This market guide booklet has been prepared with the problems inherent to the initiating exporter in mind. However it is not exhaustive; individual circumstances, interest and needs will dictate how companies should tailor their approach and strategy to the Mexican market. While every attempt has been made to ensure accuracy in this study, no responsibility can be accepted for errors or omissions.

Further assistance can be obtained by addressing requests directly to the Commercial Division of the Canadian Embassy in Mexico City located at Calle Schiller No. 529, Colonia Polanco, 11560 México, D.F. Telephone 254-32-88, telex 177 1191 and fax (sending from Canada) 011 (525) 545-17-69; or the Latin American Division Department of External Affairs, Industry Science and Technology Canada, 125 Sussex Drive, Ottawa, Ontario K1A 0G2, Phone 9950460 Fax (613) 996-06-77.

1. BACKGROUND

Forestry has an old tradition in Mexico. Ever since before the Spanish conquest of Mexico, the indian population relied on Mexico's vast forests for its food, protection and clothing needs. During the 16th century, the first regulatory measures were taken to avoid the destruction of forests, including limitations on wood cutting and primitive reforestation measures. During the 17th century, the exploitation of mahogany, cedar and oak was reserved to the Spanish crown, although British and Dutch invasions of tropical forests were not uncommon.

The massive destruction of Mexico's forests began with the flourishing mining industry, led by the Spanish conquerors. The mines themselves were built and reinforced with wood structures, the transformation of the primary product into metals was fueled with wood and the indigenous population, deprived of their lands, increasingly moved into the wooded areas, deforesting them to grow their crops.

Under the new post-independence regime, a series of regulatory measures were taken to protect the forests and to control the production of wood products. During the 19th century, the exploitation of fine woods was subject to a prior permit requirement, the free importation of wood was allowed to avoid the excessive exploitation of local forests, the first inventory of existing resources was made, the cutting and conservation of forests was regulated and national parks were created to protect both the vegetation and the animal life.

Further efforts have been made in the 20th century to regulate the excessive exploitation of forests and to preserve existing resources. In 1926, the First Forestry Law was passed by President Plutarco Elías Calles, in an effort to officially rationalize the exploitation of Mexican forests. This law was reformed in 1942 and again during the administration of President Miguel Alemán (1945-1950). In 1960, President Adolfo López Mateos authorized a new forestry law to meet the requirements of the times. More recently, in April 1986, a new Forestry Law came into effect, followed, in July 1988, by the Regulations to the Forestry Law.

Although the forests of Mexico have been commercially exploited during the last 70 years, the industry is still considered in its infancy with respect to exploitation and use of up-to-date technology. Despite the country's rich forestry resources, low yields and insecurity on investment have often made imports of lumber and cellulose easier and cheaper than local production. At the same time, deforestation is progressing at a fast pace, at the margin of existing regulations.

The National Development Plan, which outlines President Salinas de Gortari's 1989-1994 policy, calls for an increased supply of forestry products in order to cover domestic demand within the framework of ecological balance. This implies the reforestation of damaged areas and the thorough application of existing regulations. It also calls for the modernization of the forestry related industry, the creation of new road infrastructure to reach the forests, the preparation of a new inventory of existing resources and the decentralization of technical services.

The forestry sector has the potential of becoming an important contributor to the nation's economy. It will require considerable financial and technical assistance to improve efficiency in silviculture, public and private resource administration and in the manufacture and marketing of its wood products. This will translate into increased opportunities for Canadian firms in the industry.

1. BACKGROUND

Forestry has an old tradition in Mexico. Ever since before the Spanish conquest of Mexico, the Indian population relied on Mexico's vast forests for its food, protection and clothing needs. During the 16th century, the first regulatory measures were taken to avoid the destruction of forests, including limitations on wood cutting and primitive reforestation measures. During the 17th century, the exploitation of mahogany, cedar and oak was reserved to the Spanish crown, although British and Dutch invasions of tropical forests were not uncommon.

The massive destruction of Mexico's forests began with the flourishing mining industry, led by the Spanish conquerors. The mines themselves were built and reinforced with wood structures, the transformation of the primary product into metals was fueled with wood and the indigenous population, deprived of their lands, increasingly moved into the wooded areas, detaching them to grow their crops.

Under the new post-independence regime, a series of regulatory measures were taken to protect the forests and to control the production of wood products. During the 18th century, the exploitation of the woods was subject to a prior permit requirement, the free importation of wood was allowed to avoid the excessive exploitation of local forests, the first inventory of existing resources was made, the cutting and conservation of forests was regulated and national parks were created to protect both the vegetation and the animal life.

Further efforts have been made in the 20th century to regulate the excessive exploitation of forests and to preserve existing resources. In 1926, the First Forestry Law was passed by President Plutarco Elias Calles, in an effort to officially restrict the exploitation of Mexican forests. This law was reformulated in 1945 and again during the administration of President Miguel Alemán (1946-1950), in 1980, President Adolfo López Mateos authorized a new forestry law to meet the requirements of the times. More recently, in April 1985, a new Forestry Law came into effect, followed in July 1988 by the Regulations to the Forestry Law.

Although the forests of Mexico have been commercially exploited during the last 70 years, the industry is still considered in its infancy with respect to exploitation and use of up-to-date technology. Despite the country's rich forestry resources, low yields and scarcity of investment have often made reports of lumber and cellulose easier and cheaper than local production. At the same time, deforestation is progressing at a fast pace, at the margin of existing regulations.

