Provincial Currency, besides the cooking utensils on board the boat.

Can you estimate what was the value of that part of the goods returned to you, at their first cost and not in their injured state?—About £130, of these I sold a part but did not get their value.

Can you state the value of the articles condomned at their first cost?—The difference between the whole amount and that of the goods returned.

Can you say how much was sold by the collector or deputy collector?—I cannot—I rather think there was not much sold; I saw my goods, at about £100 worth in Mr. Hamilton's store or shop; he was then a Merchant, or Grocer and had goods for sale—not a large store, but he had one in the house where Mr. Willard now has his store.

What was the description of the goods belonging to you and which you saw in Hamilton's store?—Some large soup dishes, plates, knives and forks, quart decanters, pint decanters, and other glass were fit for an inn; the crate of crochery cost me \$200, and crate of glass about \$160, besides knives and forks.

MR. EDWARD THOMSON called.

Did you import into this Province a carding machine or machines from the United States, and when?—In 1816 I imported one.

Did you pay the duty required by law thereon?—Yes, at the time I imported it.

Did you purchase another Carding Machine from Mr. I. Wilcox, in 1817?—Yes, and I was satisfied the duties were puid thereon, as he produced to me a certificate of having done so from the Collectors of the Customs, before I got possession.

EVIDENCE OF C. C. SMALL, Esq.

Do you know of any proceedings had or recorded on a seizure said to have been made of the goods and boat of Leonard Wilcox, in the month of August, 1815?—As far as if have been able to ascertain from the records of my office, it appears that on the 13th of November, 1815, an information was filed by the Attorney General for the condomnation of a certain boat, with her tacklo and furniture, of the goods of one Hial Wilcox, for that one Leonard Wilcox did on the 12th day of August, 1815, import and bring into the Province of Upper Canada, to wit at York, from the United States of America, several parcels of goods and merchandise of the growth produce or manufacture of said United States of America—To wit:—20 barrels of sait; 2 boxes of glass, 3 tierces and 3 barrels of whiskey, 6 barrels of, oil, 1 crate of crockery, 1 crate of glassware, 4 pails and 7 chairs, 2 kegs of tobacco, and one keg of ginger, 1 demijohn spirits of turpentine, 1 box of hats, 1 box of saddlery, 1 trunk of dry goods, 1 box of clasvers saits, 1 bag of coffee, 1 trunk of sundries, 24 pieces of hollow ware, 1 cross cut saw, 3 kegs of nails, and 2 bags of shot.

On the 10th January, 1816, an appearance and plea was filed by W. W. Baldwin, Esq., as Attorney for the said Leonard Wilcox; on the 25th March, a record was made up and passed, and on the 20th December following, a bill of costs taxed, and further no proceedings appear to have been had.

CHARLES C. SMALL,

Clerk of the Crown Pleas.

MR. SAVAGE, called.

Are you Collector of Customs of this Port?-Yes.

Will you inform the Committee the mode pursued by you, in making seizures of goods and vessels containing articles prohibited by law to be imported into this Province?—In the first instance I obtain a Prace Officer—and if I can fully ascertain that there are such goods on board of any such vessel, I make the seizure of them; if I also ascertain that it is known to the master of the vessel with intention of fraud, I also seize the vessel and then report the case to the Inspector General.

What is the mode required of you to make an official record of such transactions, and how and to what officers do you, and are you required by law to make a return of such proceedings?— By an official letter to the Inspector General and then proceedings are had thereon as directed under the 4th Geo. IV.

Within what period by law are you required to make such returns?—Within 48 hours if the amount of Goods seized is under £40 agreeably to the before mentioned statute, in some instances where the case may be doubtful; time is taken by detention of goods to enquire into the circumstances before a report is made.

Copy.

To His Excellency Sir John Colborne, K. C. B., Lieutenant Governor of the Province of Upper Canada, Major General commanding His Majesty's Forces therein, Sc. Sc. Sc.

The humble Petition of LEGNARD WILCOX, of York, Carpenter,

SHEWETH-

That your Petitioner came into this Province from the State of New York in the year 1815, with the intention of becoming a permanent settler, with property to the value of £750 currency. That your petitioner purchased for his private way in the States, a number of articles that he was aware could

be obtained more reasonably there, than in this Province, among other things he imported a small crate of crockery, a crate of glassoure, and a few pounds (25) of coffee, in a new boat that cost him £75.

On reaching York Harbor he reported himself to Mr. Thomas Hamilton, the then Deputy Collector of Customs, who finding said crates and collect on board seized the whole as forfeited.

That at the expiration of 8 months certain parts of his property (the Bout, Crates, and Coffee excepted) were restored to your petitioner upon his giving security to pay their value if considered contraband; but in such a rainous state, from exposure to the weather, &c., during said eight months, that they were of little or no value.

That notwithstanding these losses your petitioner persovered in his original intention. (which was to keep a Public House), purchased a piece of Land on Yonge Street, about 13 miles from York, built thereon a commodious House and there expended considerable part of his means. He then applied for a license, but as he had not taken the Oath of Allegiance, it was refused. That your petitioner unsuccessfully applied to the then administrator of the Government for leave to have the oath administrator although he was at that time Town Clerk for Vaughan, and during the 3 several years was a Constable for the Home District and frequently served on Juries. Having embarked so large a part of his capital as above related and not being aware that the step he was about to take was contrary to law; your petitioner procured a friend to take out a license in his own name, for your petitioner's house, (and for which license your petitioner procured a friend to take out a license in his own name, for your petitioner is house, (and for which license your petitioner procured a friend to take out a license in his own name, for your petitioner for Boust, and under him your petitioner conducted the business of an Innkeeper for 6 months, in the year 1817, when he was summoned before the Magistrates, and upon the above facts being brought against him, was fined and paid £20 with £1 5s., costs, and obliged to shut up his house. That your petitioner the preceding year seeing the want of carding machines in this part of the Province and under the impression that the duty was only 10 per cent, imported one, but for it he was obliged to pay 30 per cent duty.

Misfortune pursued him and this machine was wrested from him in a manner too tedious to relate, and others are now benefiting by his enterprise.

Your petitioner is more minute than he probably ought to be, but he is desirous to shew that he came to the country with a good property for one of his condition, that his prospects and intentions were good and legitimate, that he possessed enterprise, and with ordinary success, might have been of advantage to the country. From the circumstances above detailed, and by which £ 1000 have been wasted, from sickness and from the charges of a large family, consisting of a wife and 7 helpless children, your petitioner finds himself, after striving with adversity during the best years of his life, reduced to poverty and distress.

And he is induced now to pray your Excellency in Council to be pleased to allow him a grant of land and on such terms, and such other relief as to your Excellency may seem fit, and as such will ever pray.

(Signed,) Youk, 6th March, 1829. LEONARD WILCOX.

GOVERNMENT HOUSE, 1st April, 1829.

Referred to the consideration of the Honorable the Executive Council.

By commund,

(Signed)

Z. MUDGE.

In Council, 2nd April, 1829.

The Council cannot under the present regulations recommend the petitioner for lands. An application respecting the tine imposed for selling Liquor without License, appears to have been disposed of by the Executive Government in 1826, and as to the goods seized so long ago as 1815, nothing appears to shew that any but the ordinary judicial proceedings were enforced against him.

Custom House, York, 3rd Oct., 1815.

e.,,

In consequence of several seizures of Goods, Wares, and Merchandize, of different descriptions, which have been imported into this Province contrary to law, and the circular instructions of 20th May last, received from the Provisional Lieutenant Governor's office, most of which are now in my possession and bonds given for the remainder.

I beg leave to trouble you to lay this before His Excellency the Lieutenant Governor, with a request that he will be pleased to order the necessary instructions to the Attorney General to do what is needful in proceeding against the said property for condemantion.

I have the honor to be,

Sir,

Your obedient servant,

W. ALLAN,

Collector of Customs.

Home District.

WM. HALTON, Esq., &c. &c.

LIEUT. GOVERNOR'S OFFICE,

York, October 21, 1815.

Sir,

I have the honor to transmit to you herewith, by command of the Lieut. Governor, a letter from Mr. Allan, Collector of Customs at this port, addressed to me on the subject of merchandize imported from the United States of America, contrary to law, and siezed by him; and I have his Excellency's directions to desire you will take measures for proceeding against the same to condemation conformably to law.

I have the honor to be,

Sir,

Your most obedient humble servant, WM. HALTON.

Secretary.

D'ARCY BOULTON, Esq. Attorney-General.

Britain and Ireland, King, De-

To WM. ALLAN, Esq.,

Collector of Customs at York.

GREETING

Whereas, we have been given to understand, by the information of D'Arcy Boulton, Esq., our Attorney-General for the Province of Upper Canada, exhibiting in our Court of King's Bench at York, in the said Province, in Michaelmas Term last past, that you had therefore seized to our use and the use of ourselves as forfeited, a certain bout with her tackle and furniture of the goods of one Hial Wilcox: for that several parcels of goods and merchandize, to wit: 20 barrels of salt, 2 boxes of glass, 3 tierces and 3 barrels of whiskey, 6 barrels of oil, 1 crate of crockery, 1 crate of glassware, 4 pails and 7 chairs, 2 kegs of tobacco, 1 keg of ginger, 1 demijohn of spirits of turpentine, 1 box of huts, one box of saiddles, 1 trunk of dry goods, 1 box of glauber salts, 1 bag of coffee, 1 trunk of sundries, 24 pieces of hollow ware, 1 cross cut saw, 3 kegs of nails and 2 bags of shot, not being goods and commodities of the growth, produce or manufacture of the Territories of the United States of America, were within the time, in the said information mentioned, imported and brought in the said boat by one Leonard Willow into the Province aforesaid from the said United States, contrary to the form of the Statute in that case made and provided: Whereupon our said Attorney-General prayed the consideration of our said court in the premises, and that the said boat with her tackle and furniture, and the said goods and merchandizes so as aforesaid seized and arrested, might for the reasons aforesaid, remain forfeited: Whereupon Proclamation being made, as the custom is, that if any one could inform the said court why the said boat. Sc., and the said goods and merchandizes should not, for the reasons aforesaid, remain forfeited, he might come and should be heard,

and the said Leonard Wilcox having done this, and the said Attorney General thereupon having prayed our writ of appraise-ment of the said boat, &c., and the said goods and merchandize: Therefore we command you, that by the onths of good and lawful men of the said district, you cause the said boat and her me-kle, and furniture, and the said goods and merchandizes, to be insty and fairly valued and appraised, and to cause an Indentity thereof to be made under the hands and seals of the said Appraisers and a counterpart thereof to be returned into the said. court at York, together with this Writ on the 13th day of April instant: Witness the Hon. Thomas Scott, Chief Justice at York, the eleventh day of April, one thousand eight hundred and sixteen, and in the lifty-sixth year of our reign.

JOHN SMALL, Clerk of the Crown.

This Enterture, made the thirteenth day of June, in the year of our Lord one thousand eight hundred and sixteen, and

in the lifty-sixth year of the reign of our Severeign Lord George the Third, by the Grace of God, of the United Kindom of Great Britain and Ireland, King, Defender of the Faith. Witnessetts that I, William Allan, His Majesty's Collector of His Customs at the Port of York, in the Home District of the Province of Upper Canada, by virtue of a writ of His Majesty's Court of King's Bench, to me directed and hereunto annexed have, upon the corporal oaths of Ezekiel Benson, Thos. Stoyles, William Smith, Junior, and Silas Crane, good and lawful men of the said Home District, viewed, numbered, valued, and apprized the boat, with her tackle and furniture, and the goods seized by Thomas Hamilton, Deputy Collector of the said Port of York, imported in the said boat from the United States of America by one Leonard Willcox, the same goods not being of the growth, manufacture, or Willcox, the same goods not being of the growth, manufacture, or produce of the said United States of America, to be sold by order of the Court of King's Bouch, in pursuance of an Act of the Parliament of this Province, passed in the forty-first year of the reign of our said Sovereign Lord King George the Third.

MEMORANDUM.-It is agreed this thirteenth day of MEMORANDUM.—It is agreed this thirteenth day of June, in the year of our Lord one thousand eight hundred and sixteen, between William Allan, of the town of York, in the Home District of the Province of Upper Canach, Esquire, Collector of His Majesty's Duties at the Port of York of the one part, and Leonard Wilcox, of the township of Vaughan, in the said district, Yeoman, of the other part.—Whereas the said William Allan, as Collector aforesaid, dld some time since seize several goods and merchandizes, together with a boat called the Lack. ral goods and merchandizes, together with a boat called the Lark, with her tackle and furniture, for that the same were unlawfully imported from the United States in the said boat by one Leonard Wilcox—And forasmuch as part of the said goods & merchandizes are of a perishable nature, & part thereof may not be judged liable to forfeiture, although liable to duties. It hath been agreed that the following articles; to wit, twenty barrels of salt, two boxes of glass, three tierces and three barrels of whiskey, six barrels of oil, one crute of glassware, three pails and seven chairs, two kegs of tobacco, one demijohn of turpentine, a box of hats, a box of saiddlery, a trunk of dry goods, a box of salts, twenty four of sandiery, a trunk of dry goods, a Dox of saits, twenty four-pieces of hollow ware, a saw, and three kegs of nails,—part of the said goods shall be delivered up to the said Leonard Vilcox by the said William Allan, to be at the disposal of the said Leo-nard Wilcox after the payment of the legal duties for the same, and finding security to the satisfaction of the said William Allan to pay the sum of two hundred and fifty nine pounds, the appraised value of the said goods so delivered up to the said Leonard Wilcox, as before mentioned, (if the judgments of His Majesty's Court of King's Bench shall condemn the said goods, together with other goods not delivered up). And the said Leonard Wilcox, who declares himself the true proprietor of the said goods, covenants and agrees that neither he or his brother Him Wilcox, who is the reputed owner of the same goods, shall either of them com-mence any suit against the said William Allan for or by reason of the seizure of the said goods, or any part thereof, or the present surrender thereof to the said Leonard Wilcox by the said William Allan, and in order that the said William Allan may be fully indemnified in his compliance with the wishes of the said Leonard Wilcox, Fle, the said Leonard Wilcox, further covenants and agrees with the said Meenard writcox, turner covenants and agrees with the said William Allan, that Srillwell Willson, now commanding a schooner on Lake Catario, and John Willson of the township of York shall onter into security with the said Leonard Wilcox for the performance of this agreement on the part of the said Hial Wilcox and Leonard Wilcox.