The National Development Plan, which outlines President Salinas de Gortari's 1988-1994 policy, calls for an increased supply of forestry products in order to cover domestic demand within the framework of ecological balance. This includes the reforestation of damaged areas and the thorough application of existing regulations. It also calls for the modernization of the forestry-related industry, the creation of new road infrastructure to reach the forests, the preparation of a new inventory of existing resources and the decentralization of technical services.

The forestry sector has the potential of becoming an important contributor to the nation's economy. It will require considerable financial and technical assistance to improve efficiency in silviculture, public and private resource administration and in the manufacture and marketing of its wood products. This will translate into increased opportunities for Canadian firms in the industry.

2. ECONOMIC ENVIRONMENT

Over the past two years, Mexican economic policy has featured a tough anti-inflationary program called the Economic Solidarity Pact, combining traditional austerity measures (tight fiscal and monetary policies) and unorthodox measures (price, wage and exchange rate controls). The program has been successful in reducing inflation, from an annual 159.2% in 1987 to 51.7% in 1988 and 19.7% in 1989. An 18% rate is expected for 1990. The general criteria for Mexico's macroeconomic policy in 1990, are to consolidate and fortify the progress made in price stabilization, to reaffirm gradual and sustained economic recuperation, to increase investment, both national and foreign, and to improve living standards.

Mexico's gross domestic product (GDP), after increasing 3.7% and 2.7% during 1984 and 1985 respectively, diminished by 3.5% in 1986. In 1987, it increased a moderate 1.5% and an additional 1.1% in 1988. Domestic economic activity recovered for the third consecutive year in 1989 with an estimated growth rate of 3.0% to reach \$200 billion (1). With an 84.5 million population, per capita GDP is estimated at Cdn\$2,550. During the 1990-1994 period GDP is expected to maintain an average annual growth rate of 2%-3%.

In an effort to revitalize and open the Mexican economy, the Mexican Government undertook a series of structural changes, including the accession to the General Agreement on Tariffs and Trade (GATT) on August 24, 1986 leading to an extensive trade liberalization process: import permits were eliminated on all but 325 of the total 11,950 tariff items based on the Harmonized System adopted as of July 1, 1988. Official import prices are no longer applicable, nor the 5% export development tax, and import duties were lowered from a maximum of 100% in 1982 to 20% in 1988. The automotive and computer industries are also being opened up to allow free entry.

According to official data from the Mexican Secretariat of Commerce and Industrial Development (SECOFI), Mexico's trade balance in 1989 dropped to a \$644.8 million deficit, down from a surplus of \$1.75 billion in 1988 and \$8.4 billion in 1987. Total exports increased 10.7% in 1989, from \$20.6 billion in 1988 to \$22.8 billion. Imports increased 23.9% from \$18.9 billion to \$23.4 billion, having already increased 48% from \$12.2 billion in 1988. During 1989, imports of consumer products grew 82%, while those of intermediate goods increased by 17% and capital goods by 18%.

Total Mexican imports from Canada increased 24% in 1989 and amounted to Cdn\$603 million, while total Mexican exports to Canada were valued at Cdn\$1,698 million. Mexico and Canada have traditionally been strong trading partners. According to Mexican figures, in 1989, 1.9% of Mexico's imports came from Canada, while 1.2% of its exports were to Canada. This makes Canada Mexico's fifth largest exporter and sixth largest importer.

1. NOTE: All values in this report, unless otherwise stated (\$ Mexican pesos, Canadian dollars Cdn\$, etc.) are quoted in United States dollar equivalents.

2. ECONOMIC ENVIRONMENT

Over the past two years, Mexican economic policy has featured a tough anti-inflationary program called the Economic Solidarity Pact, combining traditional austerity measures (tight fiscal and monetary policies) and unorthodox measures (price, wage and exchange rate controls). The program has been successful in reducing inflation from an annual 18.2% in 1987 to 5.7% in 1988 and 19.7% in 1989. An 18% rate is expected for 1990. The general criteria for Mexico's macroeconomic policy in 1990 are to consolidate and finally the progress made in price stabilization, to reaffirm gradual and sustained economic reorganization, to increase investment, both national and foreign, and to improve living standards.

Mexico's gross domestic product (GDP) after increasing 5.7% and 2.7% during 1984 and 1985 respectively, diminished by 2.5% in 1986. In 1987, it increased a moderate 1.5% and an additional 1.1% in 1988. Domestic economic activity recovered for the third consecutive year in 1989 with an estimated growth rate of 3.0% to reach \$200 billion (-). With an 84.8 million population per capita GDP is estimated at Cdn\$2,580. During the 1980-1994 period GDP is expected to maintain an average annual growth rate of 2.7-3.7%.

In an effort to revitalize and open the Mexican economy, the Mexican Government undertook a series of structural changes, including the accession to the General Agreement on Tariffs and Trade (GATT) on August 24, 1986 leading to an extensive trade liberalization process. Import barriers were eliminated on all but 62% of the total 11,900 tariff lines based on the Harmonized System adopted as of July 1, 1988. Official import prices are no longer applicable, nor the 6% export development tax and import duties were lowered from a maximum of 100% in 1983 to 20% in 1988. The automotive and computer industries are also being opened up to allow free entry.

According to official data from the Mexican Secretariat of Commerce and Industrial Development (SECOFI) Mexico's trade balance in 1989 dropped to a \$44.8 million deficit, down from a surplus of \$1.75 billion in 1988 and \$8.4 billion in 1987. Total exports increased 10.7% in 1989, from \$20.9 billion in 1988 to \$22.8 billion. Imports increased \$3.9% from \$18.9 billion to \$22.8 billion, having steady increase 4.8% from \$12.2 billion in 1988. During 1989, imports of consumer products grew 8.2%, while those of intermediate goods increased by 17% and capital goods by 18%.

Total Mexican imports from Canada increased 5% in 1989 and amounted to Cdn\$2,503 million, while total Mexican exports to Canada were valued at Cdn\$1,688 million. Mexico and Canada have traditionally been strong trading partners. According to Mexican figures, in 1988, 1.9% of Mexico's exports came from Canada, while 1.2% of its exports were to Canada. This makes Canada Mexico's fifth largest exporter and sixth largest importer.

1. NOTE: All values in this report, unless otherwise stated, in Mexican pesos.
Canadian dollar (Cdn, etc.) are quoted in United States dollar equivalents.

3. MARKET ASSESSMENT

The Mexican market for forestry harvesting and woodworking equipment increased 83% in 1988, to \$41.6 million. This growth was brought about by a major surge in imports, which increased 118%, from \$15.9 million in 1987 to \$34.8 million in 1988. Two factors accounted for this growth: the general economic improvement together with the fact that the exchange rate between the dollar and the peso remained fixed during that year, despite the existing inflation, and after a major devaluation; and the general liberalization of trade conditions, which allowed for easier and cheaper imports. Imports increased to \$36.1 million in 1989, or 3.7% above 1988 levels, while the total market increased 3.4%, to \$43 million.

This market is expected to experience a moderate growth rate during the next five years, since no major investments have been identified up to date in this sector. The industry has been operating with old and outdated machinery and has started to substitute it for newer equipment as economic conditions have improved and imports have been facilitated. An important factor has also been the gradual reduction in interest rates with the decrease in inflation, as well as the availability of financial resources for equipment purchases, which was practically non-existent before 1989. This trend is expected to continue in the years to come. By 1994, the total market is expected to reach \$54.9 million after an average annual growth of 5%.

Imports have played a major role in this industry, since the bulk of forestry harvesting and woodworking equipment is not manufactured in Mexico. Local production is limited to the most simple tools, including saws, hand tools, motors, edge cutters and parts and accessories. All of the larger and more sophisticated equipment is imported, including circular saws, chain saws, plywood presses, particle board manufacturing equipment, boilers and dryers for wood or cellulose, hoists, winches and cranes, planes and cutting tools for working wood, machine tools for working wood, such as sawing machines, planing, milling or cutting machines, sanding or polishing machines, drilling, splitting, defibrating machines, bark stripping machines and lathes.

3. MARKET ASSESSMENT

The Mexican market for forestry harvesting and woodworking equipment increased 83% in 1988, to \$41.8 million. This growth was brought about by a major surge in imports, which increased 118%, from \$15.9 million in 1987 to \$34.5 million in 1988. Two factors accounted for this growth: the general economic improvement together with the fact that the exchange rate between the dollar and the peso remained fixed during that year, despite the existing inflation, and after a major devaluation; and the general liberalization of trade conditions, which allowed for easier and cheaper imports. Imports increased to \$36.1 million in 1988, or 2.7% above 1988 levels, while the total market increased 3.4% to \$43 million.

This market is expected to experience a moderate growth rate during the next five years, since no major investments have been identified up to date in this sector. The industry has been operating with old and outdated machinery and has started to substitute it for newer equipment as economic conditions have improved and imports have been facilitated. An important factor has also been the gradual reduction in interest rates with the decrease in inflation, as well as the availability of financial resources for equipment purchases, which was practically non-existent before 1988. This trend is expected to continue in the years to come. By 1994, the total market is expected to reach \$54.5 million after an average annual growth of 6%.

Boilers and driers	1,292	2,882	2,748
Hoists and cranes	2,990	6,387	2,420
TOTAL	15,901	34,760	36,056

Source: Data by Secretaría de Comercio y Fomento Industrial

Imports accounted for 70% of the total market in 1987 but increased their participation to 83% in 1988 and 84% in 1989. Imports will continue to dominate the market, mostly because existing demand does not justify the local production of these items at such a small scale and therefore the prices of imported equipment are more competitive than those of locally manufactured products, if available. Used machinery and equipment is also in high demand in Mexico, since state-of-the-art technology is still not frequently used and is limited to the very large firms.

The most important supplier of forestry harvesting and woodworking equipment to Mexico is the U.S., with a 58% market share. Geographical proximity plays a major role in this leadership, since transportation costs can be high. At the same time, spare parts and accessories are therefore more readily available. Also, many U.S. firms have established a presence in Mexico through local distributors, representatives or agents or through joint ventures. Italy and West Germany also have a major presence in Mexico with a 9.3% and 8.1% market share respectively. Brazil, Sweden and Japan have a smaller share of the market, while Canadian products account for one percent of total imports.

TABLE 2
MEXICAN IMPORTS OF FORESTRY AND
WOODWORKING EQUIPMENT
(000 U.S. dollars)

	1988	1987	1986

Source: Statistics Canada - International Trade Division

According to official Canadian data, Canadian exports to Mexico increased 52%, from Cdn\$326,000 in 1988 to Cdn\$495,000 in 1989. The largest categories are saws and saw blades (48%), woodworking equipment (35%) and materials handling equipment (16%). Canadian imports from Mexico were Cdn\$2.8 million in 1988 and Cdn\$1.3 million in 1989, consisting mostly of hand saws and other motor driven hand tools and boilers.