In Witness whereof the parties to these presents have here-unto set and put their hands and seels the day and year first within written.

LEONARD WILLCOX.

Witness hereto the word "Hial" being expunged and "Leonard" substituted therefor before execution.

REPORT

0F

COMMISSIONERS OF THE KINGSTON HOSPITAL,

FOR THE YEAR 1835.

WITH

VOUCHERS AND PLAN.

(Corr.)

To His Excellency Sir Francis Bond Head, Knight Commander of the Royal Honoverian Guelphic Order, Knight of the Prussian Order of Merit, Lieutenant-Governor of the Province of Upper Canada, Sc. Sc. Sc.

The undersigned Commissioners appointed by an Act passed in the second year of His Majesty's reign, "To superintend and "manage the erection of an Hospital in or near the town of "Kingston, and to purchase, or otherwise obtain, choose, and determine the site thereof."

MOST HUMBLY REPORT:-

That the annual Report of the said Commissioners' dated the 31st day of December, 1234, to His Excellency Sir John Colborne, late Lieutenant-Governor of Upper Cauada, to which your Excellency is respectfully referred, exhibiting a statement of the progress then made in the undertaking of which they were entrusted with the management, and was accompanied by Vouchers for all the Disbursements which they have made up to that period.

The several Contracts entered into, and all the work undertaken have been completed; with the exception of painting the interior of the building, which for want of funds has not yet been commenced, and of finishing the painting of the doors, frames and sashes exteriorly; which have received a priming cost. The building itself may be prenounced fit for occupation; although to render it complete in all its contemplated arrangement and thoroughly convenient for the treatment and accommodes of Patients, the apparatus of baths and water closets, for which most suitable compartments have been prepared, will eventually be required.

A large mound of earth dug from the foundation, which now impedes the approach to, and obstructs the aspects of the building, will require removal; and for the kitchen which is in the hasement story; and consequently eight feet below the surface of the ground, an era of forty feet square, fermed by an excavation of the soil flugged and faced with stone, according to the original plan, will be necessary to form a sufficiently commodious yard.

When the erection of the Kingston Hospital was first contemplated it was hoped that a suitable Grant of Public Land might be obtained for its Site;—but as it was found impracticable to procure this, and that moreover the reservations originally made by the Council in the Town Plot for such object, had been recently declared nocessary for the purpose of military defence. The Commissioners were obliged to incur the unforeseen expense of five hundred and forty pounds in the purchase of a block of ground for their purpose. This site they are happy to state is most eligibly piaced at a convenient distance from the town; on an elevated and salabrious position, overloaking the bay, and freely open to the water, and containing about seven acres.—

The building is capable of containing with ease one hundred and twenty beds, and in cases of emergency, one hundred and fifty patients might be accommodated in it. The wards are lofty, roomy, and well ventilated, and the house establishment is convenient; and the commissioners have the satisfaction to learn, that all who have visited and examined it have pronounced most favorably of its situation, plan and structure.

The inhabitants of the town of Kingston in petitioning the Legislature in 1831 for aid to build an Hospital, stated, that almost £1000 had been subscribed by them for that object, and it will be seen by referring to the accompanying copy of the original list, that they were justified by truth in making this statement. The list exhibits the sum of £1032 15s 0d, aitho £860 5s 4d only have been paid in, leaving an unpaid balance of £172 9s 8d, of which, owing to the numerous casualities by deaths which have since occurred, and other untoward circumstances, but a small portion is to be expected—accordingly, however, as any part of it may come into their hands, the commissioners will apply it with the same regard to economy which has hither guided them.

A general statement of all the monies received and expended by the commissioners accompanies this report, together with vouchers for all disbursements made since their former one.

By that marked No. 6. it will be seen that a balance of £18 16s 11d remains due by them to the superintendant of work, which is the only charge unliquidated.

In concluding this report, the commissioners feeling a deep interest in the success of an undertaking which the Legislature has entrusted to their superintendance, an undertaking originating in the suggestions of private hencelonce, but subsequently most liberally aided by public munificence, are induced to express their humble hope, that considering the advanced stage at which it has now arrived Your Excellency may see fit to recommend it to the Legislature, for the further extension of their bounty; in order that so important a public clarity may not fail soon to be put in a situation to fulfil the intentions of its contributors, and realize the hopes of the community, that it should become an asylum for the numerous applicants, which its central position, the great annual influx to this port of passing emigration, and other local causes are likely to produce.

While adverting to this subject, the commissioners feel induced to represent to your Excellency, that the Government Building, for many years occupied as the hospital of the Kingsten Ecmale Benevolent Society, with all its expensive apartments, has lately been consumed by fire, and all its unfortunate inmates scattered abroad.—That in consequence of this calamity a stop is necessarily put to the maintenance of an institution which for 16 years has proved of incalculable benefit to the efflicted and distressed from all countries, the number of whom for the three years preceding 1035, as by a return then made to Sir John Colbosal appeared to amount to no less than 305, who had been treated as indoor patients.

Report of Commissioners of Kingston Hospital. (104)

This circumstance cannot full to awaken the nuclety of the commissioners in common with the rest of the public for the completion and speedy operation of the new Kingston Hospital, and they are therefore emboldened to express their humble hope that Your Excellency, graciously considering the importance of the object of their solicitude, may see it to recommend to the Provincial Legislature a further grant of five hundred pounds to carry it into effect.

All which the undersigned commissioners most respectfully JOHN MACAULAY,

JAMES SAMPSON. E. W. ARMSTRONG.

KINGSTON, UPPER CANADA. 13th February, 1836.