4. THE MEXICAN FORESTRY SECTOR

4.1 RESOURCES

Mexico's forestry sector, comprising wood and wood products, accounted for 1.9% of the country's total GDP and 3.4% of manufacturing GDP in 1989, equivalent to Mex\$36.2 billion 1980 pesos (or roughly \$1.6 billion). During the 1981-1989 period, this sector decreased at an average annual rate of 1.75%, as compared to a 0.45% annual increase of manufacturing GDP as a whole. Although during the 1981-1986 period the forestry sector followed the general trend of manufacturing GDP, between 1987 and 1989 the latter has experienced moderate growth rates, while the forestry sector has shown a continuing decline.

Mexico's total forested areas represent 144 million hectares, or 73% of the country's total territory. This places Mexico among the 11 countries in the world with the largest forestry resources. Approximately 12 million people live in forested areas and an estimated 300,000 live off primary forestry production.

Source: Statistics Canada - International Trade Division

According to official Canadian data, Canadian exports to Mexico increased 52% from Cdn\$28,000 in 1985 to Cdn\$182,000 in 1988. The largest categories are saws and saw blades (48%), woodworking equipment (32%) and metals handling equipment (15%). Canadian imports from Mexico were Cdn\$8.8 million in 1988 and Cdn\$1.3 million in 1985, consisting mostly of hand saws and other motor driven hand tools and bolts.

4 THE MEXICAN FORESTRY SECTOR

4.1 RESOURCES

Mexico's forestry sector, comprising wood and wood products, accounted for 1.8% of the country's total GDP and 3.4% of manufacturing GDP in 1989, equivalent to Mex\$2.2 billion (1980 pesos for roughly \$1.8 billion). During the 1981-1989 period, this sector decreased at an average annual rate of 1.75%, as compared to a 0.45% annual increase of manufacturing GDP as a whole. Although during the 1981-1989 period the forestry sector followed the general trend of manufacturing GDP, between 1987 and 1989 the latter has experienced moderate growth rates, while the forestry sector has shown a continuing decline.

Mexico's total forested areas represent 144 million hectares, or 73% of the country's total territory. This places Mexico among the 11 countries in the world with the largest forestry resources. Approximately 12 million people live in forested areas and an estimated 300,000 live off primary forestry production.

Mexico's total forested area can be further subdivided as follows:

TABLE 4
MEXICO'S FORESTED AREAS
(million ha./% of total territory)

REGION	FORESTS	JUNGLES	INTERFLUSH	TOTAL
I	4,512	11	5,428	9,951

Forests of temperate and cold climates, covering 27.5 million ha. with a log production potential of two billion cubic meters are found (see Map II):

- 48.2% in the Western Sierra Madre
- 20.8% in the neo-volcanic sierra
- 15.6% in the Southern Sierra Madre
- 9.0% in the Eastern Sierra Madre
- 5.1% in the Sierra of Chiapas
- 1.3% in the Baja California peninsula

Forests of tropical and semitropical climates cover 11.4 million ha with a potential log production of 1.1 billion m³ and are found (see Map II):

- 72.5% in the Southeast
- 8.9% along the coasts of the Gulf of Mexico
- 18.6% along the Pacific litoral

Source: Memoria Económica 1959-1960
 Cámara Nacional de la Industria Forestal

Forests of temperate and cold climates, covering 27.5 million ha., with a log production potential of two billion cubic meters are found (see Map 1):

in the Baja California peninsula	1.3%
in the States of Chiapas	2.7%
in the Eastern Sierra Madre	9.9%
in the Southern Sierra Madre	12.8%
in the neo-volcanic areas	20.8%
in the Western Sierra Madre	48.2%

Forests of tropical and semitropical climates cover 11.4 million ha. with a potential log production of 1.1 billion m³ and are found (see Map 2):

along the Pacific littoral	18.8%
along the coasts of the Gulf of Mexico	8.9%
in the Southeast	76.5%

4.2 PRODUCTION

The exploitation of Mexico's forests is subject to a prior authorization granted by the Secretariat of Agriculture and Hydraulic Resources (Secretaría de Agricultura y Recursos Hidráulicos - SARH) for the specific exploitation of certain areas and varieties. During 1989, a total of 4,313 authorizations were granted. The following table lists authorized volumes by species and actual production:

SPECIES	AUTHORIZED VOLUME 000 m3 logs	PRODUCTION VOLUME 000 m3 logs
Pine	10,823	7,462
Other conifers	611	311
Oak	3,208	438
Other leafed species	330	170
Precious	127	74
Tropical	794	433
TOTAL	15,893	8,888

The vast majority of forestry resources, estimated at 80%, are in the hands of ejidos or community properties, which are officially assigned by the Secretariat of Agricultural Reform (Secretaría de la Reforma Agraria - SRA). The remaining 15% is held by small proprietors and the state. This structure of land holdings was mostly intended to distribute the land to a large number of families for agricultural purposes or eventually for cattle raising, both of which are basically short term activities. This has created a strong competition to forestry, which has a long term yield and requires large and long term investments. Additionally, agreements for the concession of land for the exploitation of forestry resources are only valid for one year (as opposed to 20 years before President Echeverría). This has made investment in the sector riskier and long term exploitation and reforestation more difficult. Other structural problems the local industry has to face are the high transportation costs since, due to lack of rivers, wood has to be hauled over land on trucks, mostly on small mountain roads which do not allow massive transportation. This factor significantly increases exploitation costs and makes competition with imported products difficult.

Mexico's total production of timber products, in thousands of m3 logs, between 1985 and 1989 was as follows:

PRODUCT	1985	1986	1987	1988	1989
Scantling (1)	6,082	5,508	6,137	5,840	5,807
Pulp	2,864	2,410	2,664	2,591	2,349
Posts & piles	237	173	149	164	156
Fuel	484	454	492	495	443
Sleepers	279	413	349	224	133
TOTAL	9,946	8,958	9,791	9,314	8,888

Note: (1) includes boards, packaging wood, carved wood, wood for veneer, wood waste, pieces for sawmills and veneer and other log products.