OF THE

SELECT COMMITTEE

THE ANSWER

HIS EXCELLENCY THE LIEUT. GOVERNOR

THE HOUSE OF ASSEMBLY

BELATIVE TO A RESPONSIBLE

EXECUTIVE COUNCIL.

To the Honourable (the Commons') Houses of Assembly.

The committee to whom was referred the correspondence between His Excellency the Lieutenent Governor and the late members of the Executive Council of this province, liaving examined the various documents referred to them, and having carefully considered the subject discussed in the correspondence, submit the following

REPORT:

the truth of Lord Glenelg's opinion, that "the present is an ern of more difficulty and importance than any which has hitherto occurred in the history of this part of His Majesty s dominions," and not less are they convinced that the difficulty has been mcreased instead of being diminished, since the date of Lord Glenelg's despatch. ities at such a crisis that we are called to the discussion of hypestion of vital importance to the people of this Province: a question which in the opinion of the committee, is no less than this: whether we have, us we have been thught to believe, a Constitution: "the image and transcript of tilated and degraded Constitution.

which properties the transport of the properties has been produced, by the mal-administration of our provincial affairs, under Licutenant Governors Gore, Maitland and Colberne, has been so well known; and so general, that even the Colonial office seems to have been awakened to a sense of the necessity of ameliorating our ondition, by holding jout, the encouraging prospects of relief and reform. To our complaints, too long neglected and unredressed, attention was at length to be paid --Sir John Colborne, (with whose measures, maxims and advisers His Majesty's subjects had long been dissatisfied) was removed, and a Lieutenant Governor was sent out, to administer the affairs of the Province, in such a way that still people should have reason to be attached to the parent State, from sentiments of affection and gratitude, as well as from principles of duty. As he was a stranger to the Province, to its affairs and history, to the wants, sentiments and habits of its inhabitants; and as the measures complained of under Sir John Colborne's administration had been attributed, in a great degree, if not altogether, to evil advisers, much anxiety was left that the new-Lieutenant Governor should call to the Executive Council, persons in whose sound constitutional principles, integrity and prudence; the country could put confidence. The appointment of Messrs. Dunn, Baldwin and Rolph, therefore, afforded general and lively satislaction; not immixed, however, with serious apprehensions that the influence and presence of the old councillors, who were The committee are decrify convinced of supposed to have advised Sir John Colthe truth of Lord Glenelg's opinion that borne, would embarrass, His Excellency and the new Councillors, in the pursuit of a more impartial, conciliatory and constitutional system of Government. The House and the country were not then aware that this Executive Council had been used as a mere screen for the acts of the Lieutenant. Governor; on the contrary it was generally understood, that they were consulted on the affairs of the Province of the w

That the principles of the British Constitution were not put in practice as it regarded this Council, in one respect, was well known, & had been the subject of earnest complaint on the part of your Honorthat of Great Britain," or have only a mu- | 2/10 House; we allude to the fact that rersons had been appointed, or continued The increasing dissatisfaction which as Councillors, whose political opinions

and principles were in opposition to those houses of Parliament in Upper Canada, and of the people and their Representatives, been approved of by His Majesty's Govand in many cases to the expressed wishes ernment, after deliberate consideration, it ment;—as for instance, the contemptuous never been consulted; and, indeed, all the treatment given to Lord Goderich's des-measures subsequently adopted, so disappatch, as well as to its noble author. But pointed expectation, as plainly to indicate the country were ignorant how much the either that the Council were not consultaffairs of the Province had been conduct-led, or that the old members, with the umed by the arbitrary will of the Lieutenant pirage of the Lieutenant Governor, pre-Governor himself, with no other counsel dominated. than the secret suggestions and recommendation of unsworn, irresponsible and that the appointment of the new Councilunknown advisers.

nevertheless not aware of the extent to had really given his confidence to, and was which the unconstitutional proceedings of acting under the influence of secret and the Lieutenant Governors of this Province

had been carried.

Every day however, discovers new cause of complaint on the one hand, and the contemptuous indifference with which all com-

plaints are regarded on the other.

From the documents referred to the Committee, it pretty plainly appears that the Lieutenant Governor had not consulted the Council at all after the new Councillors were sworn in—(See the representations of the Council, hercunto appended, marked A)—although, during the interval between that event and their resignation. 3 weeks of anxious expectation on the part of the people and their representatives, had elapsed, and during that time His! Excellency had made various appointments, which he could not make advantageously or properly, without information that statute an Executive Council, and advice from some one.

His Excellency also refused to give the the King. Royal Assent to a bill, demanded by justice and humanity, and passed for more advise the King, and his Representative, than ten years, almost unanimously, by repeated and different Houses of Assembly; although, during the present winter, Lord to any particular time or subject. Gosford had informed the Legislature of

and intentions of his Majesty's Govern- is plain that the Executive Council had

Your Committee are forced to believe lors, was a deceitful manævre to gain Much and justly as the people of the credit with the country for liberal feelings Province had been dissatisfied with the and intentions, where none really existed; condition of our public affairs, they were for it was notorious, that tHis Excellency unsworn advisers. Under these circumstances, the Council seem to have been led, (in conformity indeed with a suggestion of His Excellency himself,) to examine the nature and extent of their duties, under the Constitutional Act, and having discussed the subject with His Excellency, personally, at the Council Board, they united, ten days afterwards, in an unanimous and respectful representation, in writing, to His Excellency, in which, after adverting to the critical state of public affairs, and the general discontent with the past administration, which no one can doubt, they state their views of the Constitutional Act. (31 Geo. 3, chap. 31.) as it respects the Executive Council; and draw from it the following conclusion:

"Firstly-That there is, according to

" Secondly-That they are appointed by

"Thirdly—That they are appointed to upon 'the affairs of the Province;'-no particular affairs are specified; no limitation

They represent, that according to our Lower Canada, that the Royal Assent Constitution, the Lieutenant Governor would be given by the King in Council, to should consult the Executive Council upon a similar bill which had been passed by the affairs of the Province generally, and the Parliament of that Province, and re- not merely occasionally, although (except served for the signification of His Majes- in certain cases where their concurrence ty's pleasure. Upon this refusal to assent is by statute expressly required,) His Exto a bill which had thus received the cellency would still be at liberty to reject sanction and approbation of both Houses the advice when given; and they recomof Parliament in Lower Canada and both mend, that, with the exception of those

ters as obviously appertain to them res-

pectively.

We have been careful to state the exact propositions of the late Council, as contained in their representation, because it is important to know what are the real points in controversy; and because His Excellency in various public documents, has given (to use the mildest terms) a very erroncous account of these propositions. and patronage, although nothing was proposed by the Council, except that which lency upon the affairs of the province, and. we have above stated.

the late Executive Council in their representation to His Excellency, have placed their duties upon the most moderate scale. It is merely proposed that the affairs of the province should be submitted for their advice, before the Lieutenant Governor exthem; and if the general business were as recommended, distributed into departments, it would obviously facilitate the reference of any matter by His Excellency for information of advice. Yet this simple proposition in the opinion of your committee, so reasonable to a candid, and so acceptable to any well constituted mind, is repelled by His Excellency with seeming indignation; and the Councillors, in a most arbitrary manner, coerced from their office, and, after their resignation, literally traduced: - Upon such official conduct (whatever the station from which it comes)your committee cannot forbear, freely to animadvert; for the country will, in vain look for talented and honorable men to fill the public stations, and aid the conduct of public affairs, if subjected to ignominy and reproach, without vindication by the reundertaken to serve.

cy's reply to the late Council—(hereto ap-| ty's service with known principles, and as

matters of so weighty or general a charac- ponded, marked B)—the discreditable aler as not properly to fall under any par- ternative offered them. It appears from ticular department, and therefore fitted for Mr. R. Baldwin's letter, that when he and the deliveration of the Council collec- his colleagues accepted the invitation to tively, the affairs of the Province should join the Executive Council, their political be distributed into departments to the principles were made known and very fully heads of which shall be referred ... h mat- explained to Sir Francis Head; and when jointly waiting upon him more formally to receive a united invitation, it appears he accepted their services with the avowed retention of the opinions they had hitherto publicly entertained and acted on, even declaring with great apparent frankness and magnanimity, that their seats in the council would afford them a better opportunity of confidentially presenting and urging their views. With such a latitude pro-He describes them as attempting to divest fessedly given them, it became their duty. him of his responsibility, and of his power in the opinion of your committee upon assuming their office, to advise His Excelin their opinion, was to the constitutional Your Honorable House will observe that manner in which it might be best administered, in the terms of their outh "for the good of the King and this Province, and for the peace, rest and tranquillity of the same:" such is the substance of Mr. Baldwin's manly and honorable letter.

Animated with these loyal and patriotic creises his own discretionary power upon feelings, and conversant with the condition and expectation of the country; it appears they joined in the representation dated the 4th of March, 1836, (hereto appended, marked A.)—embodying their united views in a manner unreserved, candid and respectful.

To this representation Sir F. Head sent a reply, also hereto appended (marked B.) concluding with the following words:

"The Lieutenant Governor assures the council, "that his estimation of their talents and integrity, as "well as his personal regard for them remain unsha-ken, and that he is not insensible of the difficulties to which he will be exposed should they deem it "necessary to leave him At the same time should "they be of opinion, that the outh they have taken "requires them to retire from his confidence, rather "than from the principles they have avowed, he begs that on his account, they will not for a moment hessitate to do so."

It appears to your committee that however sensible the Council might be to the presentative of the people, whose highest honor of being confidential advisers of the interests in the King's Councils they have King and his Representativ sin this Province, and however anxious to avert the It is therefore with pain your committee embarrassments has Excellency justly apnotice in the conclusion of His Excellen- prehended, yet having entered his Majes-

a: duty communicated them officially, they could not honorably retire from these principles, to which, as their representation testified, they properly attached so much importance and truth. Hence upon this delicate subject Mr. Baldwin nobly observes, (see his letter in the Appendix, marked C.

"Having in the representation alluded to but reiterated in a more formul manner in conjunction with my colleagues under the sanction of the oath, (which I had in the meantime taken) the same principles & opinions which his Excellency know me to entertain previous to his honoring me with a sent in his council; however desirous I might be of giving my best support to His Excellency's Government, or of not hasti-ly abandoning the important duties of my situation which had been most unwillingly assumed, I could not for a moment hesitate when the alternative presented to me was the abandonment either of my principles or my place."

Your Committee cannot hesitate to remark that this proposition of Sir Francis Head, in the secret council chamber, to retain them in his service, if they would retire from their principles, was highly objectionable, derogatory to the honor of the King, and demoralizing to the commun-

His Excellency against the late Council, "course not be deemed wise or admissible " by the Licutenant Governor, the Coun-".cil most respectfully pray that they may " be allowed to disabuse the public from " a misapprehension of the nature and ex-"tent of the duties confided to them."

This request might in the opinion of your committee, have been answered by a frank avowal of the alleged intention "after a few moments more afforded for reflection? to consult them to such an extent as to render their prayer "practically useless." But being in the strange misapprehension of His Excellency "sworn to be dumb," and thereby kept by him religiously mute ment. from giving him any advice; the late Council appear to your committee to have had before them only two courses, viz: either to obtain a more cordial and constitutional intercourse with His Excellency, or discreditably to keep up the prevailing public deception, respecting their duties. If grounds for the reiterated assertion of His the Council would have recanted and kept Excellency, that they wished to deprive

secrets, they might, as the reply shews, have dishonorably retained His Excellency's confidence.

But for what honest purpose could it be desired not to undeceive the public. who had so long, under a misapprehansion of the nature and duties of the Council, directed their reproach against them as the presumed concurrent advisers of misgovernment? If it is wrong that the Council should advise upon the "affairs of the Province," is it right falsely to make the people ascribe to them such duties?

Was it criminal, as is pretended, for them to ask leave to communicate to the public, not any particular matter, or their advice upon it, but merely to correct a public misapprehension of the nature and extent of the duties confided to them?— Was it generous or just for His Excellency, under pretence of the oath they, had taken, to compel the new Councillors to subject themselves unjustly to the same re proach, as had been heaped upon the old ones, for supposed acts they had never done, and for supposed advice which had never been asked or given? Was it mag-Among the criminating views urged by nanimous or honorable for a Lieutenant Governor, who professed to take upon since the date of the correspondence, will himself all responsibility for all mismabe found a complaint against their conclud nagement of our affairs, to screen himself ing prayer as follows, that "should such a from censure by allowing it to be unjustly imputed to a "dumb" "defenceless" Council? Would it not have been more manly to have said, "I am the only responsible person; you shall not be blamed for my acts; therefore disabuse the public that they may never charge against you what is wholly chargeable against me"? But on the contrary His Excellency condems them, almost as violators of their oath for desiring to undeceive the country, and for betraying so much sensitiveness about mere character and reputation, as to undervalue the honor of innocently braving all the odium of His Excellency's unadvised misdoings in his government. This is a species of political gal-lantry from which the Council seem humbly to have wished to be relieved; a wish, however, which His Excellency indignantly resents.

Your committee are unable to discover in the conduct of the late Council, any the great scoret, viz: that there were no him of his responsibility and patronage.

consist, in a great measure, of selecting good and rejecting their bad advice. advice of the Executive Council, given in responsibility of His Excellency. A Jury are not the less responsible for their verdict, because they hear evidence, the Counmay be said about the patronage." This to all public offices throughout the count subordinate kind. try; and as His Excellency professes himself to your Honorable Honse to be a stranger lately arrived among us, undequainted even with the political differences of the Mother Country, and, necessarily, (as all his successors from England must be) wholly ignorant of this Province, it seems ratiolad and prudent, that before making any such appointments to office, he should receive the advice of the Coun cil in conjunction with whom he could make better enquiries and arrive at safer conclusions, than by his own unaided judgment.