4.2 PRODUCTION

The exploitation of Mexico's forests is subject to a prior authorization granted by the Secretariat of Agriculture and Hydraulic Resources (Secretaría de Agricultura y Recursos Hidráulicos - SARH) for the specific exploitation of certain areas and varieties. During 1988, a total of 4,313 authorizations were granted. The following table lists authorized volumes by species and actual production:

SPECIES	AUTHORIZED VOLUME 000 m ³ logs	PRODUCTION VOLUME 000 m ³ logs
Pinus	10,823	7,462
Other conifers	811	311
Oak	3,208	438
Other leafed species	330	170
Precious	127	74
Tropical	784	433
TOTAL	18,993	8,888

The vast majority of forestry resources, estimated at 80%, are in the hands of ejidos or community properties, which are officially assigned by the Secretariat of Agriculture and Hydraulic Resources (Secretaría de Agricultura y Recursos Hidráulicos - SARH). The remaining 20% is held by small proprietors and the state. The structure of land holdings was mostly intended to distribute the land to a large number of families for agricultural purposes or eventually for cattle raising, both of which are basically short term activities. This has created a strong competition to forestry, which has a long term yield and requires large and long term investments. Additionally, agreements for the concession of land for the exploitation of forestry resources are only valid for one year (as opposed to 20 years before President Cárdenas). This has made investment in the sector rather and long term exploitation and reforestation more difficult. Other structural problems the forestry industry has to face are the high transportation costs since, due to lack of rivers, wood has to be hauled over land on trucks, mostly on small mountain roads which do not allow massive transportation. This factor significantly increases exploitation costs and makes competition with imported products difficult.

Mexico's total production of timber products, in thousands of m³ logs, between 1985 and 1989 was as follows:

PRODUCT	1985	1986	1987	1988	1989
Sawing (1)	8,082	8,808	8,137	8,840	8,907
Pulp	2,884	2,410	2,884	2,881	2,949
Posts & piles	237	173	148	184	188
Fuel	484	454	483	488	483
Shingles	278	413	348	204	182
TOTAL	8,968	8,958	8,791	8,214	8,888

(1) Includes boards, packaging wood, carved wood, wood for veneer, wood waste, pieces for sawmills and veneer and other log products.

Mexico's total production in tons of non-timber products was as follows between 1985 and 1989:

PRODUCT	1985	1986	1987	1988	1989
Resins	43,463	30,410	44,180	43,443	36,296
Fibers	6,171	7,394	6,257	6,914	3,047
Rhizome	1,970	3,912	3,129	1,388	1,081
Wax	657	2,058	1,387	1,983	1,385
Gum	186	220	392	548	834
Other	14,587	17,055	17,859	52,512	31,445
TOTAL	67,034	61,049	73,204	106,788	74,088

The decrease in production during 1989 is due to the longstanding and structural problems of Mexico's forestry sector described above, in addition to a lack of policy definitions by the central government, the trade liberalization policies, which have brought about a strong competition of imported wood products, and a decrease in technical services for the forestry sector.

4.3 TRADE BALANCE

Total imports of materials and manufactured products increased 42% during 1989, from \$444.7 million to \$631.7 million, mostly because local production was unable to cover demand due to the above mentioned factors. This upward trend in imports has been felt since 1982, when imports were at their all time low of \$176.7 million as a result of the economic crisis and the high import barriers imposed by the government at the time. Imports have steadily increased since then, although 1988 showed a slight decrease brought about by a reduction in imports of pulp and paper waste products used in the manufacture of paper.

TABLE 6
MEXICO'S IMPORTS OF WOOD AND LUMBER PRODUCTS
(000 U.S. dollars)

	1986	1987	1988	1989
RAW MATERIALS	37,512	26,349	52,260	54,059
Firewood & charcoal	239	185	2,408	2,487
Wood squared	905	1,462	2,382	2,460
Lumber with a primary process	36,368	24,702	47,470	49,112
MANUFACTURED WOOD	13,306	17,161	31,441	32,532
Boards	5,418	11,256	22,318	22,558
Other	7,888	5,905	9,123	9,974

Mexico's total production in tons of non-binder products was as follows between 1985 and 1989:

PRODUCT	1985	1986	1987	1988	1989
Resins	43,483	30,410	44,180	43,443	38,288
Esters	8,171	7,384	6,257	8,914	3,047
Resinols	1,970	3,912	2,129	1,389	1,081
Wax	657	2,088	1,387	1,983	1,355
Gum	189	220	392	248	824
Other	14,987	17,052	17,829	22,812	31,445
TOTAL	67,834	61,049	73,204	108,788	74,088

The decrease in production during 1989 is due to the longstanding and structural problems of Mexico's forestry sector described above, in addition to a lack of policy definitions by the central government, the trade liberalization policies which have brought about a strong competition of imported wood products, and a decrease in technical services for the forestry sector.

4.3 TRADE BALANCE

Total imports of materials and manufactured products increased 15% during 1989, from \$44.7 million to \$51.7 million, mostly because local production was unable to cover demand due to the above mentioned factors. This upward trend in imports has been for since 1982, when imports were at their all time low of \$7.8 million as a result of the economic crisis and the high import barriers imposed by the government at the time. Imports have steadily increased since then, although 1985 showed a slight decrease brought about by a reduction in imports of pulp and paper waste products used in the manufacture of paper.