When, therefore, His Excellency contends that he will not take advice upon the affairs of the Province, because it takes away his responsibility, and that he will not consult the Coulier about appointments to office, because it will take away his patronage, it practically amounts to a de-claration, that he will carry on an arbitrary Government, not because it is the best calculated to advance the peace and prospetity of the country; but for the sellish purpose of displaying the extent of his power-for it is not pretended, that the Constitution prevents him from consulting with the Council on all matters, if he was only desirous of doing so:

But the Lieutenant Governor deliber His Majesty's government in Englandples of all preceding Governors, and ex-have been made.

The responsibility of the Governor, perionce, dearly bought, has proved that should, in the opinion of your Committee, liability to a patron in Downing Street; four thousand miles off, is unavailing for good Councillors, and acting with their any practical purpose And even as The suming this responsibility to continue, it! does not lessen the manifest expediency, the terms lately proposed by them, would and wisdom of guarding against even-uninform the judgement, but not impair the unintentional errors in the conduct of our affairs by the intervention of sworn advice from Councillors selected by: the Lieutenant Governor himself for their sel and the Judge. And to your Commit-talents and integrity. The counsel given: tee it seems puerile to urge, that should would produce here safe and happy govan Executive Council give advice to a erament, and instead of destroying respon-Lieutenant Governor, he could have no sibility in England, would only lessen the responsibility in acting on it. The same necessity of a frequent appeal to the: Throne and the British Parliament, for patronage chiefly consists of appointments the redress of grievances, even of the most

Your committee cannot forbear to notice? the Lieutenant Governor's charge against four of the late. Executive Councillors, whom he accuses with whaving changed their opinions: Sir Francis Head is those last person who should have promulgated such a reflection against any of the late servants, particularly against those to whom he had introduced gentlemen avowing the opinions, which, cit is insinuated; they imbibed. How could they supposes that His Excellency: was angriby opposed to the principles he had infused into the council? But it seems he formed the Council of persons who, he thought entertained opposite and discordant sentiments, and because, instead of quarrefling and wrangling among themselves they discovered in their proceeding, a happy and useful concording public business, he dismisses them for their unannity, and then ungraciously charges ione part with holding unconstitutional views, and the other part with being converts touthem? And all these attricks; are made upon them by His Excellency, who at the same time declares them to be defenceless because ... being sworn to silence, they are deprived ... by this fact, as well as by the constitution; of all power to defend themselves:" Nevertheless, to your Honorable House, and in: ately declares himself to be responsible answer to popular addresses, he is continue for his Conneil as well as for bunself to unly urging constructions and statements. against the Council, which ought in fair-This kind of responsibility (undenably ness (and on every principle of bottom) to existing) we have wrinessed in the example allowed to be answered or never to a

Your Committee feel surprised at the public answer of His Excellency to the address of the city corporation-your committee have procured a certified copy of this address and answer, from His Excellency's private secretary, which they hereunto annex; marked D.-in which he expresses "astonishment," that those principles "suddenly appeared from a quarter from which he certainly least expected it, from the Executive Council itself." It is but just to the late Council to remark, that the announcement of such principles from a Council into which His Excellency had himself knowingly introduced them with Mr. Baldwin and his coadjutors, could not, in candour, be a matter of "astonishment;" nor can your committee consider it done "suddenly" after an amicable verbal discussion with him in Council ten days before, or that it could be "certainly least expected" from sworn advisers known to him to entertain these principles, and bound by His Excellency's invitation to the frank interchange of opinions, as well as by every obligation of honor and duty, to express them to him, It is, therefore, plain that the principles are regarded with "astonishment," by His Excellency, when there was no reason to feel it; are denounced as obtruded by the late Council "suddenly," after they had been debated for weeks; are condemned as emanating from a "quarter" into which he had himself knowingly introduced them; and are said to have been "least expected" from men whom he had himself in Council sworn fearlessly to advise him according to their honest convictions.

The late Council are charged by His Excellency in the last mentioned document with resting their claims in the appended representation, very nearly on the following grounds:

"1st-That the responsibility they assume being "a popular one, daily increasing, is consequently the law of the land;" and "2ndly—That though "the powers they require are no where expressed in "the Constitutional Act, they were evidently intend-" ed to have been inserted."

ously at variance with candour as to defy any courteous commentary without injustice to the Constitutional question at issue.

In the answer of His Excellency, accompanying the documents between himself and the Council he states, that

"With every desire to consult my Council, I was preparing for their consideration important remedial measures, which I conceived it would be advisable to adopt, and had they but afforded me those few moments for reflection, which from my sudden arri-" val among you, I fancied I might fairly claim as my "due, the question which so unnecessarily they have "agitated, would have proved practically, to be use-'less.''

It is singular that this latent intention of

His Excellency is not even hinted in his reply to the Council, but is reserved for disclosure as a means of criminating them, after their resignation was effected by the alternative of "abandoning their principles; or their place." Considering the relation which ought to subsist between a Governor and the Executive Council of the Province, it was not, in the opinion of your committee, dealing ingenuously with them, to take most important steps without their advice or even knowledge;—and it must have been a humiliating position for gentlemen, distinguished as His Excellency admits, for "their talents and integrity," to imagine that His Excellency was "preparing important remedial measures," not in dignified and constitutional co-operation with his highly gifted Council, but by the aid of unsworn and irresponsible persons unentitled to confidence. Such conduct did not redeem the pledge of the late Council, upon accepting office, of his "implicit confidence;" and when, after three weeks merely nominal Councillorship, they resign, it is alleged "had they afforded him n few moments for reflection, the question: which so unnecessarily they have agit ated would have proved practically useless. If such is the truth, if it was intended (after a few moments for reflection,) to consult. the late Council to such an extent as to render their representation "practically useless," why did His, Excellency require Your Committee have compared the them to "abandon their principles or their above professed epitome of the grounds place?" Why did he in his owndanguago taken by the late Council, with the represent drag the question into day-light in order sentation itself, from which it is avowedly that it might be openly, fairly and constideduced; and the grounds, thus charged tutionally discussed;" when it was his by His Excellency against the Council as avowed intention, shortly to render the agiassumed by them, are so utterly & so obvi- tation of it "practically useless?"