TABLE 8
MEXICO'S IMPORTS OF WOOD AND LUMBER PRODUCTS
(000 U.S. dollars)

	1985	1986	1987	1988	1989
RAW MATERIALS	37,812	28,349	32,349	37,812	34,058
Firewood & charcoal	239	189	189	239	2,487
Wood squared	802	1,482	1,482	802	2,480
Lumber with a primary process	88,388	24,702	24,702	88,388	48,112
MANUFACTURED WOOD	18,308	17,181	17,181	18,308	32,532
Boards	2,418	11,238	11,238	2,418	22,529
Other	7,888	2,902	2,902	7,888	9,974

	1986	1987	1988	1989
MATERIALS USED IN PAPER MANUFACTURING	224,466	394,755	258,957	413,331
PAPER, CARDBOARD & THEIR MANUFACTURES	123,900	26,676	102,068	131,805
TOTAL VALUE	399,184	464,941	444,726	631,727
TOTAL VOLUME (000 m3)	2,278.9	2,806.4	1,776.2	2,277.6

Source: Memoria Económica 1989-1990
Cámara Nacional de la Industria Forestal

Mexico's exports of raw materials and manufactured products from wood were \$271 million in 1989 (1.2 million m3), down from an all time high of \$310 million in 1988. These were composed of manufactured wood products (45%), paper, cardboard and their products (36%), pulp and wood waste for the manufacture of paper (11%) and raw materials (8%). Mexico also exported \$2.9 million or six million kilograms of colophony in 1989.

4.4 MANUFACTURE

In 1989, there were a total of 2,403 plants in the forestry sector as follows:

INDUSTRY	PLANT NUMBER	INSTALLED CAPACITY million	% used	EMPLOYMT 000	INVESTMT million \$
sawmills	954	7.6 m3	76%	23.8	275.9
box manufacturers	1,182	118 units		8.6	14.5
impregnators	21	1.3 m3	40%	2.3	2.4
pulp and paper	73	4.5 ton	79%	34.7	1814.0
board lumber	49	1.4 m3	47%	11.4	720.2
resins	18	0.06 ton	63%	8.0	17.9
secondary workshops	106				

Source: Memoria Económica 1989-1990
Cámara Nacional de la Industria Forestal

The industrial transformation of wood products has operated at an average 60% of capacity, partially due to the unavailability of raw materials, the exploitation of resources below those authorized by SARH (approximately 50%), the low use of secondary products, the inefficient use of machinery and equipment and the inadequate geographical location of many industrial plants.

The largest companies operating in Mexico in the forestry, woodworking, pulp and paper sectors include the following:

Source: Memora Económica 1988-1990
 Cámara Nacional de la Industria Forestal

Mexico's exports of raw materials and manufactured products from wood were \$271 million in 1989 (1.2 million m3), down from an all time high of \$310 million in 1988. These were composed of manufactured wood products (43%), paper, cardboard and their products (36%), pulp and wood waste for the manufacture of paper (11%) and raw materials (8%). Mexico also exported \$2.9 million or six million kilograms of copalony in 1989.

4.4 MANUFACTURE

In 1989, there were a total of 2,403 plants in the forestry sector as follows:

INDUSTRY	PLANT NUMBER	INSTALLED CAPACITY (million)	# EMPLOYED (000)	INVESTMENT (million \$)
secondary workshops	108	0.08 ton	63%	17.9
plans	18			730.2
board lumber	48	1.4 m3	47%	1814.0
pulp and paper	78	4.5 ton	70%	2.4
integrators	21	1.3 m3	40%	14.6
box manufacturers	1,182	118 units		23.8
sawmills	884	7.8 m3	78%	278.9

Source: Memora Económica 1988-1990
 Cámara Nacional de la Industria Forestal

The industrial transformation of wood products has operated at an average 60% of capacity, partially due to the unavailability of raw materials, the exploitation of reserves below those authorized by SARH (approximately 50%), the low use of secondary products, the inefficient use of machinery and equipment and the inadequate geographical location of many industrial plants.

The largest companies operating in Mexico in the forestry, woodworking, pulp and paper sectors include the following:

REGULATIONS

The Mexican forestry sector is regulated by three major frameworks:
 The Mexican Constitution (Article 27)
 The Forestry Law (April 1982) and
 The Regulations to the Forestry Law (July 1988).

Additionally, the Rural District Development Law and the General Law of Ecological Balance and Environmental Protection influence decisions in this sector.

5.1 THE FORESTRY LAW

This law defines and regulates:

- The preparation and control of forestry programs;
- The administration of forestry resources;
- The integral management of forestry resources within their ecological system;
- The creation of reserves and other areas for preservation;
- The forestry related education, culture, training and research;
- The protection of forests against fire, infestations and other sanitary problems;
- The development and restoration of forestry resources and nurseries;
- The preservation, protection, certification, reproduction and distribution of seeds and vegetative material;
- The exploitation of forestry resources and technical services;
- Forestry production;
- The creation of roads and transportation infrastructure;
- The supply of raw materials to the industry;
- The proper operation of industrial plants and warehouses;
- Inspection and vigilance.

The above, within the following objectives:

- Obtaining higher yields;
- Protecting and preserving existing forestry resources;
- Maintaining high productivity levels;
- Promoting production, exports and employment in the sector;
- Promoting the industrialization of forestry resources;
- Attaining a domestic industry capable of satisfying local demand;
- Improving productivity of parastate companies in the sector;
- Promoting forestry development through incentives, tariffs and financing;
- Promoting the active participation of land owners in the production, industrialization, use and vigilance of existing resources;
- Promoting education, training and research to satisfy human capital and technological needs;
- Promoting a forestry culture among the population at large;
- Developing an integral rural development;
- Promoting the cooperation of private, public and state entities in the field.

The Secretariat of Agriculture and Hydraulic Resources (SARH) is the administrative body for the enforcement of the law and the signature of multilateral agreements. It is also responsible for the preparation of an inventory of existing resources (the most recent one was done in 1975) and of statistical data on the sector, as well as of policy guidelines and development programs for the sector. Basically, the SARH is in charge of regulating, developing and overseeing all aspects related with the exploitation, preservation and reforestation of forestry resources, as well as their distribution and industrial transformation.

Any change in the use of forestry land towards agricultural, cattle raising, urban, recreational and other uses requires the preparation of a technical and socioeconomic study to evaluate the feasibility of such a change and the conformity with existing regulations. Unless the study is approved, no such changes can be made. The

Additionally, the Forest Development Law and the General Law of Ecological Balance and Environmental Protection influence decisions in this sector.

4.1 THE FORESTRY LAW

The law defines and regulates:

- The operation and control of forestry programs;
- The administration of forestry resources;
- The integral management of forestry resources within their ecological system;
- The creation of reserves and other areas for preservation;
- The forestry related education, culture, training and research;
- The protection of forests against fire, infestations and other sanitary problems;
- The development and restoration of forestry resources and nurseries;
- The preservation, protection, certification, reproduction and distribution of seeds and vegetative material;
- The exploitation of forestry resources and technical services;
- Forestry production;
- The creation of roads and transportation infrastructure;
- The supply of raw materials to the industry;
- The proper operation of industrial plants and warehouses;
- Inspection and vigilance.

The law, within the following objectives:

- Obtaining higher yields;
- Protecting and preserving existing forestry resources;
- Maintaining high productivity levels;
- Promoting production, exports and employment in the sector;
- Promoting the industrialization of forestry resources;
- Attaining a domestic industry capable of satisfying local demand;
- Improving productivity of private companies in the sector;
- Promoting forestry development through incentives, tariffs and financing;
- Promoting the active participation of land owners in the production, industrialization, use and vigilance of existing resources;
- Promoting education, training and research to satisfy human capital and technological needs;
- Promoting a forestry culture among the population at large;
- Developing an integral rural development;
- Promoting the cooperation of private, public and state entities in the field.

The Secretariat of Agriculture and Hydraulic Resources (SARH) is the administrative body for the enforcement of the law and the signature of multilateral agreements. It is also responsible for the preparation of an inventory of existing resources (the most recent one was done in 1975) and of statistical data on the sector, as well as of policy guidelines and development programs for the sector. Generally, the SARH is in charge of regulating, developing and overseeing all aspects related with the exploitation, preservation and restoration of forestry resources, as well as their distribution and industrial transformation.

Any change in the use of forestry land towards agricultural, cattle raising, urban, recreational and other uses requires the preparation of a technical and socioeconomic study to evaluate the feasibility of such a change and the conformity with existing legislation. Unless the study is approved, no such changes can be made. The

exploitation of forestry resources is reserved exclusively to Mexican citizen and is subject to a permit granted by SARH based on "studies for integral management". This includes permanent, temporary, eventual (building a road) exploitation, and that for scientific, construction or plantation purposes. Integral management should consider the use and exploitation of forestry resources with the highest possible productivity and without damage to the environment. No permit is granted without such approved study. Additionally, SARH grants technical services to the forestry sector, mostly through concessions granted to land owners or professionals, which are in charge of overseeing the "integral management" as stipulated in the study and of conducting the exploitation of forestry resources. These services are payable by the exploitation permit holders.

5.2 REGULATIONS TO THE FORESTRY LAW

These were designed to spell out and enforce the Forestry Law in its administrative and specific aspects. It includes regulations on the following items:

- Preparation of the inventory of forestry resources by SARH;
- Preparation of the Forestry Sector Program by SARH;
- Coordination agreements with state and municipal governments, parastate companies, "ejidos", communities, social and private organizations;
- The Forestry Development Fund for the promotion of financing and investment programs;
- The division of the national territory into regions, each of which is to be managed integrally based on individual studies to be prepared with the cooperation of SARH, state and municipal governments, the private and social sector, to define areas used for forestry exploitation, reserves, reforestation, roads, etc.;
- The requirements to change the use of land from forestry to other uses, including an application and a technical study with their specifications;
- National forestry reserves and areas to be used for conservation;
- The prevention of fires and responsibilities in fighting them by the federal, state, municipal governments and land owners;
- Sanitary measures to avoid and fight infestations and other diseases in forested areas;
- The determination of closed seasons;
- The reforestation and restoration of forests by SARH;
- The exploitation of forestry resources in cold and temperate climates can be made with four methods: total cut, with father trees, with successive or protection cuts (dividing the total area and rotating the zones exploited), and with selective cuts (cutting only certain trees within the whole area). Which one is used will depend on the characteristics of the land and forest and on the integral management studies;
- The exploitation of tropical forests needs to be complemented by improvement measures such as cutting old and malformed trees, reforesting with high value species, cleaning and sanitary cuts;
- Exploitation permit holders are responsible for the regeneration of the vegetation in the exploited area;
- SARH grants all permits for the exploitation of forestry resources, change in the use of land, and collection for scientific, educational and other purposes.
- A technical study is necessary to obtain exploitation permits;
- SARH or a concessionaire of SARH will provide technical services to each region such as the preparation of the integral management studies, providing training and education in forestry related matters, supervising the application of the management studies, preparing production and distribution programs for raw materials, preparing infrastructure programs, providing information, coordinating the management studies

exploitation of forestry resources is reserved exclusively to Mexican citizens and is subject to a permit granted by SARH based on studies for integral management. This includes permanent, temporary, eventual (including a forest) exploitation, and first for scientific, construction or plantation purposes. Integral management should consider the use and exploitation of forestry resources with the highest possible productivity and without damage to the environment. No permit is granted without such approved study. Additionally, SARH grants technical services to the forestry sector, mostly through concessions granted to land owners or professionals, which are in charge of overseeing the integral management, as stipulated in the study and of conducting the exploitation of forestry resources. These services are payable by the exploitation permit holders.