to fill the country with consternation and dismay, upon a matter respecting which, he had the power and professes to have had the intention, to satisfy public expectation; and after importuning the Honorable J. H. Dunn and R. Baldwin, Esq., under an overwhelming pressure of recent domestic affliction, and Doctor Rolph amidst professional avocations, in voluntary retirement from public life, to join the Council, in order to aid the King's Government, it was most ungenerous to almost expel them his which, after a few moments more reflection, he intended so far to follow as to render their representation " practically use-

It should be particularly observed, that the representation of the late Council was signed by all the Councillors; was the deliberate, unanimous conscientious opinion of gentlemen of different political parties, of those who had long been in office and of those who had just been appointed -not us to a mere theoretical question, but as to a question practically affecting their own duties, under the constitution of Council, not by any factious or party prothe country; was not a movement to serve any political party, but was calculated to meet the views and wishes of all parties; and that being in writing, His Excellency could take his own time to consider it. Finally, as this was a matter of no ordina-the corporation as follows: ry importance and as the Councillors had delivered their views in writing signed by all, (a proper and constitutional proceed- but I DETERMINED the very first time it should ing on such great questions in the judg- come well within my reach that I would DRAG it ment of the committee, and certainly the "into day-light." &c. most respectful to His Excellency,) it would have been no great stretch of courtesy to the unanimous and confidential tained the public censures for the misconadvice of his Councillors, if, in case he differed from them, he had referred it, with his observations, to His Majesty's government, instead of indulging his arbitrary their sentiments. It may be observed that ally with respect ciple maintained by him, or to compromand information, which would have been assume it himself. The representation of

such a prospect it was inexcusable MISRULE | highly useful to him and which, in fact, he necessarily must seek somewhere. By this means, he would have prevented the present excitement, and the discussion which has been forced upon the country of forms of Government and fundamental principles of the Constitution; a discussion which common prudence will admonish all settled governments to avoid. That he might have consulted them upon-all the affairs of the Province even if he was not obliged to do it, there can be no doubt. Such a course if not enjoined is Council, merely for offering a suggestion evidently not forbidden by the Constitution, or by the Royal Instructions, or by any law or authority whatever. It is not borrowed from a republican government or republican institutions, but is a British usage and according to British principles. It seems however from his own declaration that he was waiting for an opportunity to force this discussion upon the country; or in his own language "to drag this new theory into day-light," in order that it might be discussed. The Committee and the House are therefore "dragged" into the discussion of it, not by the Executive ceeding, but by His Excellency himself, who, it appears, notwithstanding his short arrival in the country, rather courted the discussion of it than otherwise, for it will be observed that he stated in answer to

"Finding that this new theory was rapidly gaining. " ground, I resolved to offer it no secret opposition, " nor in any way to exert my influence to oppose it,

The committee cannot but remark that hitherto the Executive Council have susduct of our affairs upon which it has always been supposed they have given a concurrent advice .- and upon that account past Lieutenant Governors as well as the spirit and requiring them to resign for the British Government have sustained their mere expression to him in confidence of office in dignity and been treated person-It is therefore, with without being obliged to concede the prin-great concern we learn from various public documents emanating from His Excellenise his character or his dignity, he might cy upon this subject, that he desires to frankly have consulted them, in the mean relieve the council from all participation time. of his own accord, on all important of popular displeasure, inevitable in a matters, and have obtained thereby advice country with liberal institutions, and to

the late council fully expresses the odi- as such Governor, Lieutenant Governor cil, had been charged, as His Excel- occasions, are propositions which are decome weakened or destroyed.

In the conclusions of the late Executive Councillors, the committee fully concur, and cannot but express their surprise, that His Excellency should not be convinced by the clear and unanswerable arguhim. His Excellency, however, in one of his appeals to popular feeling, broadly declares that the Act of 31 Geo. 3, chap 31, creates no Executive Council, and says, act for yourselves."

In humble imitation of this great authosuch passages as this; [section 7.] "be-Indeed it has been a universal belief; foun-

um which its members had silently endur- or person administering the Government ed, and it appears to your committee repagnant to the British constitution and inconsistent with the necessary preservation of respect for the Kingly office to bring his representative into personal collision with the people in every period of excitement, and render him the ostensible per- in the communication which seems to have som for accusation and complaint. Should disturbed his Excellency so much, amidst such a doctrine prevail, the royal station his alleged preparation of "important rein the colony will be soriously impair medial measures," and conclude, that aced in its dignity and be almost unavoidably cording to the constitutional Act, there
introduced in parliamentary debate, and must be an Executive Council: that they become the point upon which will be contact are appointed by the King, and that they centrated every manifestation of popular are appointed to advise upon the affairs of indignation. If all the odium which has this Province, generally, and not merely been poured upon the old Executive Coun- upon particular affairs or upon particular lency proposes, upon the Lieutenant Go monstrable from the express terms, as well vernors, their residence would not be to as from the spirit and evident intention of lerable, and their very authority would be that act; (as has been shewn by the late Executive Councillors) and may moreover, be inferred from the absence of every thing of a contrary import in the statute:

In other statutes besides that just referred to both Imperial Statutes & Provincial ment contained in their representation to Statutes, the Executive Council is noticed; and their duties are alluded to in terms equally comprehensive.—[See the Provincial Statute 31 Geo. 3, chap. 2, sec. 33 and the British Statutes 6 Geo. 4, chap. "if any one tells you that it does, read the 114, sec. 30—and 7th and 8th Geo. 4, chap 62, sec. 1.] From these statutes it will be In humble imitation of this great authority, we affirm confidently, that according to that statute there must be an Executive the affairs thereof," and not His Excellency's council appointed by the King, for the affairs thereof, and not His Excellency's council, or appointed for particular affairs or any particular purpose. They are not, as he says they are, appointed to lency to doubt it, we say "read the act serve him; they are the Council of the for ourselves," especially such passages as this section 34 "together with such Province." The distinction of His Excel-Executive council as shall be appointed by lency between the council serving him His Majesty for the affairs of such Province and not the people, is calculated to awa-and such passages as this [section 39]— ken much concern, and seriously impair "with the advice of such Executive Coun- that identity of interest and purpose which cil as shall have been appointed by His (under the presumption of our enjoying the Majesty, his heirs or successors, within British Constitution) we always supposed such Province for the affairs thereof; "& to exist between the King and the People" fore: such Executive Council as shall have ded as your committee believes in unering been appointed by his Majesty, his heirs principles, that both the Privy Council at or successors within such province for the Home, and the Executive council in this affairs thereof;" and such passages as this, Province, are the servants of, or instruing interests between the King and the the Provincial Legislature, the Lieutenant People, by creating a belief that in serving the crown they do not serve the country, is erroneous in theory and mischiev-

ous in practice.

His Excellency repeatedly asserts that no Executive Council was created by the British Act 31st Geo. 3d. chap. 31, and most liberal construction which can possibly be put upon the said Act only amounts to this That as an Executive Council was evidently intended to exist, the remnant of the old one ought not to be deemed totally extinct until its successor was appointed.

In opposition to this sweeping and positive declaration, the committee must remark, that there was no such thing as "an old council" of this Province, and though there had been a council created for the affairs of the old Province of Quebec, by the British Act 14th Geo. 3, chap. 83, this council was called a Legislative Council, and not an Executive Council; and your committee also deem it worthy of remark, that this council is spoken of at the same time in the said 14th Geo. 3, as in the Executive council of this Province in the 31st of the King, viz: "a council for the affairs of the Province of Quebec;" and moreover, the very first clause of the 31st Geo. 3, chap. 31, repealed so much of the previous act as in any manner related to the appointment of that Legislative Council; or to administer the government of this Proto the power given to them. Not" a remnant" of that old Council therefore existed. Every vestige of it was annihilated, and your committee are quite perplexed to understand how the Legislative Council of vince, would do well to consider upon Quebec after its absolute & unconditional what law his own authority rests, before he repeal could survive in even a remnant (as makes these rash assertions. The official His Excellency says) 'till its successor character and authority of a Lientenant was appointed:—if this is good reason- Governor, are no more necessary under was appointed:—if this is good reason-Governor, are no more necessary under ing on the part of His Excellency, the Legislative council of Quebec (had no sucprovides that during the interval, between letter to be substracted " " " " common commit-

ments for the dispensing of good govern-ment; any attempt to put up any conflict-the Province, and the first meeting of Governor, " with the consent of the major part of such Executive Council as shall be appointed for the affairs of the Province, may make laws for the government thereof in the same manner as the old Legislative Council for the affairs of the Province of Quebec, could have made ordinances and says, "as regards even its existence the laws for that Province. The Council thus authorised to assist in making laws, were an Executive Council not then appointed, but which were to be appointed, and were to be appointed before the first meeting of the Provincial Parliament; and were to be appointed, not for that particular purpose only, but "for the affairs of the Province" And yet, according to His generally. Excellency's opinion, this statute did not establish an Executive Council at all!-While in his reply to the late Council, he says, "To enable the Lieutenant Governor to perform the arduous duties of his office, the Constitution has wisely provided him with an Executive Council competent to supply him with that local knowledge in which he may be deficient, and to whom he may apply for counsel and advice."

The committee, without liesitation, affirm, that this Act as much creates or requires the appointment of an Executive Council, for the affairs of the Province, as it creates or requires the appointment of a Governor, Lieutenant Governor, or person vince. His Excellency, when he is promulgating and defending the novel doctrine, that he is the sole Minister as well as Representative of the King in this Prothan is an Executive Council for the affairs cessor been appointed] would be now in of the Province; and if the Representative operation, and by similar logic, by res- of the King can thus attempt by such bold cinding the instructions. His Excellency assertions, upon such slight grounds, to exmight undertake to revive it. But the last plain away an important part of that law, clause of the 31st Geo. 3, chap 31, affords which is the i great charter of our liberaconclusive answer to all His Excellenties," (from which His Excellency himself, cy's assertions that an Executive Coun- in one of his appeals to the people, tells cil was not created by that Act; for it them they "should never allow a single

they have received, duly certified by his Private Secretary, marked E); your committee can only hope that his example will have as little weight as his arguments.

It was in a very different spirit and with very different views from Sir Francis Bond Head, that Lieutenant Governor Simcoe regarded this great charter of our liber-That great and good man, whose memory is embalmed in the affections and gratitude of the people of this Province, was a member of the British Parliament when our Constitutional Act was passed, and having served with distinguished honor in the Colonies, during the war which had not long before terminated, and having been acquainted with those brave and loyal people, who were about to seek in this Province an asylum under British Laws and British Institutions, he was no doubt, freely consulted about the form of Government to be given to them.

The following extract from Lord Rawdon's observations in the House of Lords in the discussion on the passage of the 31st of the King, will give an idea of the estimation in which Governor Simcoe was held.

"His Lordship said, that the gentleman, whom he had heard was to be honored with the appointment of Governor, was one, of all others, the fittest and most to be wished for by the country. His intelliger: mind his generous and liberal manners, his active spira, and peculiar abilities for that situation, rendered bim, in an eminent degree, the properest person that Ministers could have selected for that appointment; and certain he was, that the choice would redound to their honor and credit." Graphia Char

"If Canada was to be governed under the present bill, it would be well for this country and well for Canada, that Colonel Simcoe was the Governor.

When the British Nation conceded to the United States, the right of forming a free government for themselves, after their own choice, it is scarcely credible, that they intended to confer a Constitution, less acceptable, upon the Loyalists, who had fought, bled, and sacrificed their property and liomes in defence of the Unity of the Empire. And it does seem humiliating to Representative, from the Throne, in your committee, after the lapse of hulf'a century, to find a new Lieutenant Governor drawing so unfavorable a contrast between Arthis juncture I particularly recommend to you our local institutions and those from which to explain, that this Province is singularly blest, not the functions of that important branch of Britain:"

which, has stood the test of experience, and is the functions of that important branch of Britain:"

tee append the address and answer, which the Constitution, called the Executive Council.

The government of this? Province was in fact the subject of one of the most interesting and memorable debates ever witnessed in the British Parliament; and while Mr. Fox urged the extension of the elective principles in the new constitution further than it existed in the British constitution, motone proposed that the form of government should be less popular or less free. Governor Simcoe heard the debates on this subject, and in fact, took part in them. He was the bearer of the Act to this country—was the first Lieutenant Governor of the Province, and was well qualified, and appears to liave been authorised by His Majesty's government, to explain to the people the new constitution which was established for their benefit. This enlightened British Statesman and Legislator, who certainly knew what the principles of the British constitution were, on the very opening of the first. Session of the first Provincial Parliament, addressed the Legislature from the Throne, and in the King's name, in the following terms:

"I have summoned you together under the author-"ity of an Act of the Parliament of Great Britain, passed last your, which has established the British "Constitution, and all the forms which secure and "maintain it in this distant country."

The wisdom and beneficence of our most Gracious "Sovereign and the British Parliament, have been meminently proved, not only in imparting to us the " same Form of government but also in securing the benefit, by the many provisions that guard this memorable Act; so that the blessings of our invaluable Constitution, thus protected and amplified, we may hope, will be extended to the remotest pos-

The great and momentous trusts and duties, which "have been committed to the Representatives of this "Province, in a degree infinitely beyond whatever till " this period have distinguished any other Colony, have "originated from the British Nation upon ajust consid-" eration of the energy and hazard with which its inhabitants have so conspicuously, supported and de-" fended the British Constitution.

Still more striking was the following language used by him, as the King's the speech with which the closed that Session:

with a mutilated Constitution, but with a Constitution reserved paragraph and project technology where