8.2. REGULATIONS TO THE FORESTRY LAW

- These were designed to spell out and enforce the Forestry Law in its administrative and specific aspects. It includes regulations on the following items:
- Preparation of the inventory of forestry resources by SARH;
 - Preparation of the Forestry Sector Program by SARH;
 - Coordination agreements with state and municipal governments, parastates, companies, unions, committees, social and private organizations;
 - The Forestry Development Fund for the promotion of financing and investment programs;
 - The division of the national territory into regions, each of which is to be managed integrally based on individual studies to be prepared with the cooperation of SARH, state and municipal governments, the private and social sector, to define areas used for forestry exploitation, reserves, reforestation, roads, etc.;
 - The requirements to change the use of land from forestry to other uses, including an application and a technical study with their specifications;
 - National forestry reserves and areas to be used for conservation;
 - The prevention of fires and responsibilities in fighting them by the federal, state, municipal governments and land owners;
 - Sanitary measures to avoid and fight infections and other diseases in forested areas;
 - The determination of closed seasons;
 - The reforestation and restoration of forests by SARH;
 - The exploitation of forestry resources in cold and temperate climates can be made with four methods: total cut, with father trees, with successive or protection cuts (leaving the total area and rotating the zones exploited), and with selective cuts (leaving only certain trees within the whole area). Which one is used will depend on the characteristics of the land and forest and on the integral management studies;
 - The exploitation of tropical forests needs to be complemented by improvement measures such as cutting old and malformed trees, reforesting with high value species, cleaning and sanitary cuts;
 - Exploitation permit holders are responsible for the regeneration of the vegetation in the exploited area;
 - SARH grants its permits for the exploitation of forestry resources, change in the use of land, and collection for scientific, educational and other purposes;
 - A technical study is necessary to obtain exploitation permits;
 - SARH or a concessionaire of SARH will provide technical services to each region such as the preparation of the integral management studies, providing training and education in forestry related matters, supervising the application of the management studies, preparing production and distribution programs for raw materials, preparing infrastructure programs, providing information, coordinating the management studies.

- with infrastructure requirements, production, industrial development and sector programs, and marking the trees and vegetation to be cut;
- The creation of roads, production and distribution, warehousing, as well as industrial plants require certain permits and are subject to specific regulations in order to be allowed to operate;
 - The transportation of lumber and raw materials extracted from forests requires special permits to supervise the conformity with exploitation permits for the area.

In general terms, it can be said that the regulations are very limiting. Every aspect of forestry exploitation is subject to permits, studies and a myriad of requirements. This has made exploitation difficult and also costly, reason for which imported products are very competitive in Mexico.

6. MARKET ACCESS

Sales in Mexico are usually made through local agents and distributors, normally operating on a commission basis. Decisions should be taken on whether to use an agent, joint venturing or licensing with a Mexican company. Mexico's market is highly competitive and companies which maintain an active presence in the market and establish a good track record by virtue of product performance, competitive price and service will do well.

All suppliers of equipment or services, whether local or foreign, to a Mexican Government entity must be registered with the Secretariat of Programming and Budget (SPP) and with the Purchasing Department of the agency itself. All purchases over a specified minimum are subject to bidding.

As a result of Mexico's accession to GATT, the Mexican Government has gradually opened the economy to international suppliers. Import duties have been lowered from a maximum 100% in 1983, to 20% since December, 1988. The official import price system has been totally eliminated and import permits are required on only 325 of the total 11,950 items in the Mexican Tariff Act, none of which correspond to this industry. Mexico adopted the Harmonized System of Tariff Nomenclature on July 1, 1988.

The import conditions for forestry and woodworking machinery and equipment have improved significantly as a result of this commercial liberalization. Maximum duty rates have been reduced to 20% and prior import permits are no longer required on items in this category.

Imports of forestry and woodworking equipment are subject to a 0% to 20% ad valorem duty assessed on the F.O.B. invoice value. In addition, a 0.8% customs processing fee is assessed on the invoice value. A 15% value added tax is then assessed on the cumulative value of invoice plus the above taxes.

There are no official metric requirements applicable to imports into Mexico. However, since the metric system of units is by law the official standard of weights and measures in Mexico, importers will usually require metric labeling for packaged goods, although the English system is also used. Dual labeling is acceptable. Imported products should be labeled in Spanish containing the following information: name of the product, trade name and address of the manufacturer, net contents, serial number of equipment, date of manufacture, electrical specifications, precautionary information on dangerous

with infrastructure requirements, production, industrial development and sector programs, and making the trees and vegetation to be cut. The creation of roads, production and distribution, warehousing, as well as industrial plants require certain permits and are subject to specific regulations in order to be allowed to operate. The transposition of timber and raw materials extracted from forests requires special permits to supervise the conformity with exploitation permits for the area.

In general terms, it can be said that the regulations are very limiting. Every aspect of forestry exploitation is subject to permits, studies and a myriad of requirements. This has made exploitation difficult and also costly, reason for which imported products are very competitive in Mexico.
